COPYRIGHT

To HIS HIGHNESS THE DUKE OF TECK, G.C.B., G.C.V.O., THE
VISCOUNT IVEAGH, K.P., AND THE SPEAKER OF THE
HOUSE OF COMMONS, *Governors of King Edward's
Hospital Fund for London.*

Sirs,

We have the honour to submit the Eleventh Annual Statistical Report, prepared by Mr. Maynard from the published accounts of one hundred and six London Hospitals and from Returns made to the Fund.

These Hospitals consist of:—

18 General Hospitals which had an average of over 100 beds in daily occupation during 1913.

15 General Hospitals which had an average of under 100 beds in daily occupation during 1913.

3 Consumption Hospitals.

5 Hospitals for Women.

6 Hospitals for Children.

5 Ophthalmic Hospitals.

3 Hospitals for Epilepsy and Paralysis.

13 Cottage Hospitals.

7 Lying-in Hospitals.

31 Unclassified Hospitals.

106

The Hospitals dealt with in the Report taken together provided a total of 9,171 beds in average daily occupation in 1913. The total number of In-patients admitted during that year was 134,749, while 1,329,567 patients attended at the Out-patient Departments.

The total ordinary expenditure during the year at these Hospitals, including Maintenance, Administration, Rent, Rates and Taxes, but excluding capital expenditure, and interest on borrowed money, amounted to £1,058,898.

Were it not for the grants made by this Fund and the Metropolitan Hospital Sunday and Hospital Saturday Funds, the Income of these Hospitals from all sources, even after including all legacies received during the year, would fall considerably short of this large annual expenditure.

We regret that the increase in the cost per bed occupied and per attendance of Out-patients, first noted in 1911, has continued; the addition in 1913 representing about £27,000.

The Report again refers to the circumstances which have been previously noted as tending to raise the expenditure, and attention is also drawn to the fact that the continued increase in cost is not necessarily attributable to a disregard of that economy which, in previous years, had created very large savings. It is to be noted, moreover, that the increase in cost shown this year is not shared by all the groups of Hospitals dealt with in the Report, nor by all the individual Hospitals in the groups that, collectively, show an increase.

In determining whether the rise of cost at a particular Hospital is justifiable, the question whether such rise is greater or less than the average increase amongst comparable Hospitals generally, is obviously of great importance. For this purpose the special Table on pages 12 and 13 should prove particularly useful.

We wish to emphasise the fact that throughout the Report the comparisons of cost are made with the average, and that it is not suggested that the lowest cost is of necessity to be held up as a model.

It is not the object of these Reports in any way to discourage expenditure that is held to be necessary in carrying on the work of the Hospitals, nor such increases of expenditure as result from modern discoveries or from the efforts continually being made to improve the quality of the work and its range. The object is to assist the Hospitals to discover and check, where it exists, any tendency to wasteful or unnecessary expenditure, and thus to enable a still larger proportion of the funds at their disposal to be directed to the maintenance or increase of efficiency.

We have the honour to be, Sirs,

Your obedient servants,

SAVILE CROSSLEY,

JOHN G. GRIFFITHS,

Honorary Secretaries.

August 5, 1914.

SUPPLEMENTS.

(Privately circulated for the use of Hospital Officials only.)

1. Lowest prices being paid on December 31, 1913, in each of one hundred and nine Hospitals for fifty-three different articles. (Circulated in March, 1914.)
2. Hospitals in order of cost, 1913.

PREFATORY NOTE.

THE Statistical Report deals this year with the expenditure in 1913 of 106 Hospitals. These include nearly all the Hospitals which apply for grants from the Fund, as well as some others which very kindly supply the necessary information, and thus enable this Report to be more complete than it would otherwise be.*

Objects and Methods of the Report.

The object of the Report is to assist Hospitals in controlling their expenditure, and thus in ensuring that as large a proportion as possible of their available funds is devoted to the purpose of maintaining and improving the efficiency of their work. The method adopted in the Reports is to compare the expenditure at each Hospital with the expenditure at other Hospitals, and with the average of those Hospitals with which it is most comparable.

It is not suggested, however, that the lowest expenditure is intended to be taken as a model. All the comparisons are with the average, and even so the Report must not be assumed to be a condemnation of all excesses above the average. It only sets them out as matters for investigation on the part of those concerned.

For the purpose of making the comparisons as fair as possible to the various Hospitals and as useful as possible as an aid to the control of expenditure, the following special principles are observed in the preparation of the Reports:—

(a) The comparisons are limited to the items of expenditure which are the more capable of control. Certain items are thus excluded, sometimes because they are liable to wide and unavoidable variations as between one year and another or between one Hospital and another, sometimes because they cannot readily be modified by the Hospital Committees. These include the following, viz.: Repairs and other Establishment Charges, Official Salaries and Pensions, Finance, and Rent, Rates and Taxes.† It will therefore be borne in mind that wherever in this Report a total or an average cost per bed or per out-patient attendance is stated,‡ the figure is exclusive of the above mentioned charges, and that variations in the figures cannot be explained by reference to variations in these items.

(b) The Hospitals are, as far as practicable, arranged in groups, so that the comparisons may be between Hospitals whose work is more or less closely comparable, and the group system is followed in all calculations of averages. This is not intended to prevent comparisons between Hospitals in different groups, a process for which, in fact, special facilities are provided in the preliminary alphabetical tables on pages 26 to 31. In the case of Hospitals which cannot be arranged in groups, the comparisons are confined to the preliminary tables and no averages are calculated.

(c) The comparisons are made not only for the total expenditure on the various controllable items put together (Table VI. of each group), but

* See note 19 on page 105.

† Tables containing all the expenditure except Rent, Rates and Taxes can be found in the published Annual Reports of the individual Hospitals.

‡ Except to some extent in the comparisons of laundry cost. See the note at the head of Section III. on page 98.

also for each of the main sub-heads of expenditure separately, viz.: Provisions, Surgery and Dispensary, Domestic, Salaries and Wages (maintenance); and Management other than Official Salaries and Pensions (Tables I. to V.) This sub-division is intended to facilitate the discovery of the source of any excess which seems to require justification. It must be borne in mind, however, that Hospitals where direct labour is employed to carry out work (such as, for example, the manufacture of drugs), which at other Hospitals is paid for in the purchase price, will show a proportionately larger expenditure on Salaries and Wages and a correspondingly smaller expenditure on [say] Surgery and Dispensary or whatever the special heading may be.* Differences due to this cause cancel out in the comparisons of total expenditure.†

The group tables are preceded by general alphabetical tables giving particulars of work done, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year) for all the institutions. This introductory section now forms in itself a very nearly complete statistical record of these figures for all the Hospitals of London which observe the Revised Uniform System of Accounts.‡

The group tables are followed by a special section dealing with the cost of Hospital laundries as compared with the cost of washing not done on Hospital premises. This is followed by a short section on Prices, and the Report concludes with notes, partly added by the Fund itself and partly supplied by the Hospitals.

A list of the Hospitals in order of cost per occupied bed, cost per out-patient attendance, and cost of the two departments combined, has been prepared as a supplement for the use of the Fund and for private circulation to the Hospitals concerned.

In drawing conclusions from any of the tables it must be understood that they profess to give only the material for a comparison of outlay, and the question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. For this purpose many considerations must be taken into account which will readily occur to those concerned in Hospital management. There may be differences in efficiency or in unavoidable circumstances, as well as in economy of management. Most of these considerations cannot be expressed in statistics at all; others could not be included in a manageable form in a report dealing with 106 Hospitals. This Report will have served its purpose if it stimulates inquiry into the causes of excessive cost and assists Hospital Managers to see in what departments the source of the excess is to be found, and to reduce it wherever it cannot be justified.

Increases or decreases in Hospital Expenditure in 1913 as compared with 1912.

The following table gives the necessary particulars for a comparison between 1912 and 1913, and it will be seen that, taking one hundred and one

* Only in the case of laundry staff and staff employed on annual cleaning or establishment renewals and repairs is this source of difference removed by transfers made in the course of preparing the Report (see note 15 on page 104).

† Except that in the case of articles purchased the cost includes an allowance for various expenses incurred by the seller (e.g. Rent, Rates, Establishment, Depreciation, etc.) which are not included in this Report in the case of work done on the premises.

‡ See note 20 on page 105.

Hospitals* together, out of the one hundred and nine dealt with in last year's Report, there is an increase in cost representing a sum of about £27,600:—

			Net Totals		+ 13,808	+ 13,771	+ 27,579

Particulars of the changes in the numbers of occupied beds and of out-patient attendances have as usual been added, so that the influence of this element on changes in cost may be allowed for. The question of the bearing of changes in the number of beds (which, if permanent, may frequently be both a result and a cause of changes in cost per bed) was dealt with in the prefatory note to the Report for 1906. The cost per out-patient attendance is doubtless particularly liable to fluctuations through accidental changes in the numbers dealt with. Various methods of testing the importance of these factors in any given case were discussed in the Report for 1909.

* Besides the Hospitals excluded for various reasons from the averages for 1912 or 1913 and consequently from the above comparisons, the *London Lock (Male) Hospital* has been omitted from the Unclassified Hospitals on account of the Hospital being closed for rebuilding during a great part of the year. Cases of temporary reduction in the number of beds, if on a small scale or for a short period, have not been omitted, as it is probable that, taking a large number of Hospitals together, these would be distributed fairly evenly as between one year and another.

† As a result of the omission of the Hospitals mentioned in the preceding note, these averages do not always correspond with the group averages given in Section II. of the Report.

It is, of course, a matter for regret that the Statistical Report has again to record, instead of the decreases in cost which were the unbroken rule between 1903 and 1910, an increase in total expenditure. In view, however, of the continued increase in the number of special and costly treatments, and of the general tendency to a rise in prices, it must not be too hastily assumed that this increase necessarily implies any diminution in the attention devoted by the Hospitals to economy, or that it nullifies the benefit derived from the very large reductions recorded in the earlier Reports.

At the same time it must be borne in mind that while the factors in question may be responsible for a rise in average cost, they do not necessarily explain the increase at any particular Hospital, or the extent to which at some Hospitals the cost exceeds the average of the group of comparable institutions. It will be observed, for instance, that in spite of these influences some of the groups show decreases or only very small increases, and it will be found that in the groups which show increases this feature is not common to all the Hospitals in the group.

As some assistance to Hospital Managers and others interested in comparing the cost at any particular Hospital with the average cost, the following table has been prepared, analysing the increases in each group, both for cost per bed and for cost per out-patient attendance. Similar figures for any individual Hospital can readily be obtained from Section I., Table III., on pages 26 to 31, in comparison with the corresponding table in last year's Report, and provision is made for the insertion of such figures in manuscript:—

NOTE.—Hospitals not showing two complete years' working have been omitted from the above table; and the averages here shown sometimes differ for this reason from those given in the group tables in Section II. of the Report. Cf. the note at the foot of page 11.

* These lines are provided for the insertion in manuscript of the corresponding figures relating to any Hospital the cost of which the reader desires to analyse, and the relevant figures, taken from Section I., Table III., on pages 26 to 31, and the corresponding table in last year's Report, have been inserted in the copies sent to the several Hospitals applying for grants from the Fund. Attention is again called to the fact that these figures do not include Structural Renewals or Repairs, which are specially liable to unavoidable variations between one year and another and between one Hospital and another.

NOTE.—Hospitals not showing two complete years' working have been omitted from the above table; and the averages here shown sometimes differ for this reason from those given in the group tables in Section II. of the Report. Cf. the note at the foot of page 11.

* These lines are provided for the insertion in manuscript of the corresponding figures relating to any Hospital the cost of which the reader desires to analyse, and the relevant figures, taken from Section I., Table III., on pages 26 to 31, and the corresponding table in last year's Report, have been inserted in the copies sent to the several Hospitals applying for grants from the Fund. Attention is again called to the fact that these figures do not include Structural Renewals or Repairs, which are specially liable to unavoidable variations between one year and another and between one Hospital and another.

It will be observed that although, naturally enough, the greatest part of this total increase of £27,579 is attributable to the Larger General Hospitals, owing to the scale of their combined work, by far the greatest increase in cost per bed and per out-patient attendance occurs in the group of Consumption Hospitals. Taken in detail, the largest increases will be found in Salaries and Wages at the Consumption Hospitals and the Lying-in Hospitals and (to a smaller degree) at the Larger General Hospitals and Hospitals for Women; in Provisions at the Consumption Hospitals; and in Domestic at the Smaller General Hospitals.

Further analysis must be left to those directly concerned. The object of this Report is to place the facts in a convenient form at the disposal of those interested in Hospital management and thus to facilitate enquiry where on the figures it seems to be desirable. The Fund is much indebted to the officials of the various Hospitals for the care and trouble taken in supplying the necessary information.

H. R. MAYNARD,

Secretary.

August 5, 1914.

* The figures in these columns are arrived at by adding together

The small figures refer to the notes on pages 103 to 109, and before drawing conclusions from any of these
(a) I.e. amount by which the actual expenditure at each Hospital on In-patients and Out-patients combined is greater or less
(b) I.e. percentage Attention is drawn to the fact that comparisons are drawn with the average cost.

TABLE VI.

89,819	3,158 6 7	Average: 8.44	—	—	—	—	—	—

the amounts in the corresponding columns of Tables I. to V. Tables general reference should be made to these notes and also to the notes to Tables I. and III. than the expenditure which would have been incurred had the Hospital been worked at the average cost per bed and per attendance. No suggestion is made that the lowest is intended to be taken as a model.

the amounts in the corresponding columns of Tables I. to V. Tables general reference should be made to these notes and also to the notes to Tables I. and III. than the expenditure which would have been incurred had the Hospital been worked at the average cost per bed and per attendance. No suggestion is made that the lowest is intended to be taken as a model.

SECTION III. LAUNDRY EXPENSES.

ANALYSIS OF COST OF WASHING AT 104 HOSPITALS FOR THE YEAR 1913.

NOTE.—In order to enable the cost of washing at Hospitals with laundries to be compared with the cost at Hospitals which send their washing out, the whole cost of the laundry is taken into account. The figures given below for cost per bed at Hospitals with laundries include, therefore, various items (such as repairs, insurance, depreciation, interest on capital, and rent, rates and taxes) which for the reasons stated in the prefatory note are omitted from the tables of cost per bed &c. in the earlier sections of the Report.

SECTION IV.

PRICES.

TABLE showing the highest, the most often quoted and the lowest of the prices returned as the lowest which were being paid on December 31, 1918, for fifty-three different articles in use by the 106 hospitals dealt with in this Report.

These figures are taken from a document entitled "Lowest Prices," which was printed for private circulation earlier in the year amongst the Hospitals contributing to the list. The figures set out below are taken from this private document and indicate the range of the prices returned by the various hospitals.

The circumstances under which goods were purchased, the quantities and qualities, the date and length of contract, and conditions of delivery would have to be taken into consideration before assuming that any particular price was obtainable by every institution. It must be remembered also that throughout the Statistical Report the comparisons are based on the average and not on the minimum. The figures are only printed for the purpose of indicating to Hospitals whose cost is such as to suggest the desirability of investigation, a possible line of enquiry. To facilitate such enquiry amongst the Hospitals contributing to the list, a good deal of information as to qualities, quantities, contracts, is available for inspection, by the authorised representatives of those Hospitals, at the offices of the Fund.

* In co-operation with other Hospitals.

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

Where no entry appears the Hospitals are unable to divide their beds under these headings.

The Royal London Ophthalmic returns the number of beds as 188, 20 being empty.

(2) In the case of *St. Thomas's Hospital* the 88 paying beds, although included in the total number of beds in the Hospital, namely 630, are not included in the average number of beds in daily occupation, namely 548. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them.

(3) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and others is based on figures supplied by the Hospitals; but the varying proportions of casualties to others suggest that the definition of a casualty differs in different Hospitals.

(4) The *Eltham and Mottingham Cottage Hospital*, the *Finchley Cottage Hospital*, the *Horsey Cottage Hospital*, the *Nelson Cottage Hospital*, South Wimbledon, the *Passmore Edwards Cottage Hospital*, Willesden, the *Passmore Edwards Cottage Hospital*, Wood Green, the *Wimbledon Hospital*, and the *Woolwich and Plumstead Cottage Hospital*, although having no general Out-Patients' Department, treat a small number of casualties, the cost of these cases being included in that of the In-patients.

(5) The *Clapham Maternity Hospital* treats a small number of Out-patients at the In-patient Department at Clapham, and the cost of these Out-patients is included in the cost per bed.

(6) The work at *King's College Hospital* was carried on under exceptional conditions in 1918, owing to its removal to South London, the figures for this hospital, therefore, have been excluded from the various Tables of Group I. as not being comparable with those of other Hospitals.

(7) The *London Lock (Male) Hospital* having been closed during a great part of the year for rebuilding, and the number of occupied beds having consequently been considerably reduced, the figures for this hospital have been excluded from Section I., Table III.

(8) *Consumption Hospitals* :—The figures relating to the Country Branch of the *Hospital for Consumption* are not included in this Report.

(9) *Lying-in Hospitals* :—The figures relating to the Training Schools of the various hospitals in this group are not included in this Report.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of *St. Vincent de Paul*. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages in Group II., Table IV.

(11) The *Passmore Edwards Cottage Hospital*, Acton, includes £201. 6s. 5d. cost of District Nursing Institution, Invalid Kitchen, and Dispensary, in the Income and Expenditure Account, making the necessary deductions from the Statistical Tables of In-Patients and Out-Patients upon which the various Tables in this Report are based. This amount is not included in this Report.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 15 and 20 below).

(13) *Provisions.*—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. The nurses, however, in some cases return to the wards after taking private cases, and during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic.*—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," "Establishment Charges," and "Rent, Rates and Taxes," as shown in the washing returns published by these hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. (See Section III. for comparison of cost of washing taken by itself, including the charges for depreciation and interest.)

(15) *Establishment and Salaries and Wages.*—Comparisons of cost in the separate Tables I. to V., and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences in the separate tables cancel one another in the general Table VI.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses.*—Tables V. of each Group show the Total Management Expenses divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain hospitals the patients are required, unless too poor, to provide certain articles of food. These are as follows: *London Homœopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *Middlesex*, tea and sugar; *University College*, tea and sugar.

(18) The totals and general averages corresponding to the columns marked (a) in Section I., Table I., for the different groups of Hospitals, excluding those Hospitals that have been omitted for various reasons, are as follows:—

Group	Beds		Average number of days each patient was resident	Total new Out-patients	Total Attendances	Average number of Attendances per Out-patient
	Total	Average number in daily occupation				
I. Larger General ...	5,157	4,565-19	22-74	749,719	2,616,712	3-49
II. Smaller General ...	976	790-21	22-59	194,597	560,211	2-88
III. Consumption ...	588	548	63-55	15,720	84,749	5-89
IV. Hospitals for Women...	284	259-43	22-72	19,430	76,826	3-93
V. Children's ...	688	619-70	24-55	127,095	399,326	3-14
VI. Ophthalmic ...	242	209-15	16-28	98,995	283,656	2-87
VII. Hospitals for Epilepsy	282	258-1	57-79	7,105	89,819	12-64
VIII. Cottage... ..	317	217-69	23-08	5,218	26,469	5-07
IX. Lying-in ...	293	192-84	14-41	5,762	76,692	13-31
Unclassified Hospitals ...	1,708	1,879-40	—	91,895	423,642	—
Totals	10,535	9,034-71	—	1,315,536	4,638,092	—

(19) The issue of these Reports was begun by Mr. J. Danvers Power with the figures of 16 Hospitals for 1908. But the earlier ones contained confidential matter, and the first Report published was that for 1908. A discussion of the objects and principles of the Reports may be found in the Prefatory Note to the latter.

(20) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a book issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 28 Farnival Street, Holborn, E.C. (8rd edition, August 1914, price 1s. 9d. post free). The System was drawn up by the three Funds after reports on the subject by Mr. John G. Griffiths, F.C.A., and a Committee of Hospital Secretaries.

NOTES RELATING TO THE ITEMS DEALT WITH IN THIS REPORT PRINTED IN COURTESY
TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE KINDLY SUPPLIED.

(21) *Bolingsbroke Hospital*.—"Although the cost of provisions is higher there has been a further reduction in the weekly cost of each In-patient, and it is hoped that this will be maintained."

(22) *Central London Throat and Ear Hospital*.—"Greater increase in cost of 'Drugs,' 'Dressings,' 'Instruments.'"

"Drugs accounted for by greater and extended use of Serums, Vaccines and '606.' The last named itself an important and a costly item."

"Dressings accounted for by a larger number of In-patients."

"Instruments accounted for by a fuller equipment having been made."

(23) *Finchley Cottage Hospital*.—"The decrease in expenditure shown in the year 1912 has been more than maintained in 1913, the cost of Maintenance being £58 less than in 1912 and £254 less than in 1911, in spite of an increase of 21 patients over the number in 1912 and of 48 over the number in 1911. The comparative saving last year was practically £100. This economy has resulted in a reduction of the cost per patient per week, from £1. 15s. 9d. in 1911 to £1. 8s. 5d. in 1912 and to £1. 7s. in 1913. These figures are shewn in the table on page 7 of the Annual Report."

(24) *Hampstead General Hospital*.—"The Out-patients' Department was transferred from the old premises of the North-West London Hospital to the new building in Bayham Street on the 1st October, 1912."

"The efficient maintenance of a separate Department for Out-patients, 1½ miles from the main building, is more expensive than if the departments were adjoining, as a distinct medical and domestic staff has to be provided."

(25) *Hospital and Home for Incurable Children—Washing Return*.—"The washing account averages £2. 10s. weekly. The average weekly bill is:

450 articles	£1	4	0
Staff	£1	0	0
Large sundries	£0	6	0
Total	£2	10	0

(26) *Kensington and Fulham General Hospital*.—"Owing to the small number of beds in proportion to the Out-patients treated it is almost impossible to keep a separate account of the expenditure. Records are now, however, being kept which it is hoped in future will permit an accurate division of the expenditure."

(27) *King's College Hospital*.—"The cost per patient was abnormally high owing to the exceptional conditions under which the work of the Hospital was carried on during 1913."

"The old Hospital was closed on the 15th July, and a portion of the new buildings, consisting of the Casualty Department and two Wards (56 beds) was opened on the 18th October. The Out-patient department and four more Wards, containing 96 beds, were opened on the 10th November."

(28) *London Fever Hospital*.—"The cost per bed must necessarily be high in this Hospital for the following reasons among others."

"Infectious fevers are not constantly with us—their prevalence comes in waves—sometimes several in the course of a year. At one time there may not be more than 40 or 50 Patients in the Hospital, at another there will be 140 or 150 or even more. Hence for a part of the year many beds are vacant. A non-infectious hospital usually keeps its beds full all the year round. One of the size of the London Fever Hospital would probably pass 1,500 patients through its wards in a year, dividing its total cost by that number of patients."

"We have to be prepared at all times for a rush of Patients, and the standing charges (which include a seasoned nursing staff) are always the same. Our numbers of Patients vary

from 600 to 800 yearly, which number, divided into the total expenditure, would show double the cost per head compared with the non-infectious hospital quoted above."

(29) *London Homœopathic Hospital—Nursing*.—"We have no paying probationers, therefore no 'Fee' to reduce nursing cost."

"There has to be a larger number of Nurses on the Staff than in Hospitals with Medical Schools. The Nurses of the Hospital do the work (dressings, etc.) done by Students in Hospitals with Medical Schools."

"The Hospital does not employ Ward Maids, the work being done by Scrubbers. The amount is included under Domestic Wages, instead of Nursing, making Domestic Expenses higher."

"Domestic Wages.—Include Scrubbers' Wages."

"The male servants are not boarded at the Hospital, but are paid extra wages in lieu of food: therefore Domestic Wages are more, Provisions less."

"Provisions.—The Patients' and Nurses' fare is of the best and on a most liberal scale, there being no limit to the amount they may consume."

(30) *Metropolitan Hospital*.—"Patients are not called upon to provide themselves with anything required for their treatment—not excluding Tea, Butter, &c., or any article of food."

"Special provision is made for Jewish Patients, Jewish Cook, Jewish Kitchen, and Jewish Wards."

"Two top Wards, containing 86 beds, are still used for the housing of the Nurses."

"The proportion of Nurses is large because there are no Students."

"The number of Resident Medical Officers is also large for the same reason."

(31) *National Hospital for Diseases of the Heart*.—"It should be noted that the Hospital in Soho Square was closed for the reception of Out-patients from the 16th December and for In-patients from the 20th November, owing to removal to the new Hospital in Westmoreland Street."

(32) *Paddington Green Children's Hospital*.—"In-patient Department. *Re Milk*.—The Medical Committee of this Hospital being of opinion that the supply of Milk for the Patients in the Wards should continue to be obtained from special Laboratories, the extra cost of milk, due to this fact, in 1913 was £40. 2s. 4d."

"Out-Patient Department. *Re Cost of each Out-patient Attendance*.—The supplies of medicines, surgical dressings, &c., given to Out-patients were as follows:

Supply for	7 days	14,520	=14,520
"	14	"	18,980=37,960
"	21	"	6,046=18,138
"	28	"	3,624=14,496
	48,170	85,114	=week supplies.

Advice and treatment 6,774

Total attendances as registered 49,944

(33) *Poplar Hospital*.—"Please note in regard to the cost of Out-patients that we do not make any Patients coming to the Casualty Department *Medical* Out-patients. Our Out-patient Department, as distinguished from the Casualty Department, treats *Surgical* Out-patients only."

(34) *Queen Charlotte's Lying-in Hospital*.—"The increase in the cost per In-patient and the cost per Out-patient for the year 1913 is entirely accounted for by the diminution in the number of patients brought about by the operation of the National Insurance Act (Maternity Benefit)—see Report of Committee of Management, page 9—for while with a reduced number of patients there will be less expenditure on some items—such as provisions, for example—the bulk of the expenditure will not be affected by a reduction in the number of patients."

"If there had been the same number of In-patients in 1913 as in 1912 and if the expenditure on provisions had been the same in 1913 as in 1912 (i.e. £1,584 instead of £1,805), the cost per In-patient per week would have been £1. 16s. 7d. instead of £2. 0s. 4d."

"Similarly if the number of Out-patients (women delivered at home) in 1918 had been about the same as in 1912, the cost per patient and per attendance in 1918 would have been less instead of more than in 1912.

"Included in the cost per In-patient is the expenditure of the Department for the examination of patients (both In and Out) before labour. This Department has developed considerably of recent years, and the expenditure on the Department during 1918 is estimated at £184. The number of patients examined during the year was 1,600, and the number of examinations was 2,100. If the amount £184 be deducted from the cost per In-Patient, the amount per week would be reduced by 11d."

(35) *Royal Free Hospital*.—"The Maternity Department has been credited for the first time with the full number of attendances."

(36) *The Royal Hospital for Diseases of the Chest*.—"Salaries and Wages.—The Expenditure under the sub-heading 'Medical' includes a sum of £806. 11s. 2d. being the amount of honorarium paid to the members of the Medical Staff.

"Beds (80) During 1918 each of the three Wards was closed for a fortnight for cleaning purposes. This reduced the daily number of available beds from 80 to 76. In addition to this 8 beds (one in each ward) are always kept vacant daily for the reception of 'Emergency' Cases, which further reduces the daily number of available beds to 78.

"Average Cost of each Out-patient.—The enlargement of the Out-patient department, which has entailed increased cost of maintenance, and the diminution in the number of new Out-patients during 1918 as compared with the previous year, accounts for the increase in the average cost per Out-patient."

(37) *St. George's Hospital*.—"Strict supervision has been exercised over the expenditure of each Department compatible with the proper treatment of Patients.

"All provisions, including tea, sugar, and butter, are supplied to the Patients quite free.

"When Patients are unable to provide for their personal washing being done, the Hospital has it done for them."

(38) *St. Mary's Hospital, Paddington*.—Extract from the Annual Report—Expenditure.—"The year witnessed a material increase in the expenditure, an increase not confined to a few items or due to any special or passing conditions, but one spread over the whole expenditure of the Hospital, and of a character bearing every appearance of permanence.

"A greatly enlarged Casualty Department and Resident Medical Officers' Quarters, a large new Clinical Laboratory, and other improvements of lesser dimensions, involved heavy additional expense for lighting, heating, supply of hot water, cleaning, and other charges.

"Increases of staff in the Pathological Department, and considerable increases of salary for the Officers already there, greatly augmented the amount of Salaries and Wages, a head of expenditure which was further increased by the appointment of an additional Surgeon and Porter in the Casualty Department, by an addition of five to the Nursing Establishment, and by the appointment of an attendant in the new Clinical Laboratory. Of course these additions to the Staff were inevitably attended by increases in the cost of upkeep generally.

"Combined with these causes was the undoubtedly greater intensity of the work of the Hospital as distinguished from the mere number of patients, and the constantly increasing costliness of modern treatment. Evidence of these is afforded by the increase in the number of operations, 2,813 in 1918 compared with 2,137 in 1911; of clinical investigations by the staff of the Pathological Department, 1,348 in 1918, compared with 925 in 1911: of X-ray examinations, 8,655 in 1918, compared with 2,781 in 1911, by the fact that one drug alone (Salvarsan) was responsible for an additional expenditure of £60, and by the greatly increased prevalence of special diets in the dietary of the patients.

"The National Insurance Act was responsible for the addition of some £130 to the expenditure, in Employers' Contributions, beside the expense of an additional clerk to perform the extra clerical work which it entailed.

"The whole question has recently been carefully investigated and reported on to the Board by the Honorary Auditors and the House and Finance Committee, and the Board are satisfied that the increases of Expenditure to which attention is now drawn are due chiefly to the above causes and to others of similar character, and not to extravagance or waste or other preventable causes. The efforts of the Board to maintain the utmost economy of expenditure consistent with efficiency have not been and will not be relaxed."

(39) *St. Mary's Hospital for Women and Children*.—"The increased cost for each Out-patient and Out-patient attendance is largely due to the following reasons:—

(i.) "A reduction in the number of applicants, causing certain standing or fixed charges to be borne by a smaller number.

(ii.) "The inability to obtain a Junior Reserve Medical Officer, necessitating the employment of Locum Tenentes for a large part of the year."

(40) *University College Hospital*.—"A further rise in the prices of Provisions and Coal and the opening of the Male and Female Phthisical Wards may be given as reasons for the increases under these headings."

(41) *Woolwich and Plumstead Cottage Hospital*.—"The Governors wish to draw particular attention to the matters of expenditure referred to in their Report to the subscribers and in the footnote to the Statistical Tables. It will be seen from this Report that certain items of exceptional expenditure (including (a) the provision of new and modern bedsteads and provision of a larger stock of bed linen; . . . (c) linoleum stair covering with rubber nosings have been laid) have been paid during 1918 out of current income and this had the result of increasing the cost.

"The Governors also direct attention to the fact that they have no Out-patients department so called, yet a number of minor cases are dealt with in the Surgery and by the Doctors which inevitably increases the cost, the whole of which is for statistical purposes borne by the In-patients.

"The expenses of management are high by reason of the incorporation of the Association under the Companies (Consolidation) Act 1908 which has now been carried out and concluded. This is of course a non-recurring expenditure."

To HIS HIGHNESS THE DUKE OF TECK, G.C.B., G.C.V.O., THE
VISCOUNT IVEAGH, K.P., AND THE SPEAKER OF THE
HOUSE OF COMMONS, *Governors of King Edward's
Hospital Fund for London.*

SIRS,

We have the honour to submit the Twelfth Annual Statistical Report, prepared by Mr. Maynard from the published accounts of one hundred and eight London Hospitals and from returns made to the Fund.

These Hospitals consist of:—

- 11 General Hospitals with Medical Schools which had an average of over 100 beds in daily occupation during 1914.
- 8 General Hospitals without Medical Schools which had an average of over 100 beds in daily occupation during 1914.
- 14 General Hospitals which had an average of under 100 beds in daily occupation during 1914.
- 3 Consumption Hospitals.
- 6 Hospitals for Women.
- 6 Hospitals for Children.
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 13 Cottage Hospitals.
- 8 Lying-in Hospitals.
- 31 Unclassified Hospitals.

108

The Hospitals dealt with in the Report taken together provided a total of 8,963 beds in average daily occupation in 1914. The total number of In-patients admitted during that year was 134,025, while 1,321,104 patients attended at the Out-patient Departments.

The total ordinary expenditure during the year at these Hospitals, including Maintenance, Administration, Rent, Rates and Taxes, but excluding capital expenditure, and interest on borrowed money, amounted to £1,081,162.

On this occasion, the results of Hospitals to which Medical Schools are attached are for the first time stated separately from those relating to Hospitals working without Medical Schools: this rearrangement has been made at the suggestion of some of the Hospitals and we think it will now be easier to compare the expenses of Hospitals of a similar character with each other, as well as with those which work on different lines.

The total expenditure again shows a small increase over that of the preceding year, while, on the other hand, the number of available beds has been slightly reduced, and the patients treated both in beds in the Hospitals and in the Out-patient Departments are somewhat fewer.

The grants made by this Fund and by the Metropolitan Hospital Sunday and Hospital Saturday Funds have again very materially added to the available resources of these Hospitals which, although all legacies received have been included in the income, would, but for the assistance of these Funds, have fallen much below the necessary expenditure.

Amongst the In-patients treated during the year are included 5,478 naval or military patients (chiefly wounded soldiers), being the number admitted by understanding with the Authorities during the last few months of 1914. A very much larger number of such patients are being treated in the London Voluntary Hospitals during the year 1915.

The wholly exceptional circumstances under which the London Hospitals had to carry on their work during the latter part of 1914 would render comparisons with previous years of little value. The cost of working was affected in Hospitals generally by the rise of prices and the difficulties created by the departure for Military and Red Cross duties of members of the medical, nursing and administrative staffs; while at many Hospitals the number of occupied beds (which has a considerable effect on the cost per bed) was affected either by beds being added for the use of the wounded or by beds being kept vacant in readiness for their accommodation at short notice.

After careful consideration of the exceptional circumstances of the latter part of the year 1914, it has been decided to omit, on this occasion, all comparisons with previous years; and all calculations based on the difference between the results of working at individual Hospitals and the average cost have therefore been omitted. The figures of the cost of each Hospital and the average cost of each group are given, so that the effect of the conditions arising out of the war may be ascertained, and Hospital Managers may, by reference to the tables, be assisted in maintaining control over expenditure.

We appreciate the value of comparative yearly statistics too highly to omit them willingly; but we believe that no valuable results would be shown, and no advantages would be gained, by comparing the results of 1914 with those of any previous year.

It is hardly necessary to add that at a time when, as at present, exceptional circumstances have occasioned considerable increase in the cost of working, the necessity of preventing any increase that can be avoided is more than ever urgent and the expenditure at the London Hospitals (where a high standard of efficiency is essential and is generally attained) will, we feel sure, be carefully controlled and will continue to receive the attentive consideration of the Fund.

We have the honour to be, Sirs,

Your obedient servants,

FREDERICK M. FRY,

JOHN G. GRIFFITHS,

Honorary Secretaries.

August 30, 1915.

(Circulated in April, 1915.)

PREFATORY NOTE.

THE Statistical Report deals this year with the expenditure in 1914 of 108 Hospitals. These include nearly all the Hospitals which apply for grants from the Fund, as well as some others which very kindly supply the necessary information, and thus enable this Report to be more complete than it would otherwise be.*

Special Circumstances of 1914.

The circumstances of the Hospitals during the latter part of 1914 were so exceptional that it has been thought desirable to modify the form of Report to a considerable extent. In the first place, the outbreak of war was followed by a rise of prices which was particularly marked in the case of many articles usually obtained from abroad, and of many articles greatly in demand for the military medical service. In the second place, the work of the Hospitals and the cost of that work was affected by the withdrawal of many of the medical, nursing, and administrative staffs for various forms of war service. In the third place, the action of a large number of the Hospitals in placing beds at the disposal of the Authorities for the treatment of sick and wounded soldiers or sailors resulted in variations in the average number of occupied beds sufficient in some cases to affect appreciably the cost per bed. At some of these Hospitals the number of beds in average occupation was increased by the addition of beds specially provided for the naval or military patients. At others the number was reduced by the necessity of retaining unoccupied, so as to be ready for the accommodation of wounded at the shortest notice, beds the use of which had been offered to the Authorities and accepted by them. These variations affect the figure which forms the divisor in the calculations of cost per bed, without at the same time affecting to anything like the same extent the figure of expenditure which forms the dividend. They therefore tend to produce variations in the cost of working, sometimes in the direction of a decrease, sometimes in that of an increase.

On the whole there has been a general increase in cost combined with a decrease in the number of occupied beds. It would be quite possible to express the total value of this increase in cost by the same method as has been adopted in previous Reports—namely, by working out the average difference in cost per bed and multiplying this by the total number of beds. This would give the amount by which the cost of that number of beds in 1914 exceeded the amount which the same number would have cost if worked at the same rate as in 1913. But this figure,

* See note 19 on page 81.

which serves as a useful measure of total changes in cost under ordinary circumstances, would be comparatively valueless when the cost is affected by changes in the number of beds due to causes quite outside the ordinary circumstances of the Voluntary Hospitals.

Moreover, the figure might, under present conditions, be misleading, for it might be mistaken for quite a different figure—namely, the total increase in expenditure which the war has imposed on the Hospitals and which they have to meet by securing an equivalent increase in their sources of income. This latter figure might well be of real value when it is possible to calculate it for a complete year. But it is quite distinct from the figure of the total value of the changes in cost per bed which has hitherto been given in these Reports.

Modification of the Report.

It has therefore been decided to omit altogether in this Prefatory Note the comparisons between 1914 and the previous year, and in the tables the figures of relative cost based on comparisons between each Hospital in a group and the average of the group.

At the same time, it has not been thought desirable to suspend the preparation of the Report altogether. The cost per bed at each Hospital is therefore given, and the average for each group. The governing body of each Hospital can thus see by comparison with previous reports what the increase of cost has been, and can obtain by comparison with other Hospitals material for estimating whether the increase is such as was to be expected from the changed circumstances, or whether these changes have been accompanied by any increase or decrease in the control exercised over expenditure with a view to securing economy.

For the assistance of those who wish to use the Report for this purpose the following statement of the principles on which the figures of cost are calculated and set out, mainly repeated from last year's report, may be found useful.

Objects and Methods of the Reports.

The object of the Report is to assist Hospitals in controlling their expenditure, and thus in ensuring that as large a proportion as possible of their available funds is devoted to the purpose of maintaining and improving the efficiency of their work. The method adopted in the Reports is to compare the expenditure at each Hospital with the expenditure at other Hospitals, and with the average of those Hospitals with which it is most comparable.

It is not suggested, however, that the lowest expenditure is intended to be taken as a model. All the comparisons are with the average, and even so the Report must not be assumed necessarily to imply any criticism of

the excesses above the average. It only gives the figures as matters for investigation on the part of those concerned.

For the purpose of making the comparisons as fair as possible to the various Hospitals and as useful as possible as an aid to the control of expenditure, the following special principles are observed in the preparation of the Reports:—

(a) The comparisons are limited to the items of expenditure which are the more capable of control. Certain items are thus excluded, sometimes because they are liable to wide and unavoidable variations as between one year and another or between one Hospital and another, sometimes because they cannot readily be modified by the Hospital Committees. These include the following, viz.: Repairs and other Establishment Charges, Official Salaries and Pensions, Finance, and Rent, Rates and Taxes.* It will therefore be borne in mind that wherever in this Report a total or an average cost per bed or per out-patient attendance is stated,† the figure is exclusive of the above mentioned charges, and that variations in the figures cannot be explained by reference to variations in these items.

(b) The Hospitals are, as far as practicable, arranged in groups, so that the comparisons may be between Hospitals whose work is more or less closely comparable, and the group system is followed in all calculations of averages. This is not intended to prevent comparisons between Hospitals in different groups, a process for which, in fact, special facilities are provided in the preliminary alphabetical tables on pages 26 to 31. In the case of Hospitals which cannot be arranged in groups, the comparisons are confined to the preliminary tables and no group averages are calculated.

(c) The comparisons are made not only for the total expenditure on the various controllable items put together (Table VII. of each group), but also for each of the main sub-heads of expenditure separately, viz.: Provisions, Surgery and Dispensary, Domestic, Salaries and Wages (maintenance), and Management other than Official Salaries and Pensions (Tables II. to VI.). This sub-division is intended to facilitate the discovery of the source of any excess which seems to require justification. It must be borne in mind, however, that Hospitals where direct labour is employed to carry out work (such as, for example, the manufacture of drugs), which at other Hospitals is paid for in the purchase price, will show a proportionately larger expenditure on Salaries and Wages and a correspondingly smaller expenditure on [say] Surgery and Dispensary or whatever the special heading may be.‡ Differences due to this cause cancel out in the comparisons of total expenditure.§

* Tables containing all the expenditure except Rent, Rates and Taxes can be found in the published Annual Reports of the individual Hospitals.

† Except to some extent in the comparisons of laundry cost. See the note at the head of Section III. on page 72.

‡ Only in the case of laundry staff and staff employed on annual cleaning or establishment renewals and repairs is this source of difference removed by transfers made in the course of preparing the Report (see note 15 on page 80).

§ Except that in the case of articles purchased the cost includes an allowance for various expenses incurred by the seller (e.g. Rent, Rates, Establishment, Depreciation, etc.) which are not included in this Report in the case of work done on the premises.

Such statistical particulars as are available of the work done at the different Hospitals are set out in the first table relating to each group. This table shows the average length of stay of in-patients, and the average number of attendances per out-patient. In the present issue of the Report columns are added giving the statistics relating to naval and military patients included in the figures of in-patients.

The group tables are preceded by general alphabetical tables giving particulars of work done, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year) for all the institutions. This introductory section now forms in itself a very nearly complete statistical record of these figures for all the Hospitals of London which observe the Revised Uniform System of Accounts.*

The group tables are followed by a special section dealing with the cost of hospital laundries as compared with the cost of washing not done on hospital premises. This is followed by a short section on Prices, and the Report concludes with notes, partly added by the Fund itself and partly supplied by the Hospitals.

In drawing conclusions from any of the tables it must be understood that they profess to give only the material for a comparison of outlay, and the question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. For this purpose many considerations must be taken into account which will readily occur to those concerned in hospital management. Quite apart from special conditions arising out of the war there may be differences in efficiency or in unavoidable circumstances, as well as in economy of management. Most of these considerations cannot be expressed in statistics at all; others could not be included in a manageable form in a report dealing with 108 Hospitals. This Report will have served its purpose if it stimulates inquiry into the causes of high cost and assists Hospital Managers to see in what departments the source of the excess is to be found, and to reduce it wherever it cannot be justified.

A New Series.

Since no comparisons with past years are made in this year's Report, the present issue may be taken as the first of a new series, or rather of a special transitional series covering the period during which no such comparisons can usefully be made. This transitional series affords a convenient opportunity for introducing into the Report any changes which experience may have shown to be desirable, and which would, if introduced in the middle of a series, cause a break in the comparisons.

* See note 20 on page 81.

One such change is made in the present issue—namely, the subdivision of the larger General Hospitals into two groups, those with Medical Schools and those without. Any further suggestions of alterations in the methods of presenting the statistics will receive the most careful consideration of the Fund, so that, when the time comes for beginning a new continuous series, the Report may be in a form which will render it as useful as possible for the purpose for which it is prepared.

H. R. MAYNARD,

Secretary.

August 30, 1915.

The small figures refer to the notes on pages 79 to 84.

* These figures relate to Naval or Military patients admitted by understanding with the Authorities. (See note 6 on page 79.)

(a) For the totals and general averages corresponding to these columns for the various groups of Hospitals see note 18 on page 81.

† In the case of King's College Hospital the figures on page 16 (and the figures in the first three columns of the above Table) relate to civil cases only, and do not include the military patients who (on April 30th, 1915) occupied 565 beds out of a total of 787 beds. (See note 6 on page 79.) The total number of beds available for civil patients at the end of July was 248 and at the end of December 138.

GROUP VIII. TABLE VII.**HOSPITALS FOR EPILEPSY AND PARALYSIS—(continued).**

GENERAL TABLE.—Analysis of total Expenditure upon Provisions, Surgery and Dispensary, Domestic, Salaries and Wages (Maintenance) and Management (other than Official Salaries and Pensions), taken together, in each of three Hospitals for Epilepsy and Paralysis for the year 1914.

HOSPITAL	IN-PATIENTS			OUT-PATIENTS		
	Beds occupied	Expenditure on In-Patients	Cost per Bed occupied	Out-Patient Attendances	Expenditure on Out-Patients	Cost per Attendance
		£ s. d.	£ s. d.		£ s. d.	Pence
Hospital for Epilepsy and Paralysis	70	3,653 4 10	52 3 9	18,890	516 0 0	6 56
National Hospital for the Paralyzed and Epileptic	143	11,636 14 9	81 7 7	44,303	1,814 12 5	9 82
West End Hospital for Diseases of the Nervous System	48	3,555 17 2	74 1 8	31,016	1,121 2 7	8 68
Totals	261	18,845 16 9	Average: 72 4 1	94,209	3,451 15 0	Average: 8 80

* The figures in these columns are arrived at by adding together the amounts in the corresponding columns of Tables II. to VI. The small figures refer to the notes on pages 79 to 84, and before drawing conclusions from any of these Tables general reference should be made to these notes and also to the note to Table II.

GROUP IX. TABLE I.

COTTAGE HOSPITALS.

GENERAL PARTICULARS relating to the work and accommodation of thirteen Cottage Hospitals for the year 1914.

HOSPITAL	IN-PATIENTS			OUT-PATIENTS			Naval or Military Patients* (Included in In-patients)		
	Beds		Average number of days each Patient was resident	Total new Out-patients	Total Attendances	Average number of Attendances per Out-patient	Number treated in 1914	Total Patient days represented by these Patients	Number of Average Occupied Beds for the year represented by these Patients
	Total (a)	Average number in daily occupation (a)		(a)	(a)	(a)	(a)	(a)	(a)

* The figures in these columns are arrived at by adding together the amounts in the corresponding columns of Tables II. to VI. The small figures refer to the notes on pages 79 to 84, and before drawing conclusions from any of these Tables general reference should be made to these notes and also to the notes to Tables II. and IV.

SECTION III. LAUNDRY EXPENSES.

ANALYSIS OF COST OF WASHING AT 107 HOSPITALS FOR THE YEAR 1914.

NOTE.—In order to enable the cost of washing at Hospitals with laundries to be compared with the cost at Hospitals which send their washing out, the whole cost of the laundry is taken into account. The figures given below for cost per bed at Hospitals with laundries include, therefore, various items (such as repairs, insurance, depreciation, interest on capital, and rent, rates and taxes) which for the reasons stated in the prefatory note are omitted from the tables of cost per bed &c. in the earlier sections of the Report.

PRICES—continued

The circumstances under which goods were purchased, the quantities and qualities, the date and length of contract, and the conditions of delivery would have to be taken into consideration before assuming that any particular price was obtainable by every institution. The figures are only printed for the purpose of indicating to Hospitals whose cost is such as to suggest the desirability of investigation, a possible line of enquiry. To facilitate such enquiries, a list of Hospitals contributing to the list, a good deal of information as to quantities, quantities, contracts, is available for inspection, by the authorised representatives of those Hospitals, at the offices of the Fund.

a In comparing the columns headed "whole period" with those headed "January, 1915," it should be borne in mind that in the tables the figures for January, 1915, are included in the whole period. It is not possible to give figures for 1914 separately from January, 1915, because Hospitals whose latest purchase was in January, 1915, were not asked to quote in addition the latest price paid in 1914.

^a In comparing the columns headed "whole period" with those headed "January, 1915," it should be borne in mind that in the tables the figures for January, 1915, are included in the whole period. c "—12 inch.

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

Where no entry appears the Hospitals are unable to divide their beds under these headings.

The Royal London Ophthalmic returns the number of beds as 188, 20 being empty in 1914.

(2) In the case of *St. Thomas's Hospital* the 40 paying beds, although included in the total number of beds in the Hospital, namely 682, are not included in the average number of beds in daily occupation, namely 581. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them.

(3) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and others is based on figures supplied by the Hospitals; but the varying proportions of casualties to others suggest that the definition of a casualty differs in different Hospitals.

(4) The *Eltham and Mottingham Cottage Hospital*, the *Finchley Cottage Hospital*, the *Hornsey Cottage Hospital*, the *Passmore Edwards Cottage Hospital*, *Willesden*, the *Passmore Edwards Cottage Hospital*, *Wood Green*, the *Wimbledon Hospital*, and the *Woolwich and Plumstead Cottage Hospital*, although having no general Out-Patients' Department, treat a small number of casualties, the cost of which is included in that of the In-Patients.

(5) The *Clapham Maternity Hospital* treats a small number of Out-patients at the In-patient Department at Clapham, and the cost of these Out-patients is included in the cost per bed.

(6) *Naval and Military Patients.*—The figures on pages 15, 17 and 19 are taken from a special return supplied by the Hospitals. They show the total amount of work done under this heading during 1914, and also the proportion which this work bears to the total work done during the whole of that year. As this work began at different Hospitals on different dates, and as the number of beds reserved for or occupied by military patients often varied from time to time, the figure given in the tables is the average daily number of occupied beds for the whole year represented by the beds occupied by these patients during the period subsequent to the outbreak of war. A comparison between this figure and the total average occupied beds for the year shows what proportion of the work of the year is attributable to these patients. For obvious reasons both the total amount and the proportion will be much greater in 1915 than in 1914. Military Out-Patients and In-Patients not treated "by understanding with the authorities" are not included.

In all cases, except that of *King's College Hospital*, the expenditure on naval and military patients is included in the figures of expenditure and consequently in the cost per bed. In the case of *King's College Hospital* the military patients are treated in the 4th London General Hospital, for which purpose a considerable portion of the new Hospital was placed at the disposal of the War Office on the outbreak of war. As the expenditure on military cases in 1914 cannot be separated from the expenditure on civil cases, the figures for this hospital have been excluded from the various Tables of Group I. as not being comparable with those of other Hospitals.

(7) *St. John's Hospital, Lewisham*.—The cost of the Bacteriological and X-Ray work done for the Lewisham Borough Council, the Lewisham Board of Guardians, and the Chatteris Urban District Council, is not included in the figures in this Report.

(8) *Consumption Hospitals*.—The figures relating to the Country Branch of the Hospital for Consumption are not included in this Report.

(9) *Lying-in Hospitals*.—The figures relating to the Training Schools of the various hospitals in this group are not included in this Report.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of St. Vincent de Paul. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages in Group II., Table V.

(11) The *Passmore Edwards Cottage Hospital*, Acton. The cost of the District Nursing Institution, Invalid Kitchen, and Dispensary, is not included in the figures in this Report.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 15 and 20 below).

(13) *Provisions*.—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. At some Hospitals however, the nurses return to the wards after taking private cases, and during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic*.—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," "Establishment Charges," and "Rent, Rates and Taxes," as shown in the washing returns published by these hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. (See Section III. for comparison of cost of washing taken by itself, including the charges for depreciation and interest.)

(15) *Establishment and Salaries and Wages*.—Comparisons of cost in the separate Tables II. to VI., and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences in the separate tables cancel one another in the general Table VII.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses*.—Tables VI. of each Group show the Total Management Expenses divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain hospitals the patients are required, unless too poor, to provide certain articles of food. These are as follows: *London Homoeopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *Middlesex*, tea and sugar; *University College*, tea and sugar.

(18) The totals and general averages corresponding to the columns marked (4) in Section I., Table I., and Table I. in each Group, for the different groups of Hospitals, excluding those Hospitals that have been omitted for various reasons, are as follows:—

Group	IN-PATIENTS				OUT-PATIENTS			Naval or Military Patients* (Included in In-Patients)		
	Beds		Total number of New In-patients	Average number of days each Patient was resident	Total new Out-Patients	Total Attendances	Average number of Attendances per Out-Patient	Number treated in 1914	Total Patient days represented by these Patients	Number of Average Occupied Beds for the year represented by these Patients
	Total	Average number in daily occupation

* These figures relate to Naval or Military Patients admitted by understanding with the Authorities. (See note 6 on page 79.)

(19) The issue of these Reports was begun by Mr. J. Danvers Power with the figures of 16 Hospitals for 1908. But the earlier ones contained confidential matter, and the first Report published was that for 1908.

(20) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a book issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 29 Farnival Street, Holborn, E.C. (3rd edition, August 1914, price 1s. 9d. post free). The System was drawn up by the three Funds after reports on the subject by Mr. John G. Griffiths, F.C.A., and a Committee of Hospital Secretaries.

NOTES RELATING TO THE ITEMS DEALT WITH IN THIS REPORT PRINTED IN COURTESY
TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE KINDLY SUPPLIED.

(21) *Bolingbroke Hospital*.—"The War has increased the price of nearly all articles used, and this is one of the main causes of the extra weekly cost of the In-patients."

(22) *Finchley Cottage Hospital*.—"The expenditure on the Hospital this year is £66 more than that last year. The items mainly responsible for this increase are set forth below:—

Items	Increase	Remarks
Provisions	£34 ...	£26 of this occurs under 'Meat,' and is due to slightly higher prices and also to increased consumption.
Surgery and Dispensary	£25 ...	£20 of this is due to the purchase of new instruments.
Domestic	£12 ...	Due to washing—increased quantity. Fuel—increased cost.
Salaries and Wages ...	£29 ...	The Probationers are now paid instead of giving their services for the first six months. Salaries of Staff Nurses also increased."

(23) *Hospital and Home for Incurable Children*.—"Washing return, £188. 2s. 8d.; average weekly cost, £2. 11s. 2d., made up as follows:—

15 Staff at 1s. 4d. or 1s. 6d. per head	£1 0 0
General, 468 articles	1 4 6
Blankets, counterpanes, and sundries	0 6 8
	£2 11 2

The washing of the Staff is paid for at 1s. 4d. or 1s. 6d. per head; the number of articles sent is not known."

(24) *Hospital of St. John and St. Elizabeth*.—"Number of Beds.—When War broke out the Hospital made an offer to the Government of 40 beds, and for the months of August, September, and October these beds were kept empty. We daily expected the wounded soldiers, but none arrived, the 40 empty beds thus greatly reducing our average in the 'daily enumeration of Patients.'

"Towards the end of October, many wounded coming over, the Hospital made an offer of 100 beds for the men (which was accepted by the Government), and on the 1st of November, 1914, 65 wounded soldiers arrived; and from that day to this the beds have been kept well occupied, the numbers ranging from 75 to nearly 100 men.

"From November 1, 1914, to the present time we have had:—

- 100 beds set aside for the fighting men (and should beds be empty urgent civilian cases are received).
- 17 beds for surgical cases, women.
- 17 beds for medical cases, women.
- 17 beds for children.

Total 151 beds"

(25) *London Homœopathic Hospital—Salaries and Wages—Nursing*.—"There has to be a larger number of Nurses on the Staff than in Hospitals with Medical Schools. The Nurses of the Hospital do the work (dressings, etc.) done by the Students in Hospitals with Medical Schools.

"The male servants are not boarded at the Hospital, but are paid extra wages in lieu of food: therefore Domestic Wages are more, Provisions less."

(26) *London Hospital*.—"Attention is called to the fact that while the average number of beds occupied daily during 1914 only increased by 5 on 1913, the number of In-patients treated to a conclusion was increased by 1,152."

(27) *Metropolitan Hospital*.—"Patients are not called upon to provide themselves with anything required for their treatment.

"Special provision is made for Jewish Patients, Jewish Cook, Jewish Kitchen, and Jewish Wards.

"Two top Wards, containing 86 beds, are still used for the housing of the Nurses.

"The Resident Medical Officers give all anaesthetics.

"Special attention is given to the training of Nurses."

(28) *Middlesex Hospital*.—"Apart from the War the expenditure account would have shown heavier maintenance charges. The triennial cleanings and repair of the buildings, and the renewal and repair of furniture and equipment, which are undertaken at the same time, add considerably to the normal expenditure, and render any comparison with the previous year's account imperfect.

"The decrease in the number of patients treated brought about by the closure of each ward in turn vitiates any comparison based upon the average cost of each patient per week.

"In 1914, however, a factor far more important in its influence has to be reckoned with, namely, the excessive rise in prices paid for practically every commodity used, and every form of labour employed. There is hardly a single item of the account which has remained unaffected by this cause. Contracts expiring after the declaration of War could not be renewed except at ruling market prices, and, in some instances, not even then, having regard to the likelihood of a further rise in prices occurring. In the case of unexpired contracts, refusal to deliver, or applications for concessions had to be carefully considered, and, even when the maximum, assessed in a spirit of fairness and moderation induced by a just appreciation of the exceptional circumstances, had been exacted, increased expenditure on all sides was inevitable."

(29) *Middlesex Hospital Cancer Charity*.—"Comparing the charges with those for the previous year, we find that the total average cost of each patient per week rose from £1 19s. 9½d. to £2 3s. 5½d., and that the average total cost of the complete treatment of each patient shows an increase of £4 0s. 0½d. The causes for this are not far to seek. The triennial cleaning and repair of the whole of the building, with the renewal and repair of equipment and furniture, which is undertaken at the same time, affected the majority of the items of the account, but 'Domestic' [and 'Establishment'] charges most of all. This factor in itself would have produced a considerable increase of expenditure, but another, the abnormally high prices resulting from the War, exerted even a greater influence on the account."

(30) *National Hospital for Diseases of the Heart*.—"It will be noticed that the average number of Beds occupied daily is given as 20. This low figure is due to the fact that the In-patient Department was only partially opened on the 19th of January, 1914, on which date one patient was admitted. The reason for this was, of course, the removal of the Hospital from its old premises in Soho Square to the new building in Westmoreland Street.

"In order to illustrate the difference which this temporary closing has effected on our Statistics, it may be mentioned that had we been open from January 1st our Average number of Beds occupied daily would have been 23 (instead of 20) and our Average Total Cost of each In-patient per week £1. 12s. 6d. instead of £1. 17s. 8d."

(31) *Paddington Green Children's Hospital—In-patient Department. Re Milk*.—"The Medical Committee of this Hospital being of opinion that the supply of Milk for the Patients in the Wards should continue to be obtained from special Laboratories, the extra cost of milk, due to this fact, in 1914 was £88. 2s. 7d.

"Out-Patient Department. Cost of each Out-patient Attendance.—The supplies of medicines, surgical dressings, &c., given to Out-patients were as follows:

Supply for 7 days	16,564=16,564
" 14 "	24,850=48,700
" 21 "	3,326= 9,978
" 28 "	3,542=14,168
	47,782 89,410=weekly supplies.

Advice and treatment 4,409

Total attendances as registered 52,191"

(92) *Poplar Hospital*.—"Please note in regard to the cost of Out-patients that we do not make any Patients coming to the Casualty Department 'Medical Out-patients.' Our Out-patient Department, as distinguished from the Casualty Department, treats 'Surgical Out-patients only.'"

(93) *Queen Charlotte's Lying-in Hospital*.—"The increase in the cost per In-patient in 1914 is chiefly accounted for under the head of 'Domestic.' The Gifts of the Ladies' Association are now required to be included in the General Account. These amounted last year to £392—equivalent to 2s. 6d. per patient per week.

"Since the outbreak of War the prices of provisions, drugs, and many other Hospital requirements have increased considerably, and the cost per patient would have been materially less but for these unavoidable increases.

"The Committee further desire to draw attention to the continuous increase in the number of operative cases treated at the Hospital, which is far in excess of the numbers at any other Lying-in Hospital. As an instance it may be mentioned that the operation of caesarean section was performed on 42 occasions in 1914. Also the number of serious cases admitted as emergencies has greatly increased of recent years. Last year 136 such cases were admitted. They are invariably cases sent by medical men because of their serious nature and they involve expenditure on a much higher scale than in the case of normal labours."

(94) *The Royal Hospital for Diseases of the Chest*.—"Surgery and Dispensary.—Under the sub-heading of 'Instruments and Appliances' is included the cost of renewals and repairs to instruments, apparatus, &c., used in the following Special Departments:—Pathological, Cardiological, Laryngological, X-Ray, Dental.

"Salaries, Wages, &c.—The Expenditure under the sub-heading 'Medical' includes a sum of £260, being honoraria paid to the Physicians; also the salaries of a whole-time Pathologist and a Medical Registrar (appointed in October) at £120 and £105 per annum respectively.

"Beds (80) Daily average, 66. During 1914 each of the three Wards was closed for a fortnight for cleaning purposes, which reduced the daily number of available beds from 80 to 76."

(95) *Royal National Orthopaedic Hospital*.—"The average weekly cost of each In-patient is increased for two reasons, among others:—

- (i) "130 beds were accepted by War Office in August and remained empty till October 13.
- (ii) "The proportion of adult Patients and the number of operations have largely increased as a result of the military work."

(96) *St. George's Hospital*.—"Laundry Expenses.—In a very few cases the Patients get their personal washing done themselves; in the large majority of cases Hospital garments are used and are washed at the Hospital's expense."

(97) *St. Monica's Home Hospital*.—"For some weeks it was necessary to keep many beds empty owing to an outbreak of chicken pox and whooping-cough, and subsequently each ward was closed in turn while the electric light was being installed. The average number of beds occupied was consequently less than in the previous year, and the average cost of each In-patient per week was proportionately higher, being £1. 10s. 2d. as compared with £1. 1s. 4d. in 1913 and £1. 6s. in 1912."

(98) *St. Thomas's Hospital*.—"Surgery and Dispensary.—A new Gynaecological Theatre has been equipped and the stock of surgical instruments enlarged. On the outbreak of War, drugs likely to rise in price were purchased and a much heavier stock than usual was held at the end of the year.

"Domestic.—The stock of linen was considerably enlarged at an extra cost of £2,200 beyond the Ordinary Expenditure for renewals. Renewal of Furniture.—A new supply of bedsteads was purchased at an outlay of £399 and included in Ordinary Expenditure."

(99) *Woolwich and Plumstead Cottage Hospital*.—"The Governors of this Hospital point out that during 1914 there had been a saving in total expenditure of about £100, notwithstanding special work had been carried out to improve the efficiency of the Hospital during that year. They also point out that the accommodation for patients and staff is now infinitely better than some four years ago. The new items include new bedsteads, full stock of linen and dressings, electric installation and special lamps in theatre, new floor covering for wards, newly built outbuildings for storage purposes and new bathroom for nurses. These improvements, other than the last, were paid for out of income. The entire cost of the out-patients is included with the cost per bed. These items naturally cause a relatively high cost per bed. The Governors are satisfied that the work of the Hospital is carried out as economically as is consistent with efficiency."

STATISTICAL REPORT

ON THE

ORDINARY EXPENDITURE

OF

ONE HUNDRED AND NINE LONDON HOSPITALS

FOR THE YEAR

1915

AUGUST, 1916.

LONDON

PRINTED AND PUBLISHED FOR KING EDWARD'S HOSPITAL FUND FOR LONDON

BY SPOTTISWOODE, BALLANTYNE & CO. LTD., 1 NEW-STREET SQUARE, E.C.

COPYRIGHT

To HIS HIGHNESS THE DUKE OF TECK, G.C.B., G.C.V.O., THE
 VISCOUNT IVEAGH, K.P., AND THE SPEAKER OF THE
 HOUSE OF COMMONS, *Governors of King Edward's
 Hospital Fund for London.*

SIRS,

We have the honour to submit the Thirteenth Annual Statistical Report, prepared by Mr. Maynard from the published accounts of one hundred and nine London Hospitals and from returns made to the Fund.

These Hospitals are :—

- 11 General with Medical Schools and with an average of over 100 beds in daily occupation.
- 8 General Hospitals without Medical Schools and with an average of over 100 beds in daily occupation.
- 14 Smaller General Hospitals.
- 2 Consumption Hospitals.
- 6 Hospitals for Women.
- 6 Hospitals for Children.
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 13 Cottage Hospitals.
- 8 Lying-in Hospitals.
- 33 Unclassified Hospitals.

109

These Hospitals, taken together with St. Bartholomew's Hospital, provided a total of 10,942 beds in average daily occupation in 1915. The total number of In-patients admitted during that year was 157,510, while 1,333,706 patients attended at the Out-patient Departments.

Out of the total of 157,510 In-patients, 28,645 were naval or military patients treated by understanding with the authorities; these patients representing an average for the whole year of 2,378 occupied beds, or nearly 22 per cent. of the total average occupied beds.

It will be noticed that the total average occupied beds was raised from 9,766 in 1913 to 10,942 in 1915, an increase of 1,176 beds; it follows, therefore, that 1,202 of the number of beds occupied by the naval and military patients were taken from those previously used by civilians, the remaining 1,176 beds for war patients being provided for by an increase in the total accommodation at the Hospitals.

The total ordinary expenditure during the year at these Hospitals (with St. Bartholomew's), including Maintenance, Administration, Rent, Rates, and Taxes, but excluding capital expenditure, interest on borrowed money, and contributions to the maintenance of Convalescent Homes and Country

branches, amounted to £1,342,127. Towards this outlay, the receipts from the authorities in aid of the expenditure on naval and military patients amounted to £150,920, or just over 11 per cent. of the total ordinary expenditure; leaving £1,191,207 to be met out of the normal sources of Hospital revenue.

As the total ordinary expenditure in 1913 was £1,142,938, the London Voluntary Hospitals had to meet, as compared with the year before the war, an additional working expenditure of £48,269.

As is well known, the cost of drugs and provisions has continually risen during the year under review; while the difficulties of staffing Hospitals have been very largely increased by the urgent demands for Physicians, Surgeons and Nurses for the Naval and Military forces.

In view of this increase in total work and total expenditure, the importance of the grants made by this Fund and by the Hospital Sunday and Hospital Saturday Funds needs no emphasis; while the necessity for the maintenance of voluntary subscriptions from the charitable public is obvious.

For reasons explained in the Prefatory Note, comparisons of cost per bed between the current year and the previous year have again been omitted. The average cost at each Hospital, and the average cost of each group of Hospitals, continue, however, to be prepared for the assistance of Hospital Managers in controlling expenditure—the importance of which branch of administration is increased rather than diminished by the unavoidable increase in the total outlay.

We have the honour to be, Sirs,

Your obedient servants,

SOMERLEYTON,

FREDERICK M. FRY,

JOHN G. GRIFFITHS,

Honorary Secretaries.

August 31, 1916.

NOTES.

NOTES ADDED BY THE FUND	50
NOTES SUPPLIED BY THE HOSPITALS	53

PREFATORY NOTE.

The Statistical Report deals this year with the expenditure in 1915 of 109 Hospitals. These include nearly all the Hospitals which apply for grants from the Fund, as well as some others which very kindly supply the necessary information, and thus enable the Report to be more complete than it would otherwise be.*

Further Modification of the Report.

The Report this year has been still further reduced in size. This is partly due to motives of economy in cost, in postage, and in paper, and partly to the fact that much of the material which is useful in ordinary times is useless under war conditions. As was pointed out in the last Report, the cost of working at Hospitals has been affected by the rise of prices, by the shortage of workers both skilled and unskilled, and by changes in the number of occupied beds due to the provision of beds for wounded soldiers.

The last named cause, in particular, affects Hospitals very unequally. Sometimes it operates so as to decrease the number of beds occupied, and thus increase the cost per bed; sometimes so as to increase the number and decrease the cost. In either case it often acts in a manner quite outside the control of the Hospital management.

For these reasons the calculations based on comparisons with average cost have again been omitted; while this year the tables are printed in a condensed form, and the comparisons of laundry expenditure have been suspended.

Total Work and Expenditure in 1915; with Statistics of Naval and Military Patients.

Comparisons of cost per bed between 1915 and previous years have also been omitted, but the following comparisons of total work and total expenditure for 1913, 1914, and 1915 may be interesting.†

	1913	1914	1915
1. Total beds available	11,472	12,463	13,633
2. Average beds occupied	9,766	9,867	10,942
3. Total new in-patients	143,942	149,104	157,510
4. Total new out-patients	1,409,454	1,429,611	1,333,706
5. Total out-patient attendances	4,978,200	5,119,195	4,912,058
6. Naval or Military in-patients included above:—			
(a) Number treated	—	6,163	28,645
(b) Total patient-days	—	125,802	867,203
(c) Equivalent average occupied beds for the whole year	—	344	2,378
7. Civilian in-patients included above:—			
(a) Number treated	143,942	142,941	128,865
(b) Average occupied beds	9,766	9,523	8,564
8. Total ordinary expenditure:‡£	1,142,938	1,211,448	1,342,127
9. Payments by authorities in aid of expenditure on naval or military patients£	—	19,500	150,920
10. Ordinary expenditure falling upon the normal sources of hospital income:‡£	1,142,938	1,191,948	1,191,207

* See note 19 on page 52.

† In this table the figures of St. Bartholomew's Hospital are included. Country branches and Convalescent Homes are not included. In some cases, naval and military patients are treated in these branches as well as at the parent Hospital. The figures of naval and military patients refer to patients treated "by understanding with the authorities."

‡ Ordinary expenditure includes Maintenance, Administration, and Rent, Rates and Taxes, but not interest on loans, contributions in aid of Convalescent Homes or Country branches, or capital expenditure.

Although these changes are the combined result of a number of causes operating at more than one hundred different institutions, the general comparison will give some idea of the way in which the war has affected the work and expenditure of the London voluntary Hospitals taken as a whole.

The average number of occupied beds increased between 1913 and 1915 from 9,766 to 10,942. As 2,378 of these beds were accounted for in 1915 by the admission of naval or military patients, the average number of beds occupied by civilian patients fell from 9,766 to 8,564. To put the same change in another way, the treatment of 28,645 naval or military patients in 1915 was accompanied by a decrease of 15,077 in the number of civilian in-patients, leaving a net increase of 13,568 in the total number of persons admitted to the wards.

The total ordinary expenditure, which in 1913 was £1,142,938, had risen in 1915 to £1,342,127, an increase of £199,189. In so far as this increase was due to the treatment of naval or military patients, it was partially covered by contributions from the authorities amounting to £150,920. The balance, amounting to £48,269, represents the additional ordinary expenditure* which fell on the funds of the voluntary Hospitals of London during 1915.

Objects and Methods of the Reports.

The object of the detailed tables in the body of the Report is to assist hospital managers, and others interested, in controlling expenditure, and thus reducing as far as possible that part of the increase in cost which is not represented by an increase in the quantity or quality of the work done. The method adopted is to compare the expenditure at each Hospital with the expenditure at other Hospitals, and with the average of those Hospitals with which it is most comparable. Increases which are common to all Hospitals can thus be distinguished from those which are peculiar to any particular institution.

It is not suggested, however, that the lowest expenditure is intended to be taken as a model. All the comparisons are with the average; and even so the Report must not be assumed necessarily to imply any criticism of the excesses above the average. It only gives the figures as matters for investigation on the part of those concerned.

For the purpose of making the comparisons as fair as possible to the various Hospitals and as useful as possible as an aid to the control of expenditure, the following special principles are observed in the preparation of the Reports:—

(a) The comparisons are limited to the items of expenditure which are the more capable of control. Certain items are thus excluded, sometimes because they are liable to wide and unavoidable variations as between one year and another or between one Hospital and another, sometimes because they cannot readily be modified by the Hospital Committees. These include the following, viz.: Repairs and other Establishment Charges, Official Salaries and Pensions, Finance, and Rent, Rates and Taxes.† It will therefore be borne in mind that

* See note † on page 7.

† Tables containing all the expenditure except Rent, Rates and Taxes can be found in the published Annual Reports of the individual Hospitals.

wherever in this Report a total or an average cost per bed or per out-patient attendance is stated, the figure is exclusive of the above mentioned charges, and that variations in the figures cannot be explained by reference to variations in these items.

(b) The Hospitals are, as far as practicable, arranged in groups, so that the comparisons may be between Hospitals whose work is more or less closely comparable, and the group system is followed in all calculations of averages. This is not intended to prevent comparisons between Hospitals in different groups, a process for which, in fact, special facilities are provided in the preliminary alphabetical tables on pages 24 to 29. In the case of Hospitals which cannot be arranged in groups, the comparisons are confined to the preliminary tables and no group averages are calculated.

(c) The comparisons are made not only for the total expenditure on the various controllable items put together, but also for each of the main sub-heads of expenditure separately, viz.: Provisions, Surgery and Dispensary, Domestic, Salaries and Wages (maintenance), and Management other than Official Salaries and Pensions. This sub-division is intended to facilitate the discovery of the source of any excess which seems to require justification. It must be borne in mind, however, that Hospitals where direct labour is employed to carry out work (such as, for example, the manufacture of drugs), which at other Hospitals is paid for in the purchase price, will show a proportionately larger expenditure on Salaries and Wages and a correspondingly smaller expenditure on [say] Surgery and Dispensary or whatever the special heading may be.* Differences due to this cause cancel out in the comparisons of total expenditure.†

Such statistical particulars as are available of the work done at the different Hospitals are set out in the first table relating to each group. This table shows the average length of stay of in-patients, and the average number of attendances per out-patient. In the present issue of the Report, as in the last, columns are added giving the statistics relating to naval and military patients included in the figures of in-patients.

The group tables are preceded by general alphabetical tables giving particulars of work done, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year) for all the institutions. This introductory section now forms in itself a very nearly complete statistical record of these figures for all the Hospitals of London which observe the Revised Uniform System of Accounts.‡

In drawing conclusions from any of the tables it must be understood that they profess to give only the material for a comparison of outlay, and the question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. For this purpose many considerations must

* Only in the cases of laundry staff and staff employed on annual cleaning or establishment renewals and repairs is this source of difference removed by transfers made in the course of preparing the Report (see notes 14 and 15 on page 51).

† Except that in the case of articles purchased the cost includes an allowance for various expenses incurred by the seller (e.g. Rent, Rates, Establishment, Depreciation, etc.) which are not included in this Report in the case of work done on the premises.

‡ See note 20 on page 52.

SECTION III.—LAUNDRY EXPENSES.

(Omitted this year.)

SECTION IV.—PRICES.

(Omitted this year.)

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

Where no entry appears the Hospitals are unable to divide their beds under these headings.

The *Royal London Ophthalmic* returns the number of beds as 188, 20 being empty in 1915.

(2) In the case of *St. Thomas's Hospital* the 44 paying beds are not included in the average number of beds in daily occupation, namely 880, and have this year been deducted in giving the total number of beds in the Hospital, namely 988. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them.

(8) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and Others is based on figures supplied by the Hospitals; but the varying proportions of casualties to others suggest that the definition of a casualty differs in different Hospitals.

(4) The *Eltham and Mottingham Cottage Hospital*, the *Finchley Cottage Hospital*, the *Hornsey Cottage Hospital*, the *Passmore Edwards Cottage Hospital*, *Willesden*, the *Passmore Edwards Cottage Hospital*, *Wood Green*, the *Wimbledon Hospital*, and the *Woolwich and Plumstead Cottage Hospital*, although having no general Out-Patients' Department, treat a small number of casualties, the cost of which is included in that of the In-Patients.

(5) The *Clapham Maternity Hospital* treats a small number of Out-patients at the In-patient Department at Clapham, and the cost of these Out-patients is included in the cost per bed.

(6) *Naval and Military Patients*.—The figures in the three columns at the end of the table on pages 18, 15 and 17 and in Table I. of Groups I. to IX. are taken from special returns supplied by the Hospitals. They show the total amount of work done in 1915, "by understanding with the authorities" for Naval and Military In-Patients, and, by comparison with the figures given in the earlier columns of these tables, the proportion which this work bears to the total work done during that year. Naval and Military Patients treated otherwise than "by understanding with the authorities" are not included in these special columns.

As a general rule, the expenditure on naval and military patients is included in the figures of expenditure and consequently in the cost per bed and in the group averages. The exceptions are *King's College Hospital*, the *Metropolitan Hospital* and *St. Thomas's Hospital*, where the number of military beds is such as to amount rather to the addition of a Military Hospital than merely the admission of military patients to the Civil Hospital; and the *Royal Hospital for Diseases of the Chest*, which ceased to take civil patients after July 1, 1915. The figures for these hospitals have been excluded from the Group averages as not being comparable with those of other hospitals.

(7) *St. John's Hospital, Lewisham*.—The cost of the Bacteriological and X-Ray work done for the Lewisham Borough Council, the Lewisham Board of Guardians, and the Chatteris Urban District Council, is not included in the figures in this Report.

(8) *Consumption Hospitals*.—The figures relating to Country Branches are not included in this Report.

(9) *Lying-in Hospitals*.—The figures relating to the Training Schools of the various hospitals in this group are not included in this Report.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of St. Vincent de Paul. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages in Group III., Table II., with the result that the averages for Salaries and Wages and for total cost are not reduced by the low figure for Salaries and Wages at this Hospital.

(11) The *Passmore Edwards Cottage Hospital*, Acton. The cost of the District Nursing Institution, Invalid Kitchen, and Dispensary, is not included in the figures in this Report.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 15 and 20 below).

(13) *Provisions*.—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. At some Hospitals, however, the nurses return to the wards after taking private cases; during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic*.—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," "Establishment Charges," and "Rent, Rates and Taxes," as shown in the washing returns published by these hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. The Tables showing the cost of washing usually appearing as Section III. of this Report are not published this year.

(15) *Establishment and Salaries and Wages*.—Comparisons of cost under the separate heads, and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences under the several heads cancel one another in the final columns giving total cost for all the headings combined.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses*.—For the purposes of this Report the total Management Expenses are divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain hospitals patients are required, unless too poor, to provide certain articles of food. These are as follows: *London Homoeopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *Middlesex*, tea and sugar; *University College*, tea and sugar.

(18) The totals and general averages corresponding to the columns marked (b) in Section I, Table I, for the different groups of hospitals, are as follows:—

Group of Hospitals	IN-PATIENTS				OUT-PATIENTS			Naval or Military Patients* (Included in In-Patients)		
	Beds		Total number of New In-patients	Average number of days each Patient was resident	Total new Out-Patients	Total Attendances	Average number of Attendances per Out-Patient	Number treated in 1915	Total Patient days represented by these Patients	Number of Average Occupied Beds for the year represented by these Patients

* These figures relate to Naval or Military Patients admitted by understanding with the Authorities. (See note 6 on page 50.)

† The Hospitals mentioned in note 6 on page 50 are not included in these averages.

‡ Discharged soldiers through Insurance and Local Authorities.

(19) The issue of these Reports was begun by Mr. J. Danvers Power, M.V.O., with the figures of 16 Hospitals for 1908. But the earlier ones contained confidential matter, and the first Report published was that for 1908.

(20) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a book issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 23 Farnival Street, Holborn, E.C. (3rd edition, August 1914, price 1s. 9d. post free). The System was drawn up by the three Funds after reports on the subject by Mr. John G. Griffiths, M.V.O., F.C.A., and a Committee of Hospital Secretaries.

NOTES RELATING TO THE ITEMS DEALT WITH IN THIS REPORT PRINTED IN COURTESY TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE KINDLY SUPPLIED.

(21) *Bolingbroke Hospital*.—"The continued high and increasing cost of drugs, dressings, food, and other articles used has increased the cost per bed and cost per Out-patient attendance, although every endeavour has been made to economise."

(22) *Canning Town Women's Settlement Hospital*.—"As the accounts and statistical tables show, the expenses of the Hospital have increased very considerably during the past year. This is solely due to the advanced prices of provisions, drugs, and other commodities owing to the war; but every effort has been, and is being, made to carry on the work of the Hospital at the lowest possible cost, without in any way impairing its efficiency and usefulness."

(23) *Charing Cross Hospital*.—"Increase in cost per bed and per Out-patient Attendance—Provisions.—This is entirely due to increased prices owing to the war."

(24) *London Homœopathic Hospital—Salaries and Wages—Nursing*.—"There has to be a larger number of Nurses on the Staff than in Hospitals with Medical Schools. The Nurses of the Hospital do the work (dressings, &c.) done by the Students in Hospitals with Medical Schools."

(25) *Metropolitan Hospital*.—"Patients are not called upon to provide themselves with anything required for their treatment."

"Special provision is made for Jewish Patients, Jewish Cook, Jewish Kitchen, and Jewish Wards."

"The Resident Medical Officers give all anaesthetics."

"Special attention is given to the training of Nurses."

"The accommodation for the Sick and Wounded Soldiers is in addition to the ordinary work of the hospital."

(26) *National Hospital for Diseases of the Heart*.—"The decrease in the number of Out-patients' attendances is more apparent than real, a different method of computation having been adopted. In the past it appears that if medicine was taken for a month it was counted as two attendances; now it is only counted as one. Other reasons, such as the darkened streets, may have caused fewer patients to come, especially on the two evenings when Out-patients are seen."

(27) *Paddington Green Children's Hospital*.—"In-patient Department. *Re Milk*.—The Medical Committee of this Hospital being of opinion that the supply of Milk for the Patients in the Wards should continue to be obtained from special Laboratories, the extra cost of milk, due to this fact, in 1915 was £35. 7s. 4d."

"Out-Patient Department. *Cost of each Out-patient Attendance*.—The supplies of medicines, surgical dressings, &c., given to Out-patients were as follows:

Supply for 7 days 14,162=14,162

" 14 " 28,175=46,350

" 21 " 2,988= 8,964

" 28 " 3,164=12,656

48,489 82,132=weekly supplies.

Advice and treatment 2,142

Total attendances as registered 45,631"

(28) *Poplar Hospital*.—"Please note in regard to the cost of Out-patients that we do not make any patients coming to the Casualty Department 'Medical Out-patients.' Our Out-patient Department, as distinguished from the Casualty Department, treats 'Surgical Out-patients' only."

(29) *Royal Hospital for Diseases of the Chest*.—"Surgery and Dispensary.—Under the sub-heading of 'Instruments and Appliances' is included the cost of renewals and repairs to instruments, apparatus, &c., used in the following Special Departments:—Pathological, Cardiological, Laryngological, X-Ray, Dental."

"Salaries, Wages, &c.—The Expenditure under the sub-heading 'Medical' includes a sum of £260, being honoraria paid to the Physicians; also the salaries of a whole-time Pathologist and a Medical Registrar (appointed in October) at £120 and £105 per annum respectively."

"*Treatment of Sick and Wounded Soldiers.*—The Council also beg to state that in view of the serious financial position of the Hospital, the difficulty anticipated in obtaining the necessary funds to carry on the work of the Charity owing to increased taxation, and the claims made upon the charitable public on behalf of various War funds, they decided, after careful consideration, to offer the whole of the Hospital beds to the Government for Sick and Wounded Soldiers, to prevent the closing of the In-patient Department altogether. This offer was accepted, and an agreement dating from July 1st last was entered into with the War Office Authorities on a payment basis of 4s. per occupied bed per day."

(30) *Royal Waterloo Hospital.*—"It should be remarked that the increase in the average cost of Out-patients is attributed to the reduced number treated. Economies have been effected where possible, but many of the charges against the Out-patient Department remain unchanged irrespective of the numbers treated."

(31) *St. George's Hospital.*—"The higher percentage of beds vacant is partly attributable to so many having to be held in readiness for Sick and Wounded Soldiers and Sailors and not being immediately filled by the Naval and Military Authorities when those patients were discharged. The Committee did all in their power to keep the beds filled with civil patients between while, but this could only be done in practice when a whole ward could be so used temporarily."

"The increase in the cost per patient is, of course, due to the large increase in the cost of provisions and other necessities."

(32) *St. Mary's Hospital, Plaistow.*—"On and after the 1st July, 1915, minor ailments have been separated from the casualties and classified under their proper headings, *Medical and Surgical, Ear, Nose and Throat, Ophthalmic, &c.* For purposes of comparison the figures for the two half-years are given below."

	Jan. 1-June 30.		July 1-Dec. 31.	
	New cases.	Attendances.	New cases.	Attendances.
Gynæcological	61	411	63	460
Ophthalmic	229	630	256	791
Ear, Nose and Throat	102	987	342	748
Medical and Surgical	543	2,639	2,967	10,506
Casualties only	—	—	795	2,925
Casualties and Minor Ailments	4,679	12,915	—	—
	5,614	17,582	4,423	15,425

Totals for 1915 New Cases, 10,087; Attendances, 33,007."

(33) *University College Hospital.*—"The proportion chargeable to Out-patients has been increased since the amalgamation of the National Dental Hospital with University College Hospital."

(34) *Victoria Hospital for Children.*—"The increased cost of maintenance is due to the admission of military patients into two wards formerly occupied by children."

(35) *Woolwich and Plumstead Cottage Hospital.*—"In view of the very considerable rise in the cost of provisions and supplies of all kinds, the increased cost per head is not a matter for surprise. It is a well-known fact, too, that the cost per head is inevitably greater in the case of a small hospital than in the case of a large institution."

"It must be borne in mind, however, that considerable work and expense has been incurred in relation to Out-patients (including workmen on the Government Housing Scheme), although the entire cost, for statistical purposes, has to be brought into the accounts as against the In-patients."

"The Hospital has no separate Out-patients' Department, but it is hoped that adequate accommodation will be provided when the proposed new Hospital is planned."

1917	1916	1915	1914	1913	1912	1911	1910	1909	1908	1907	1906	1905	1904	1903	1902	1901	1900	1899	1898	1897	1896	1895	1894	1893	1892	1891	1890	1889	1888	1887	1886	1885	1884	1883	1882	1881	1880	1879	1878	1877	1876	1875	1874	1873	1872	1871	1870	1869	1868	1867	1866	1865	1864	1863	1862	1861	1860	1859	1858	1857	1856	1855	1854	1853	1852	1851	1850	1849	1848	1847	1846	1845	1844	1843	1842	1841	1840	1839	1838	1837	1836	1835	1834	1833	1832	1831	1830	1829	1828	1827	1826	1825	1824	1823	1822	1821	1820	1819	1818	1817	1816	1815	1814	1813	1812	1811	1810	1809	1808	1807	1806	1805	1804	1803	1802	1801	1800	1799	1798	1797	1796	1795	1794	1793	1792	1791	1790	1789	1788	1787	1786	1785	1784	1783	1782	1781	1780	1779	1778	1777	1776	1775	1774	1773	1772	1771	1770	1769	1768	1767	1766	1765	1764	1763	1762	1761	1760	1759	1758	1757	1756	1755	1754	1753	1752	1751	1750	1749	1748	1747	1746	1745	1744	1743	1742	1741	1740	1739	1738	1737	1736	1735	1734	1733	1732	1731	1730	1729	1728	1727	1726	1725	1724	1723	1722	1721	1720	1719	1718	1717	1716	1715	1714	1713	1712	1711	1710	1709	1708	1707	1706	1705	1704	1703	1702	1701	1700	1699	1698	1697	1696	1695	1694	1693	1692	1691	1690	1689	1688	1687	1686	1685	1684	1683	1682	1681	1680	1679	1678	1677	1676	1675	1674	1673	1672	1671	1670	1669	1668	1667	1666	1665	1664	1663	1662	1661	1660	1659	1658	1657	1656	1655	1654	1653	1652	1651	1650	1649	1648	1647	1646	1645	1644	1643	1642	1641	1640	1639	1638	1637	1636	1635	1634	1633	1632	1631	1630	1629	1628	1627	1626	1625	1624	1623	1622	1621	1620	1619	1618	1617	1616	1615	1614	1613	1612	1611	1610	1609	1608	1607	1606	1605	1604	1603	1602	1601	1600	1599	1598	1597	1596	1595	1594	1593	1592	1591	1590	1589	1588	1587	1586	1585	1584	1583	1582	1581	1580	1579	1578	1577	1576	1575	1574	1573	1572	1571	1570	1569	1568	1567	1566	1565	1564	1563	1562	1561	1560	1559	1558	1557	1556	1555	1554	1553	1552	1551	1550	1549	1548	1547	1546	1545	1544	1543	1542	1541	1540	1539	1538	1537	1536	1535	1534	1533	1532	1531	1530	1529	1528	1527	1526	1525	1524	1523	1522	1521	1520	1519	1518	1517	1516	1515	1514	1513	1512	1511	1510	1509</

To HIS HIGHNESS THE MARQUIS OF CAMBRIDGE, G.C.B., G.C.V.O.,
THE VISCOUNT IVEAGH, K.P., AND THE SPEAKER OF
THE HOUSE OF COMMONS, *Governors of King Edward's
Hospital Fund for London.*

SIRS,

We have the honour to submit the Fourteenth Annual Statistical Report, prepared by Mr. Maynard from the published accounts of one hundred and nine London Hospitals and from returns made to the Fund.

These Hospitals are :—

- 11 General with Medical Schools and with an average of over 100 beds in daily occupation.
- 8 General without Medical Schools and with an average of over 100 beds in daily occupation.
- 14 Smaller General Hospitals.
- 2 Consumption Hospitals.
- 6 Hospitals for Women.
- 6 Hospitals for Children.
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 14 Cottage Hospitals.
- 8 Lying-in Hospitals.
- 32 Unclassified Hospitals.

109

These Hospitals, taken together with St. Bartholomew's Hospital and the Cancer Hospital, provided a total of 11,406 beds in average daily occupation in 1916. The total number of In-patients admitted during that year was 153,512, while 1,251,019 patients attended at the Out-patient Departments.

Out of the total of 153,512 In-patients, 27,328 were naval and military patients treated by understanding with the authorities; these patients representing an average for the whole year of 2,855 occupied beds, or 25 per cent. of the total average occupied beds.

As compared with 1915 there was an increase of 512 in the average number of beds occupied by naval or military patients, and a decrease of 48 in the beds occupied by civilians, making a net increase of 464, or 4 per cent. in the average number of occupied beds.

It will be noticed that the total average occupied beds was raised from 9,766 in 1913 to 11,406 in 1916, an increase of 1,640 beds; it follows, therefore, that 1,215 of the number of beds occupied by the naval and military patients were taken from those previously used by civilians, the remaining 1,640 beds for war patients being provided for by an increase in the total accommodation at the Hospitals.

The total ordinary expenditure during the year at these Hospitals (with St. Bartholomew's and the Cancer Hospitals), including Maintenance, Administration, Rent, Rates, and Taxes, but excluding capital expenditure, interest on borrowed money, and contributions to the maintenance of Convalescent Homes and Country branches, amounted to £1,513,834. The receipts from the authorities in aid of the expenditure on naval and military patients amounted to £218,087, or over 14 per cent. of the total ordinary expenditure; deducting this from the total outlay of £1,513,834 there remained £1,295,747 to be met out of the normal sources of Hospital revenue.

As the total ordinary expenditure in 1913 was £1,142,938, the London Voluntary Hospitals thus had, in 1916, to provide out of normal sources, as compared with the year before the war, an additional working expenditure of £152,809, or an increase of over 13 per cent.

If 1916 is compared with 1915 the increase of expenditure to be borne by the Hospitals was £104,540, or 8·77 per cent. As the increase in occupied beds was only 4 per cent., and as the increase in work done was wholly due to military patients, and was therefore partly paid for by the War Office capitation grants, the increase in net expenditure must be caused almost entirely by the rise in the cost of all items of maintenance.

As is well known, the cost of drugs and provisions has continually risen during the year under review; while the difficulties of staffing Hospitals have been very largely increased by the urgent demands for Physicians, Surgeons, and Nurses for the Naval and Military Forces.

The increase in total work, with the consequent increase in total expenditure, constitutes an enlarged demand upon the voluntary subscriptions of the charitable public, and renders more than ever important the grants made by this Fund and by the Hospital Sunday and Hospital Saturday Funds.

For reasons explained in the Prefatory Note, comparisons of cost per bed between the current year and the previous year have again been omitted. The average cost at each Hospital, and the average cost of each group of Hospitals, continue, however, to be prepared for the assistance of Hospital Managers in controlling expenditure—the importance of which branch of administration is increased rather than diminished by the unavoidable increase in the total outlay.

We have the honour to be, Sirs,

Your obedient servants,

SOMERLEYTON,

FREDERICK M. FRY,

JOHN G. GRIFFITHS,

Honorary Secretaries.

August 17, 1917.

NOTES.

NOTES ADDED BY THE FUND	50
NOTES SUPPLIED BY THE HOSPITALS	53

PREFATORY NOTE.

THE Statistical Report deals this year with the expenditure in 1916 of 109 Hospitals. These include nearly all the Hospitals which apply for grants from the Fund, as well as some others which very kindly supply the necessary information, and thus enable the Report to be more complete than it would otherwise be.*

Modification of the Report.

The Report this year again appears in a reduced form. This is partly due to motives of economy in cost, in postage, and in paper, and partly to the fact that much of the material which is useful in ordinary times is useless under war conditions. As was pointed out in previous Reports, the cost of working at Hospitals has been affected by the rise of prices, by the shortage of workers both skilled and unskilled, and by changes in the number of occupied beds due to the provision of beds for wounded soldiers.

The last named cause, in particular, affects Hospitals very unequally. Sometimes it operates so as to decrease the number of beds occupied, and thus increase the cost per bed; sometimes so as to increase the number and decrease the cost. In either case it often acts in a manner quite outside the control of the Hospital management.

For these reasons the calculations based on comparisons with average cost have again been omitted.

Total Work and Expenditure in 1916; with Statistics of Naval and Military Patients.

Comparisons of cost per bed between 1916 and previous years have again been omitted, but the following comparisons of total work and total expenditure for 1913, 1914, 1915, and 1916 may be interesting.†

	1913	1914	1915	1916
1. Total beds available	11,472	12,463	13,633	13,814
2. Average beds occupied	9,766	9,867	10,942	11,406
3. Total new in-patients	143,942	149,104	157,510	153,512
4. Total new out-patients	1,409,454	1,429,611	1,333,706	1,251,019
5. Total out-patient attendances	4,978,200	5,119,195	4,912,058	4,745,456
6. Naval or Military in-patients included above :—				
(a) Number treated	—	6,115	28,362	27,328
(b) Total patient-days	—	124,333	854,227	1,045,370
(c) Equivalent average occupied beds for the whole year	—	340	2,343	2,855
7. Civilian in-patients included above :—				
(a) Number treated	143,942	142,989	129,148	126,184
(b) Average occupied beds	9,766	9,527	8,599	8,551
8. Total ordinary expenditure†£	1,142,938	1,211,448	1,342,127	1,513,834
9. Payments by authorities in aid of expenditure on naval or military patients ..£	—	19,500	150,920	218,087
10. Ordinary expenditure falling upon the normal sources of hospital income† ..£	1,142,938	1,191,948	1,191,207	1,295,747
11. Increase of ordinary expenditure over 1913 falling upon the normal sources of hospital income, expressed as a percentage†	—	4.28	4.22	13.36

* See note 21 on page 52.

† In this table the figures of St. Bartholomew's Hospital and Cancer Hospital are included. Country branches and Convalescent Homes are not included. In some cases naval and military patients are treated in these branches as well as at the parent Hospital. The figures for London Cottage Hospital have also been excluded from this table as they are not available for the whole period. The figures of naval and military patients refer to patients treated "by understanding with the authorities." Certain small adjustments have been made in the figures for 1914 and 1915 to bring them into line with the figures available for 1916.

† Ordinary expenditure includes Maintenance, Administration, and Rent, Rates and Taxes, but not interest on loans, contributions in aid of Convalescent Homes or Country branches, or capital expenditure.

Although these changes are the combined result of a number of causes operating at more than one hundred different institutions, the general comparison will give some idea of the way in which the war has affected the work and expenditure of the London voluntary Hospitals taken as a whole.

The average number of occupied beds increased between 1913 and 1916 from 9,766 to 11,406. As 2,855 of these beds were accounted for in 1916 by the admission of naval or military patients, the average number of beds occupied by civilian patients fell from 9,766 to 8,551. To put the same change in another way, the treatment of 27,328 naval or military patients in 1916 was accompanied by a decrease of 17,758 in the number of civilian in-patients, leaving a net increase of 9,570 in the total number of persons admitted to the wards in the course of twelve months.

The total ordinary expenditure, which in 1913 was £1,142,938, had risen in 1916 to £1,513,834, an increase of £370,896. In so far as this increase was due to the treatment of naval or military patients, it was partially covered by contributions from the authorities amounting to £218,087. The balance, amounting to £152,809, represents the additional ordinary expenditure* which fell on the funds of the voluntary Hospitals of London during 1916: an increase of 13·36 per cent. on the expenditure in 1913.

If the figures of 1916 are compared with those for 1915, it will be seen that an increase of 464, or 4 per cent. in the average number of occupied beds, was accompanied by an increase of £171,707, or 12·79 per cent. in the total ordinary expenditure. After making allowance for the amounts received from the Naval and Military authorities, the increase in expenditure falling on the funds of the Hospitals was £104,540, or a further 8·77 per cent., in the course of the year. As all the additional beds were occupied by naval or military patients, and were thus partly paid for by the Authorities, this additional expenditure of £104,540, or 8·77 per cent., represents almost entirely an increase in the cost of working between 1915 and 1916, and illustrates the heavy burden thrown upon the Voluntary Hospitals by the great rise in prices of foods, drugs, and all other requisites—a rise which has continued and must seriously affect the Hospitals in 1917.

It will be noticed that though the average number of beds occupied was larger in 1916 than in 1915, the total number of patients treated was smaller. This was due to the fact that the average length of stay of naval and military patients increased from 30 days to 38 days.

Objects and Methods of the Reports.

The object of the detailed tables in the body of the Report is to assist hospital managers, and others interested, in controlling expenditure, and thus reducing as far as possible that part of the increase in cost which is not represented by an increase in the quantity or quality of the work done. The method adopted is to compare the expenditure at each Hospital with the expenditure at other Hospitals, and with the average of those Hospitals with which it is most comparable. Increases which are common to all

* See note ‡ on page 7.

Hospitals can thus be distinguished from those which are peculiar to any particular institution.

It is not suggested, however, that the lowest expenditure is intended to be taken as a model. All the comparisons are with the average; and even so the Report must not be assumed necessarily to imply any criticism of the excesses above the average. It only gives the figures as matters for investigation on the part of those concerned.

For the purpose of making the comparisons as fair as possible to the various Hospitals and as useful as possible as an aid to the control of expenditure, the following special principles are observed in the preparation of the Reports:—

(a) The comparisons are limited to the items of expenditure which are the more capable of control. Certain items are thus excluded, sometimes because they are liable to wide and unavoidable variations as between one year and another or between one Hospital and another, sometimes because they cannot readily be modified by the Hospital Committees. These include the following, viz.: Repairs and other Establishment Charges, Official Salaries and Pensions, Finance, and Rent, Rates and Taxes.* It will therefore be borne in mind that wherever in this Report a total or an average cost per bed or per out-patient attendance is stated, the figure is exclusive of the above mentioned charges, and that variations in the figures cannot be explained by reference to variations in these items.

(b) The Hospitals are, as far as practicable, arranged in groups, so that the comparisons may be between Hospitals whose work is more or less closely comparable, and the group system is followed in all calculations of averages. This is not intended to prevent comparisons between Hospitals in different groups, a process for which, in fact, special facilities are provided in the preliminary alphabetical tables on pages 24 to 29. In the case of Hospitals which cannot be arranged in groups, the comparisons are confined to the preliminary tables and no group averages are calculated.

(c) The comparisons are made not only for the total expenditure on the various controllable items put together, but also for each of the main sub-heads of expenditure separately, viz.: Provisions, Surgery and Dispensary, Domestic, Salaries and Wages (maintenance), and Management other than Official Salaries and Pensions. This sub-division is intended to facilitate the discovery of the source of any excess which seems to require justification. It must be borne in mind, however, that at Hospitals where direct labour is employed to carry out work (such as, for example, the manufacture of drugs), which at other Hospitals is paid for in the purchase price, there will be a proportionately larger expenditure on Salaries and Wages and a correspondingly smaller expenditure on [say] Surgery and Dispensary or whatever the special heading may be.† Differences due to this cause cancel out in the comparisons of total expenditure.‡

* Tables of expenditure, including all these headings except Rent, Rates and Taxes, can be found in the published Annual Reports of the individual Hospitals.

† Only in the cases of laundry staff and staff employed on annual cleaning or establishment renewals and repairs is this source of difference removed by transfers made in the course of preparing this Report (see notes 14 and 15 on page 51).

‡ Except that in the case of articles purchased the cost includes an allowance for various expenses incurred by the seller (e.g. Rent, Rates, Establishment, Depreciation, etc.) which are not included in this Report in the case of work done on the premises.

Such statistical particulars as are available of the work done at the different Hospitals are set out in the first table relating to each group. This table shows the average length of stay of in-patients, and the average number of attendances per out-patient. In the present issue of the Report, as in the last two, columns are added giving the statistics relating to naval and military patients included in the figures of in-patients.

The group tables are preceded by general alphabetical tables giving particulars of work done, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year) for all the institutions. This introductory section now forms in itself a very nearly complete statistical record of these figures for all the Hospitals of London which observe the Revised Uniform System of Accounts.*

In drawing conclusions from any of the tables it must be understood that they profess to give only the material for a comparison of outlay, and the question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. For this purpose many considerations must be taken into account which will readily occur to those concerned in hospital management. Quite apart from special conditions arising out of the war there may be differences in efficiency or in unavoidable circumstances, as well as in economy of administration. Most of these considerations cannot be expressed in statistics at all; others could not be included in a manageable form in a report dealing with more than one hundred Hospitals. This Report will have served its purpose if it stimulates inquiry into the causes of high cost and assists hospital managers to see in what departments the source of the excess is to be found, and to reduce it wherever it cannot be justified.

H. R. MAYNARD,
Secretary.

August 17, 1917.

* See note 22 on page 52.

SECTION III.—LAUNDRY EXPENSES.

(Omitted this year.)

SECTION IV.—PRICES.

(Omitted this year.)

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

Where no entry appears the Hospitals are unable to divide their beds under these headings.

The *Royal London Ophthalmic* returns the number of beds as 188, 18 being empty in 1916.

(2) In the case of *St. Thomas's Hospital* the 44 paying beds are not included in the average number of beds in daily occupation, namely 768-87, and have been deducted in giving the total number of beds in the Hospital, namely 980. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them.

(3) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and Others is based on figures supplied by the Hospitals; but the definition of a casualty differs in different Hospitals.

(4) The *Eltham and Mottingham Cottage Hospital*, the *Finchley Cottage Hospital*, the *Hornsey Cottage Hospital*, the *Passmore Edwards Cottage Hospital*, *Willesden*, the *Passmore Edwards Cottage Hospital*, *Wood Green*, the *Wimbledon Hospital*, and the *Woolwich and Plumstead Cottage Hospital*, although having no general Out-Patients' Department, treat a small number of casualties, the cost of which is included in that of the In-Patients.

(5) The *Clapham Maternity Hospital* treats a small number of Out-patients at the In-patient Department at Clapham, and the cost of these Out-patients is included in the cost per bed.

(6) *Naval and Military Patients*.—The figures in the three columns at the end of the table on pages 13, 15 and 17 and in Table I. of Groups I. to IX. are taken from special returns supplied by the Hospitals. They show the total amount of work done in 1916, "by understanding with the authorities" for Naval and Military In-Patients, and, by comparison with the figures given in the earlier columns of these tables, the proportion which this work bears to the total work done during that year. Naval and Military Patients treated otherwise than "by understanding with the authorities" are not included in these special columns.

As a general rule, the expenditure on naval and military patients is included in the figures of expenditure and consequently in the cost per bed and in the group averages. The exceptions are *King's College Hospital*, the *Metropolitan Hospital* and *St. Thomas's Hospital*, where the relation of military beds to civil beds is such as to render the figures not comparable with those of other hospitals; and the *Royal Hospital for Diseases of the Chest*, which ceased to take civil patients after July 1, 1915.

It will also be noticed that the larger proportion of patients treated at the *Royal National Orthopaedic Hospital* were military patients.

(7) *St. John's Hospital, Lewisham*.—The cost of the Bacteriological and X-Ray work done for the Lewisham Borough Council, the Lewisham Board of Guardians, and the Chatteris Urban District Council, is not included in the figures in this Report.

(8) *Consumption Hospitals*.—The figures relating to Country Branches are not included in this Report.

(9) *Lying-in Hospitals*.—The figures relating to the Training Schools of the various hospitals in this group are not included in this Report.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of St. Vincent de Paul. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages in Group III., Table II., with the result that the averages for Salaries and Wages and for total cost are not reduced by the low figure for Salaries and Wages at this Hospital.

(11) The *Passmore Edwards Cottage Hospital*, Acton. The Hospital is now called "The Acton Hospital."—The cost of the District Nursing Institution, Invalid Kitchen, and Dispensary, is not included in the figures in this Report.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 15 and 20 below).

(13) *Provisions*.—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. At some Hospitals, however, the nurses return to the wards after taking private cases; during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic*.—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," "Establishment Charges," and "Rent, Rates and Taxes," as shown in the washing returns published by these hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. The Tables showing the cost of washing usually appearing as Section III. of this Report are not published this year.

(15) *Establishment and Salaries and Wages*.—Comparisons of cost under the separate heads, and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences under the several heads cancel one another in the final columns giving total cost for all the headings combined.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses*.—For the purposes of this Report the total Management Expenses are divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain hospitals patients are required, unless too poor, to provide certain articles of food. These are as follows: *London Homoeopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *London Temperance*, tea and sugar; *Middlesex*, tea and sugar; *Stoke Newington*, sugar; *University College*, tea and sugar.

(18) *Average Number of Beds in Daily Occupation*.—These figures are obtained by dividing the Number of Patient Days as supplied by the hospitals by the number of days in the year 1916, viz., 366.

(19) (a) *Average Number of Days each Patient was Resident*.—These figures are given by the hospitals in their Statistical Tables.

(b) The Group Averages are obtained by dividing the total number of Patient Days by the total number of patients treated to a conclusion, i.e., the number of In-Patients in the hospitals at the beginning of the year plus those admitted during the year minus those in the hospitals at the end of the year.

(20) The totals and general averages corresponding to the columns marked (b) in Section I., Table I., for the different groups of hospitals, are as follows:—

1 Group of Hospitals	2 3 4 5 IN-PATIENTS				6 7 8 OUT-PATIENTS			9 10 11 Naval or Military Patients* (Included in In-Patients)		
	Beds		Total number of New In-Patients	Average number of days each Patient was resident	Total new Out-Patients	Total Attendances	Average number of Attendances per Out-Patient	Number treated in 1916	Total Patient days represented by these Patients	Number of Average Occupied Beds for the year represented by these Patients

* These figures relate to Naval or Military Patients admitted by understanding with the Authorities. (See note 6 on page 50.)

† The Hospitals named in note 6 on page 50 are not included in the averages in columns 5 and 8, but are included in all the other columns. St. Bartholomew's Hospital and the Cancer Hospital are not included in any part of the table.

‡ The Mildmay Mission Hospital, in consequence of being closed during a great part of the year, is excluded from these averages.

(21) The issue of these Reports was begun by Mr. J. Danvers Power, M.V.O., with the figures of 16 Hospitals for 1908. But the earlier ones contained confidential matter, and the first Report published was that for 1908.

(22) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a book issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 28 Fumival Street, Holborn, E.C. (3rd edition, August 1914, price 1s. 9d. post free). The System was drawn up by the three Funds after reports on the subject by Mr. John G. Griffiths, C.V.O., F.C.A., and a Committee of Hospital Secretaries.

NOTES RELATING TO THE ITEMS DEALT WITH IN THIS REPORT PRINTED IN COURTESY TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE KINDLY SUPPLIED.

(23) *Bolingbroke Hospital*.—"The extra cost per bed and out-patient attendance is solely due to the continual increased cost of food and other articles required for maintenance, and also to the high cost of labour."

(24) *Charing Cross Hospital*.—"The increased cost per bed and per out-patient attendance under 'Provisions' is due to the great advance which has taken place in prices.

"The cost per out-patient attendance under 'Salaries and Wages' is higher owing to the development of the Tuberculosis Dispensary and the Maternity and Child Welfare Clinics, necessitating the payment of salaries to the Medical Officers of these Departments."

(25) *Chelsea Hospital for Women*.—"The statistics for 1916 are considerably affected, and adversely, by—

"1. The change from the old to the new building and consequent total cessation of work in July and partial cessation in June and August; and

"2. The compulsory use in the new Hospital, until the Nurses' Home is built, of 23 beds for part of the nursing and domestic staffs."

(26) *Finchley Cottage Hospital*.—"I. It will be observed that the chief items showing increased expenditure are:—

"(1) Provisions £80. 14s. (2) Surgery and Dispensary £44. 11s. 2d.

"This is entirely due to the unavoidable increases caused by the present times.

"II. Under the other headings a decrease will be observed, and is due to watchful and painstaking economy.

"III. Owing to the general rise in prices, together with the fewer patients admitted and also to the slightly longer stay in the Hospital, the cost per patient per week has risen from £1. 8s. 6d. to £1. 10s. 5d., and the total cost per patient treated to a conclusion from £4. 9s. 6d. to £5. 12s. 7d.

"IV. The number of Patient days in 1916 is greater by 112 than that for 1915, although 30 fewer Patients have been admitted. This is due to several cases of long duration, the average length of stay having increased from 22 to 25 days.

"V. The Hospital has been full throughout the year, and there has been a Waiting List, on most occasions more than sufficient to refill the empty Hospital. The number on the Waiting List to-day is 22."

(27) *Hampstead General Hospital*.—"A Special Committee of Enquiry is at present making an exhaustive examination of all the items of expenditure to ensure that no avoidable expense is incurred."

(28) *London Homoeopathic Hospital*.—"Special attention is given to the training of Nurses. Over 40 Nurses trained at the Hospital are nursing in the Military Hospitals.

"There are no Paying Probationers, therefore no 'Fee' to reduce nursing cost.

"There has to be a larger number of Nurses on the Staff than in Hospitals with Medical Schools, the Nurses doing the work (dressings, &c.) done by Students in Medical Schools.

"In addition to the 90 beds for civilian patients, 75 beds have been accepted by the Admiralty for Naval casualties.

"In view of the very considerable increase in cost of provisions, the increased cost per bed must inevitably follow."

(29) *Metropolitan Hospital*.—"Special provision is made for Jewish Patients, Jewish Cook, Jewish Kitchen, and Jewish Wards.

"The Resident Medical Officers give all anaesthetics.

"Special attention is given to the training of Nurses."

(30) *National Hospital for Diseases of the Heart*.—"The cost per head was unavoidably greater than in 1915 owing to the increased cost of food, drugs, fuel, &c.

"The necessity of paying the Resident Medical Officer a much larger salary than had hitherto been allowed, and higher wages, led to an increase in Salaries V."

(31) *Paddington Green Children's Hospital*.—"In-patient Department.—Owing to an outbreak of 'Mumps' in the Wards the admission of cases during February and March was greatly restricted, and the number of beds occupied daily between 15th February and 16th March fell from an average of 88 in the three previous years to 19 only in 1916.

"Out-Patient Department. Cost of each Out-patient Attendance.—The supplies of medicines, surgical dressings, &c., given to Out-patients were as follows:

Supply for	7 days	18,980=18,980
"	14 "	22,842=45,684
"	21 "	3,014= 9,042
"	28 "	3,978=13,512
		43,214
		82,218=weekly supplies given.

Advice and treatment only 3,879

Total attendances as registered and charged to the Department 47,098 "

(32) *Poplar Hospital*.—"Please note in regard to the cost of Out-patients that we do not make any patients coming to the Casualty Department 'Medical Out-patients.' Our Out-patient Department, as distinguished from the Casualty Department, treats 'Surgical Out-patients' only."

(33) *Royal Hospital for Diseases of the Chest*.—"As stated last year, the whole of the bed accommodation has been set aside for sick and wounded soldiers, the In-patients Department of the Hospital now being an Auxiliary of the City of London Military Hospital, Homerton. This arrangement came into force in July 1915, and will continue for the period of the War.

"The work of the Out-patient Department is being carried on as in the past.

"In April 1917, at the request of the War Office, accommodation was provided for 81 additional beds, making the total accommodation 112 beds."

(34) *Royal Waterloo Hospital*.—"The Management wish to state that the shortage of doctors has necessitated a restriction of the attendance of Out Patients, with the result that the numbers have been reduced from 47,000 (1913) to 17,962 (1916).

"It should, however, be noted that these 17,962 attendances represent urgent cases only."

(35) *St. George's Hospital*.—"The increase in the cost per occupied bed is attributable to the very great increase in the cost of all provisions, drugs, fuel, &c., and to the fact that it was found necessary to increase the wages of the female servants, and to grant War Bonuses to the male servants.

"It may also be pointed out that there is again a low daily average, which is accounted for by the number of beds set aside for military cases not being immediately filled when vacant.

"Attention is also drawn to the average length of stay of each patient, which is 26.25 days, and which is a criterion of the serious nature of the majority of cases admitted.

"In some cases the patients get their personal washing done themselves, but in the large majority of cases Hospital garments are used and are washed at the Hospital's expense."

(36) *Westminster Hospital*.—"The abnormal average cost of each In-patient, viz., £12. 8s. 10d., is accounted for partly by the continuous rise in prices and partly by a diminution in the number of patients admitted in consequence of the increase in the average number of days during which the Military patients were resident, which was 74 in the year 1916."

1920

To HIS HIGHNESS THE MARQUIS OF CAMBRIDGE, G.C.B., G.C.V.O.
THE VISCOUNT IVEAGH, K.P., AND THE SPEAKER OF
THE HOUSE OF COMMONS, *Governors of King Edward's
Hospital Fund for London.*

SIRS,

We have the honour to submit the Fifteenth Annual Statistical Report, prepared by Mr. Maynard from the published accounts of one hundred and eight London Hospitals and from returns made to the Fund.

These Hospitals are :—

- 11 General with Medical Schools and with an average of over 100 beds in daily occupation.
- 8 General without Medical Schools and with an average of over 100 beds in daily occupation.
- 13 Smaller General Hospitals.
- 2 Consumption Hospitals.
- 6 Hospitals for Women.
- 6 Hospitals for Children.
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 14 Cottage Hospitals.
- 8 Lying-in Hospitals.
- 32 Unclassified Hospitals.

108

These Hospitals, taken together with St. Bartholomew's Hospital and the Cancer Hospital, provided a total of 11,729 beds in average daily occupation in 1917. The total number of In-patients admitted during that year was 147,598, while 1,152,022 patients attended at the Out-patient Departments.

Out of the total of 147,598 In-patients, 28,013 were naval and military patients treated by understanding with the authorities, these patients representing an average for the whole year of 3,656 occupied beds, or 31 per cent. of the total average occupied beds.

The average number of occupied beds in 1913 was 9,732; this number has been steadily increased yearly until, in 1917, the number was 11,729.

The number of these beds occupied by Naval and Military patients in 1917 was 3,656, an increase, over 1916, of 801 beds.

The result of the demand for beds on account of the war has, therefore, been that, while there has been an increase of 1,997 in the beds provided, the number of beds available for civilian patients has been reduced by 1,659.

The total ordinary expenditure during the year at these Hospitals (with St. Bartholomew's and the Cancer Hospitals), including Maintenance, Administration, Rent, Rates, and Taxes, but excluding capital expenditure, interest on borrowed money, and contributions to the maintenance of Convalescent Homes and Country branches, amounted to £1,719,030. The receipts from the authorities in aid of the expenditure on naval and military patients amounted to £268,960, or over 14 per cent. of the total ordinary expenditure; deducting this from the total outlay of £1,719,030 there remained £1,450,070 to be met out of the normal sources of Hospital revenue.

As the total ordinary expenditure in 1913 was £1,138,530, the London voluntary Hospitals thus had, in 1917, to provide out of normal sources, as compared with the year before the war, an additional working expenditure of £311,540, or an increase of 27·36 per cent. The corresponding increase in 1915 was only about 4 per cent., and that in 1916, 13 per cent. Not only has Hospital expenditure therefore risen considerably during the war, but it continues to rise at an accelerating rate.

The expenditure to be borne by the Hospitals in 1917 exceeded that of 1916 by £158,348; an additional cost, in one year, of 12½ per cent. As the increase in occupied beds was only 3 per cent., and as the increase in work done was wholly occasioned by Military patients, and was therefore partly paid for by the War Office capitation grants, the addition to the net annual expenditure must, we believe, have been caused almost entirely by the rise in the cost of all items of maintenance.

The increase in total work, with the consequent increase in total expenditure, constitutes an enlarged and very urgent demand upon the voluntary subscriptions of the charitable public, and renders it more than ever important that this Fund and the Hospital Sunday and Hospital Saturday Funds should be enabled to increase their grants.

For reasons explained in the Prefatory Note, comparisons of cost per bed between the current year and the previous year have again been omitted. The average cost at each Hospital, and the average cost of each group of Hospitals, continue, however, to be prepared for the assistance of Hospital Managers in controlling expenditure—the importance of which branch of administration is increased rather than diminished by the unavoidable increase in the total outlay.

We have the honour to be, Sirs,

Your obedient servants,

SOMERLEYTON,

FREDERICK M. FRY,

JOHN G. GRIFFITHS,

Honorary Secretaries.

September 30th, 1918.

PREFATORY NOTE.

THE Statistical Report deals this year with the expenditure in 1917 of 108 Hospitals. These include nearly all the Hospitals which apply for grants from the Fund.*

Modification of the Report.

The Report this year again appears in a reduced form. This is partly due to motives of economy in cost, in postage, and in paper, and partly to the fact that much of the material which is useful in ordinary times is useless under war conditions. As was pointed out in previous Reports, the cost of working at Hospitals has been affected by the rise of prices, by the shortage of workers both skilled and unskilled, and by changes in the number of occupied beds due to the provision of beds for wounded soldiers.

The last named cause, in particular, affects Hospitals very unequally. Sometimes it operates so as to decrease the number of beds occupied, and thus increase the cost per bed; sometimes so as to increase the number and decrease the cost. In either case it often acts in a manner quite outside the control of the Hospital management.

For these reasons the calculations based on comparisons with average cost have again been omitted.

Total Work and Expenditure in 1917; with Statistics of Naval and Military Patients.

Comparisons of cost per bed between 1917 and previous years have again been omitted, but the following comparisons of total work and total expenditure for 1913, 1916, and 1917 may be interesting.†

	1913	1916	1917
1. Total beds available	11,436	13,774	13,888
2. Average beds occupied	9,732	11,385	11,729
3. Total new in-patients	143,665	153,332	147,598
4. Total new out-patients	1,402,258	1,243,081	1,152,022
5. Total out-patient attendances	4,943,974	4,708,380	4,474,946
6. Naval or Military in-patients included above:—			
(a) Number treated	—	27,328	28,013
(b) Total patient-days	—	1,045,370	1,334,455
(c) Equivalent average occupied beds for the whole year	—	2,855	3,656
7. Civilian in-patients included above:—			
(a) Number treated	143,665	126,004	119,585
(b) Average occupied beds	9,732	8,530	8,073
8. Total ordinary expenditure‡	£1,138,530	£1,509,809	£1,719,030
9. Payments by authorities in aid of expenditure on naval or military patients	—	£218,087	£268,960
10. Ordinary expenditure falling upon the normal sources of hospital income‡	£1,138,530	£1,291,722	£1,450,070
11. Increase of ordinary expenditure over 1913 falling upon the normal sources of hospital income, expressed as a percentage‡	—	13.45	27.36

* See note 22 on page 52.

† In this table the figures of St. Bartholomew's Hospital and Cancer Hospital are included. Country branches and Convalescent Homes are not included. In some cases naval and military patients are treated in these branches as well as at the parent Hospital. The figures for Hendon Cottage Hospital have also been excluded from this table as they are not available for the whole period. The figures of naval and military patients refer to patients treated "by understanding with the authorities." Certain small adjustments have been made in the figures for 1913 and 1916 to bring them into line with the figures available for 1917. The figures for 1914 and 1915 will be found in the Statistical Report for 1916.

‡ Ordinary expenditure includes Maintenance, Administration, and Rent, Rates and Taxes, but not interest on loans, contributions in aid of Convalescent Homes or Country branches, or capital expenditure.

Although these changes are the combined result of a number of causes operating at more than one hundred different institutions, the general comparison will give some idea of the way in which the war has affected the work and expenditure of the London voluntary Hospitals taken as a whole.

The average number of occupied beds increased between 1913 and 1917 from 9,732 to 11,729. As 3,656 of these beds were accounted for in 1917 by the admission of naval or military patients, the average number of beds occupied by civilian patients fell from 9,732 to 8,073. To put the same change in another way, the treatment of 28,013 naval or military patients in 1917 was accompanied by a decrease of 24,080 in the number of civilian in-patients, leaving a net increase of 3,933 in the total number of persons admitted to the wards in the course of twelve months.

The total ordinary expenditure, which in 1913 was £1,138,530, had risen in 1917 to £1,719,030, an increase of £580,500. In so far as this increase was due to the treatment of naval or military patients, it was partially covered by contributions from the authorities amounting to £268,960. The balance, amounting to £311,540, represents the additional ordinary expenditure* which fell on the funds of the voluntary Hospitals of London during 1917: an increase of 27·36 per cent. on the expenditure in 1913.

If the figures of 1917 are compared with those for 1916, it will be seen that an increase of 344, or 3 per cent. in the average number of occupied beds, was accompanied by an increase of £209,221, or 13·85 per cent. in the total ordinary expenditure. After making allowance for the amounts received from the naval and military authorities, the increase in expenditure falling on the funds of the Hospitals was £158,348, or a further 12·26 per cent., in the course of the year. As all the additional beds were occupied by naval or military patients, and were thus partly paid for by the Authorities, this additional expenditure of £158,348, or 12·26 per cent., represents almost entirely an increase in the cost of working between 1916 and 1917. The heavy additional burden already thrown upon the voluntary Hospitals by the great rise in prices of foods, drugs, and all other requisites, had thus more than doubled during the year.

Objects and Methods of the Reports.

The object of the detailed tables in the body of the Report is to assist hospital managers, and others interested, in controlling expenditure, and thus reducing as far as possible that part of the increase in cost which is not represented by an increase in the quantity or quality of the work done. The method adopted is to compare the expenditure at each Hospital with the expenditure at other Hospitals, and with the average of those Hospitals with which it is most comparable. Increases which are common to all Hospitals can thus be distinguished from those which are peculiar to any particular institution.

It is not suggested, however, that the lowest expenditure is intended to be taken as a model. All the comparisons are with the average; and even so the

* See note † on page 7.

Report must not be assumed necessarily to imply any criticism of the excesses above the average. It only gives the figures as matters deserving the careful investigation of those concerned.

For the purpose of making the comparisons as fair as possible to the various Hospitals and as useful as possible as an aid to the control of expenditure, the following special principles are observed in the preparation of the Reports:—

(a) The comparisons are limited to the items of expenditure which are the more capable of control. Certain items are thus excluded, sometimes because they are liable to wide and unavoidable variations as between one year and another or between one Hospital and another, sometimes because they cannot readily be modified by the Hospital Committees. These include the following, viz.: Repairs and other Establishment Charges, Official Salaries and Pensions, Finance, and Rent, Rates and Taxes.* It will therefore be borne in mind that wherever in this Report a total or an average cost per bed or per out-patient attendance is stated, the figure is exclusive of the above-mentioned charges and that variations in the figures cannot be explained by reference to variations in these items.

(b) The Hospitals are, as far as practicable, arranged in groups, so that the comparisons may be between Hospitals whose work is more or less closely comparable, and the group system is followed in all calculations of averages. This is not intended to prevent comparisons between Hospitals in different groups, a process for which, in fact, special facilities are provided in the preliminary alphabetical tables on pages 24 to 29. In the case of Hospitals which cannot be arranged in groups, the comparisons are confined to the preliminary tables and no group averages are calculated.

(c) The comparisons are made not only for the total expenditure on the various controllable items put together, but also for each of the main sub-heads of expenditure separately, viz.: Provisions, Surgery and Dispensary, Domestic, Salaries and Wages (maintenance), and Management other than Official Salaries and Pensions. This sub-division is intended to facilitate the discovery of the source of any excess which seems to require justification. It must be borne in mind, however, that at Hospitals where direct labour is employed to carry out work (such as, for example, the manufacture of drugs), which at other Hospitals is paid for in the purchase price, there will be a proportionately larger expenditure on Salaries and Wages and a correspondingly smaller expenditure on [say] Surgery and Dispensary or whatever the special heading may be.† Differences due to this cause cancel out in the comparisons of total expenditure.‡

Such statistical particulars as are available of the work done at the different Hospitals are set out in the first table relating to each group. This table shows the average length of stay of in-patients, and the average number of attendances per out-patient. In the present issue of the Report, as in the

* Tables of expenditure, including all these headings except Rent, Rates and Taxes, can be found in the published Annual Reports of the individual Hospitals.

† Only in the cases of laundry staff and staff employed on annual cleaning or establishment renewals and repairs is this source of difference removed by transfers made in the course of preparing this Report (see notes 14 and 15 on page 51).

‡ Except that in the case of articles purchased the cost includes an allowance for various expenses incurred by the seller (e.g. Rent, Rates, Establishment, Depreciation, etc.) which are not included in this Report in the case of work done on the premises.

last two, columns are added giving the statistics relating to naval and military patients included in the figures of in-patients.

The group tables are preceded by general alphabetical tables giving particulars of work done, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year) for all the institutions. This introductory section now forms in itself a very nearly complete statistical record of these figures for all the Hospitals of London which observe the Revised Uniform System of Accounts.*

In drawing conclusions from any of the tables it must be understood that they profess to give only the material for a comparison of outlay, and the question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. For this purpose many considerations must be taken into account which will readily occur to those concerned in hospital management. Quite apart from special conditions arising out of the war there may be differences in efficiency or in unavoidable circumstances, as well as in economy of administration. Most of these considerations cannot be expressed in statistics at all; others could not be included in a manageable form in a report dealing with more than one hundred Hospitals. This Report will have served its purpose if it stimulates inquiry into the causes of high cost and assists hospital managers to see in what departments the source of the excess is to be found, and to reduce it wherever it cannot be justified.

H. R. MAYNARD,
Secretary.

September 30th, 1918.

The small figures refer to the notes on pages 50 to 55, and before drawing conclusions from any of these Tables general reference should be made to these notes.

SECTION III.—LAUNDRY EXPENSES.

(Omitted this year.)

SECTION IV.—PRICES.

(Omitted this year.)

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

In some cases the Hospitals are unable to divide their beds under the headings indicated.

The *Royal London Ophthalmic* returns the number of beds as 138, 18 being empty in 1917.

(2) In the case of *St. Thomas's Hospital* the 34 paying beds are not included in the average number of beds in daily occupation, namely 876.5, and have been deducted in giving the total number of beds in the Hospital, namely 980. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them.

(3) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and Others is based on figures supplied by the Hospitals; but the definition of a casualty differs in different Hospitals.

(4) The *Blackheath and Charlton Hospital*, the *Eltham and Mottingham Cottage Hospital*, the *Finchley Cottage Hospital*, the *Hornsey Cottage Hospital*, the *Passmore Edwards Cottage Hospital*, *Willesden*, the *Passmore Edwards Cottage Hospital*, *Wood Green*, the *Wimbledon Hospital*, and the *Woolwich and Plumstead Cottage Hospital*, although having no general Out-Patients' Department, treat a small number of casualties, the cost of which is included in that of the In-Patients.

(5) The *Clapham Maternity Hospital* treats a small number of Out-patients at the In-patient Department at Clapham, and the cost of these Out-patients is included in the cost per bed.

(6) *Naval and Military Patients*.—The figures in the three columns at the end of the table on pages 13, 15 and 17 and in Table I. of Groups I. to IX. are taken from special returns supplied by the Hospitals. They show the total amount of work done in 1917, "by understanding with the authorities" for Naval and Military In-Patients, and, by comparison with the figures given in the earlier columns of these tables, the proportion which this work bears to the total work done during that year. Naval and Military Patients treated otherwise than "by understanding with the authorities" are not included in these special columns.

As a general rule, the expenditure on naval and military patients is included in the figures of expenditure and consequently in the cost per bed and in the group averages. The exceptions are *King's College Hospital*, the *Metropolitan Hospital* and *St. Thomas's Hospital*, where the relation of military beds to civil beds is such as to render the figures not comparable with those of other hospitals; and the *Royal Hospital for Diseases of the Chest*, which ceased to take civil patients after July 1, 1915.

It will also be noticed that the larger proportion of patients treated at the *Royal National Orthopaedic Hospital* were military patients.

(7) *St. John's Hospital, Lewisham*.—The cost of the Bacteriological and X-Ray work done for the Lewisham Borough Council, the Lewisham Board of Guardians, and the Chatteris Urban District Council, is not included in the figures in this Report.

(8) *Consumption Hospitals*.—The figures relating to Country Branches are not included in this Report.

(9) *Lying-in Hospitals*.—The figures relating to the Training Schools of the various hospitals in this group are not included in this Report.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of St. Vincent de Paul. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages in Group III., Table II., with the result that the averages for Salaries and Wages and for total cost are not reduced by the low figure for Salaries and Wages at this Hospital.

(11) The *Passmore Edwards Cottage Hospital*, Acton. The Hospital is now called "The Acton Hospital."—The cost of the District Nursing Institution, Invalid Kitchen, and Dispensary, is not included in the figures in this Report.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 15 and 20 below).

(13) *Provisions*.—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. At some Hospitals, however, the nurses return to the wards after taking private cases; during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic*.—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," "Establishment Charges," and "Rent, Rates and Taxes," as shown in the washing returns published by these hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. The Tables showing the cost of washing usually appearing as Section III. of this Report are not published this year.

(15) *Establishment and Salaries and Wages*.—Comparisons of cost under the separate heads, and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences under the several heads cancel one another in the final columns giving total cost for all the headings combined.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses*.—For the purposes of this Report the total Management Expenses are divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain hospitals patients are required, unless too poor, to provide certain articles of food. These are as follows: *London Homœopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *London Temperance*, tea and sugar; *Middlesex*, tea and sugar; *Stoke Newington*, sugar; *University College*, tea and sugar.

(18) The following hospitals treated patients in return for grants under the scheme of the Local Government Board for the diagnosis and treatment of venereal diseases, viz.:—*Charing Cross*, *Seamen's (Dreadnought)*, *Great Northern Central*, *Guy's*, *Hospital for Sick Children*, *King's College*, *London*, *London Lock*, *Middlesex*, *Miller*, *New for Women (now Elizabeth Garrett Anderson Hospital)*, *Royal Free*, *St. George's*, *St. Mary's*, *St. Thomas's*, *University College*, *West London*, *Westminster*.

As the cost of such patients is usually greater than the average, this tends to raise the cost per bed and per attendance at these hospitals.

(19) *Average Number of Beds in Daily Occupation*.—These figures are obtained by dividing the Number of Patient Days as supplied by the hospitals by the number of days in the year 1917, viz., 365.

(20) (a) *Average Number of Days each Patient was Resident*.—These figures are given by the hospitals in their Statistical Tables.

(b) The Group Averages are obtained by dividing the total number of Patient Days by the total number of patients treated to a conclusion, i.e., the number of In-Patients in the hospitals at the beginning of the year plus those admitted during the year minus those in the hospitals at the end of the year.

(21) The totals and general averages corresponding to the columns marked (b) in Section I., Table I., for the different groups of hospitals, are as follows:—

1 Group of Hospitals	2 3 4 5 IN-PATIENTS				6 7 8 OUT-PATIENTS			9 10 11 Naval or Military Patients* (Included in In-Patients)		
	Beds		Total number of New In-Patients	Average number of days each Patient was resident	Total new Out-Patients	Total Attendances	Average number of Attendances per Out-Patient	Number treated in 1917	Total Patient days represented by these Patients	Number of Average Occupied Beds for the year represented by these Patients

* These figures relate to Naval or Military Patients admitted by understanding with the Authorities. (See note 6 on page 50.)

† The Hospitals named in note 6 on page 50 are not included in the averages in columns 5 and 8, but are included in all the other columns. St. Bartholomew's Hospital and the Cancer Hospital are not included in any part of the table.

‡ The Mildmay Mission Hospital, in consequence of being closed during a great part of the year, is excluded from these averages.

(22) The issue of these Reports was begun by Mr. J. Danvers Power, M.V.O., with the figures of 16 Hospitals for 1908. But the earlier ones contained confidential matter, and the first Report published was that for 1908.

(23) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a book issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 23 Farnival Street, Holborn, E.C. (3rd edition, August 1914, price 1s. 9d. post free). The System was drawn up by the three Funds after reports on the subject by Mr. John G. Griffiths, C.V.O., F.C.A., and a Committee of Hospital Secretaries.

NOTES RELATING TO THE ITEMS DEALT WITH IN THIS REPORT PRINTED IN COURTESY
TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE KINDLY SUPPLIED.

(24) *Bolingbroke Hospital*.—"The total cost of each in-patient is reduced; but the high prices which have to be paid for all articles used in the hospital have prevented any reduction in the cost of individual treatment."

(25) *Charing Cross Hospital*.—"The increased cost per bed and per out-patient attendance is due to the increased cost of all necessities, as well as to higher salaries and wages which the Council are under the necessity of paying."

"Apart from the above, the cost per out-patient attendance is higher on account of the expenditure in connection with the General Department."

(26) *Chelsea Hospital for Women*.—"The cost per bed is high owing

"1. To 25 per cent. of the beds being unavailable until the Nurses' Home can be built.

"2. To the necessity in 1917 of closing the Hospital for two months.

"3. To having to cater for fifty wounded officers, the large majority of whom have been 'walking' cases.

"4. To the high prices."

(27) *General Lying-in Hospital, York Road*.—"The increase in Cost per Bed is caused by continued rise in prices of food, drugs, dressings and other items."

(28) *Great Northern Central Hospital*.—"The average cost per Out-patient attendance has been affected materially by the inclusion of the figures for the Tuberculosis Department and the Venereal Diseases Department. Had the cost and respective attendances of these Departments been excluded from the Out-patient Statistics the approximate cost of an Out-patient attendance would have been 1s. 7d. compared with 1s. 3.52d."

(29) *Hampstead General and North West Hospital*.—"It will be noticed that, this year, in accordance with the requirement of the King's Fund, the cost of maintaining the ambulance has been included in the General Expenditure account; thus establishment charges appear relatively higher."

(30) *The Hospital for Women, Soho Square*.—"During the year 1917 all the wards were closed for one month each in rotation for annual cleaning purposes, and to facilitate the holiday arrangements of the Honorary Medical, Nursing, and Domestic Staffs. The Out-patient Department was also entirely closed for two months for the same reasons. The numbers of Patients treated during the year, both in and out, were therefore fewer, and the cost per bed, and also the cost for Out-patient attendance, were correspondingly increased."

(81) *London Homœopathic Hospital*.—"Special attention is given to the training of Nurses. Over 40 Nurses trained at the Hospital are nursing in the Military Hospitals.

"There are no Paying Probationers, therefore no 'Fee' to reduce nursing cost.

"There has to be a larger number of Nurses on the Staff than in Hospitals with Medical Schools, the Nurses doing the work (dressings, &c.) done by Students in Medical Schools.

"In addition to the 90 beds for civilian patients, 85 beds have been accepted by the Admiralty for Naval casualties.

"The number of 'Patient-days' in 1917 is greater, being 35½ against 33½ in 1916. This is due to several cases of long duration.

"In view of the very considerable increase in cost of provisions, the increased cost per bed must inevitably follow."

(82) *Metropolitan Hospital*.—"Special provision is made for Jewish Patients, Jewish Cook, Jewish Kitchen, and Jewish Wards.

"Special attention is given to the training of Nurses. There is no Medical School attached."

(83) *Mildmay Mission Hospital, Austin Street, Bethnal Green*.—"This Hospital was open for seven and a-half months only in 1917, owing to the reconstruction of the drainage system. During that time 82 beds were available."

(84) *National Hospital for Diseases of the Heart*.—"The Laundry has raised its charges considerably.

"The increased cost per bed is due to higher prices of food, drugs, fuel, &c. Uniforms have cost more, owing to changes in porters and large price of materials; necessary repairs and higher wages have added to cost. These causes of increase also apply to the cost per Out-patient attendance."

(85) *New Hospital for Women (Elizabeth Garrett Anderson), Euston Road*.—"The decrease in numbers of both In and Out Patients is largely due to the fact that the Hospital was closed entirely for a month in the summer, during the installation of a new hot-water cylinder."

(86) *Poplar Hospital*.—"Please note in regard to Out-patients that we do not make any patients coming to the Casualty Department 'Medical Out-patients.' Our Out-patient Department, as distinguished from the Casualty Department, treats 'Surgical Out-patients' only."

(87) *Prince of Wales's General Hospital, Tottenham*.—"One ward has been vacant during the greater part of the year, as it is considered dangerous in case of Raids. Patients have refused to come in and have asked to be discharged, owing to its exposed position.

"This has materially affected the daily average of beds occupied.

"On the other hand, the number of patients admitted during the year is the highest on record: this also applies to the number of operations.

"The large proportion of Major Operations performed naturally adds to the cost of maintenance."

(88) *Queen's Hospital for Children*.—"The Committee have experienced great difficulty in keeping down expenditure during the year, and are again conducting a searching investigation into all items, with a view to reducing the cost of the In-patient work.

"Two special matters, connected with War conditions, adversely affected the cost per bed in 1917:

"(a) A deficiency in the number of Nurses available. It was found to be impossible to keep the wards full during most part of the year owing to the nursing staff not being at full strength. None of the wards was closed from this cause, but the strain on the nurses was relieved by some empty beds being left in each ward.

"(b) The arrangements for the removal of patients from the upper wards during Air Raids. This necessitated the closing of the large Surgical Ward on the top floor of the old building while shutters were being provided for the windows of the lower rooms to which the patients could be removed. A loss of 31 beds for three weeks thus occurred and an expenditure of £142 was entailed.

"The daily average of occupied beds was thus greatly reduced, and the calculated cost per in-patient per week correspondingly increased."

(89) *Royal Hospital for Diseases of the Chest*.—"To meet the requirements of the three Funds the Income and Expenditure of the Hospital's Tuberculosis Dispensary Department is now included in the General Fund Account of the Hospital, and the Patients' attendances in that department are now counted with the ordinary Out-patients in the Statistical Table.

"The increase in the cost per out-patient attendance and per out-patient from 1s. 10d. and 9s. 6d. to 2s. 7d. and 13s. 11d. respectively is partly due to the inclusion of the Statistics and Expenditure of the Tuberculosis Dispensary. Eliminating the Dispensary patients and Expenditure the cost per attendance increased from 1s. 10d. to 2s. 2d., and that of each patient from 9s. 6d. to 9s. 11d."

(40) *Royal Waterloo Hospital*.—"The Management wish to state that, as last year, the shortage of doctors has necessitated a restriction of the attendance of Out Patients, with the result that the number for 1917 is 16,710 only, as against 47,000 in 1918."

(41) *St. George's Hospital*.—"The increase in the cost per occupied bed is attributable to the very great increase in the cost of all provisions, drugs, fuel, &c., and to the fact that it was found necessary to increase the wages of the scrubbers, and to increase the War Bonuses to the servants.

"It may be also pointed out that there is again a low daily average, which is accounted for by the number of beds set aside for military cases not being immediately filled when vacant.

"Attention is drawn to the average length of stay of each patient, which is 27.55 days, and which is a criterion of the serious nature of the majority of cases admitted.

"In some cases the patients get their personal washing done themselves, but in the large majority of cases Hospital garments are used and are washed at the Hospital's expense."

(42) *West End Hospital*.—"Washing. There is no laundry nor plant in the proper sense of the word; but outside laundry expenses went up so much that a small experiment was made in an unused kitchen. The work is really almost such as might be done in a private house.

"On an average some 400 articles weekly are dealt with—blankets and articles not included in the laundry's flat rate.

"The experiment shows that a small saving can be effected, and will therefore be continued."

(43) *Westminster Hospital*.—"The increase in the average total cost of each In-patient, viz., from £12. 8s. 10d. in 1916 to £15. 0s. 2d. in 1917, is almost entirely due to the increase in the average number of days each patient was resident and the consequent decrease in the number of patients treated to a conclusion, as explained in the paragraph relating to Patients at page 14 of the Annual Report.

"The increase in the average cost per Out-patient is principally due to the establishment of the evening Clinic for patients suffering from Venereal Diseases."

(44) *Woolwich and Plumstead Cottage Hospital*.—"The Governors wish to point out that in comparing the cost per patient in this Hospital with other Institutions, it should be noted that the expenditure on maintenance, of course, includes the cost of maintaining the necessary staff. If the accommodation were available, the same staff could treat a much larger number of patients, and the cost per patient would be correspondingly reduced."

KING EDWARD'S HOSPITAL FUND FOR LONDON

STATISTICAL REPORT

ON THE

ORDINARY EXPENDITURE

OF

ONE HUNDRED AND NINE LONDON HOSPITALS

FOR THE YEAR

1918

SEPTEMBER, 1919

LONDON

PRINTED AND PUBLISHED FOR KING EDWARD'S HOSPITAL FUND FOR LONDON
BY SPOTTISWOODE, BALLANTYNE & CO. LTD., 1 NEW-STREET SQUARE, E.C.

COPYRIGHT

To HIS ROYAL HIGHNESS THE PRINCE OF WALES, *President of King Edward's Hospital Fund for London.*

SIR,

We have the honour humbly to submit the Sixteenth Annual Statistical Report, prepared by Mr. Maynard from the published accounts of one hundred and nine London Hospitals and from returns made to the Fund.

These Hospitals are :—

- 11 General, with Medical Schools and with an average of over 100 beds in daily occupation.
- 8 General, without Medical Schools and with an average of over 100 beds in daily occupation.
- 13 Smaller General Hospitals.
- 2 Consumption Hospitals.
- 5 Hospitals for Women.
- 6 Hospitals for Children.
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 14 Cottage Hospitals.
- 8 Lying-in Hospitals.
- 34 Unclassified Hospitals.

109

These Hospitals*, taken together with St. Bartholomew's Hospital and the Cancer Hospital, provided a total of 11,566 beds in average daily occupation in 1918. The total number of In-patients admitted during that year was 145,212, while 1,203,573 patients attended at the Out-patient Departments.

Out of the total of 145,212 In-patients, 27,044 were Naval and Military patients treated by understanding with the Authorities; these patients representing an average for the whole year of 3,685 occupied beds, or nearly 32 per cent. of the total average occupied beds.

The average number of occupied beds in 1913 was 9,766; in 1918 the number was 11,566, a decrease as compared with 1917 of 182.

The number of these beds occupied by Naval and Military patients in 1918 was 3,685, an increase, over 1917, of 29 beds.

The result of the demand for beds on account of the war has, therefore, been that, while there has been an increase of 1,800 in the beds occupied, the number of beds occupied by civilian patients has been reduced by 1,885.

* See note † on page 7.

1918
1919
1920

The total ordinary expenditure during the year at these Hospitals (with St. Bartholomew's and the Cancer Hospitals), including Maintenance, Administration, Rent, Rates, and Taxes, but excluding capital expenditure, interest on borrowed money, and contributions to the maintenance of Convalescent Homes and Country branches, amounted to £1,946,155. The receipts from the Authorities in aid of the expenditure on Naval and Military patients amounted to £334,747, or over 17 per cent. of the total ordinary expenditure; the balance of £1,611,408 had to be met out of the normal sources of Hospital revenue.

As the total ordinary expenditure in 1913 was £1,142,938, the London Voluntary Hospitals thus had in 1918 to provide out of normal sources, as compared with the year before the war, an additional working expenditure of £468,470, or an increase of 40·98 per cent. The corresponding increase in 1915 was only about 4 per cent.; in 1916, 13 per cent.; and in 1917, 27 per cent. Not only has Hospital expenditure therefore risen considerably during the war, but the rate of increase shows no sign of slackening. Many of the beds formerly occupied by Naval and Military patients have been vacated since the end of 1918, and are now available for civilian patients. Except where some of these beds are being used for disabled men by arrangement with the Ministry of Pensions, the Hospitals have to provide the whole cost of maintenance, unaided by capitation grants from the Authorities. This will greatly increase the strain on the Hospital finances already caused by the general rise in prices, and will render it more than ever important that King Edward's Hospital Fund and the Hospital Sunday and Hospital Saturday Funds should be enabled to increase their grants.

For reasons explained in the Prefatory Note, comparisons of cost per bed between the current year and the previous year have again been omitted. The average cost at each Hospital, and the average cost of each group of Hospitals, continue, however, to be prepared for the assistance of Hospital Managers in controlling expenditure—the importance of which branch of administration is increased rather than diminished by the unavoidable increase in the total outlay.

We have the honour to be, Sir,

Your obedient humble servants,

SOMERLEYTON,

FREDERICK M. FRY,

JOHN G. GRIFFITHS,

Honorary Secretaries.

September 22nd, 1919.

NOTES ADDED BY THE FUND		50
NOTES SUPPLIED BY THE HOSPITALS		53

PREFATORY NOTE.

THE Statistical Report deals this year with the expenditure in 1918 of 109 Hospitals. These include nearly all the Hospitals which apply for grants from the Fund.*

Modification of the Report.

The Report this year again appears in the reduced form adopted partly for the sake of economy in cost, in postage, and in paper, and partly because much of the material which is useful in ordinary times is useless under war conditions. The cost of working at Hospitals in 1918 was still affected by the shortage of workers both skilled and unskilled, and by changes in the number of occupied beds due to the provision of beds for wounded soldiers, as well as by the continually increasing rises in prices.

Total Work and Expenditure in 1918; with Statistics of Naval and Military Patients.

Comparisons of cost per bed between 1918 and previous years have again been omitted, but the following comparisons of total work and total expenditure for 1913, 1917, and 1918 may be interesting.†

	1913	1917	1918
1. Total beds available	11,472	13,916	13,963
2. Average beds occupied	9,766	11,748	11,566
3. Total new in-patients	143,942	147,762	145,212
4. Total new out-patients	1,409,454	1,159,406	1,203,573
5. Total out-patient attendances	4,978,200	4,511,248	4,661,819
6. Naval or Military in-patients included above:—			
(a) Number treated	—	28,013	27,044
(b) Total patient days	—	1,334,455	1,345,209
(c) Equivalent average occupied beds for the whole year	—	3,656	3,685
7. Civilian in-patients included above:—			
(a) Number treated	143,942	119,749	118,168
(b) Average occupied beds	9,766	8,092	7,881
8. Total ordinary expenditure‡	£1,142,938	£1,724,228	£1,946,155
9. Payments by authorities in aid of expenditure on naval or military patients	—	£268,960	£334,747
10. Ordinary expenditure falling upon the normal sources of hospital income †	£1,142,938	£1,455,268	£1,611,408
11. Increase of ordinary expenditure over 1913 falling upon the normal sources of hospital income, expressed as a percentage †	—	27.32	40.98

* See note 22 on page 52.

† In this table the figures of St. Bartholomew's Hospital and Cancer Hospital are included. Country branches and Convalescent Homes are not included. In some cases Naval and Military patients are treated in these branches as well as at the parent Hospital. The figures for Hendon Cottage Hospital and South London Hospital for Women have also been excluded from this table as they are not available for the whole period. The figures of Naval and Military patients refer to patients treated "by understanding with the authorities." Certain small adjustments have been made in the figures for 1913 and 1917 to bring them into line with the figures available for 1918. The figures for 1914, 1915, and 1916 will be found in the Statistical Reports for 1916 and 1917.

‡ Ordinary expenditure includes Maintenance, Administration, and Rent, Rates and Taxes, but not interest on loans, contributions in aid of Convalescent Homes or Country branches, or capital expenditure.

Although these changes are the combined result of a number of causes operating at more than one hundred different institutions, a general comparison will give some idea of the way in which the war has affected the work and expenditure of the London voluntary Hospitals taken as a whole.

The average number of occupied beds increased between 1913 and 1918 from 9,766 to 11,566. As 3,685 of these beds were accounted for in 1918 by the admission of Naval or Military patients, the average number of beds occupied by civilian patients fell from 9,766 to 7,881. To put the same change in another way, the treatment of 27,044 Naval or Military patients in 1918 was accompanied by a decrease of 25,774 in the number of civilian in-patients, leaving a net increase of 1,270 in the total number of persons admitted to the wards in the course of twelve months.

The total ordinary expenditure, which in 1913 was £1,142,938, had risen in 1918 to £1,946,155, an increase of £803,217. In so far as this increase was due to the treatment of Naval or Military patients, it was partially covered by contributions from the Authorities amounting to £334,747. The balance, amounting to £468,470, represents the additional ordinary expenditure* which fell on the funds of the voluntary Hospitals of London during 1918: an increase of 40.98 per cent. on the expenditure in 1913.

If the figures of 1918 are compared with those for 1917, it will be seen that a decrease of 182, or 1.5 per cent., in the average number of occupied beds, was accompanied by an increase of £221,927, or 12.87 per cent., in the total ordinary expenditure. After making allowance for the amounts received from the Naval and Military Authorities, the increase in expenditure falling on the funds of the Hospitals was £156,140, or a further 10.73 per cent., in the course of the year. As all the additional beds were occupied by Naval or Military patients, and were thus partly paid for by the Authorities, this additional expenditure of £156,140, or 10.73 per cent., represents almost entirely an increase in the cost of working between 1917 and 1918.

Objects and Methods of the Reports.

No changes have been made in the form of the tables, and the following general statement is reprinted from previous Reports:—

The object of the detailed tables in the body of the Report is to assist hospital managers, and others interested, in controlling expenditure, and thus reducing as far as possible that part of the increase in cost which is not represented by an increase in the quantity or quality of the work done. The method adopted is to compare the expenditure at each Hospital with the expenditure at other Hospitals, and with the average of those Hospitals with which it is most comparable. Increases which are common to all Hospitals can thus be distinguished from those which are peculiar to any particular institution.

It is not suggested, however, that the lowest expenditure is intended to be taken as a model. All the comparisons are with the average, and even so the

* See note † on page 7.

Report must not be assumed necessarily to imply any criticism of expenditure in excess of the average. It only gives the figures as matters deserving the careful investigation of those concerned.

For the purpose of making the comparisons as fair as possible to the various Hospitals and as useful as possible as an aid to the control of expenditure, the following special principles are observed in the preparation of the Reports:

(a) The comparisons are limited to the items of expenditure which are the more capable of control. Certain items are thus excluded, sometimes because they are liable to wide and unavoidable variations as between one year and another or between one Hospital and another, sometimes because they cannot readily be modified by the Hospital Committees. These include the following, viz.: Repairs and other Establishment Charges, Official Salaries and Pensions, Finance, and Rent, Rates and Taxes.* It will therefore be borne in mind that, wherever in this Report a total or an average cost per bed or per out-patient attendance is stated, the figure is exclusive of the above-mentioned charges, and that variations in the figures cannot be explained by reference to variations in these items.

(b) The Hospitals are, as far as practicable, arranged in groups, so that the comparisons may be between Hospitals whose work is more or less closely comparable, and the group system is followed in all calculations of averages. This is not intended to prevent comparisons between Hospitals in different groups, a process for which, in fact, special facilities are provided in the preliminary alphabetical tables on pages 24 to 29. In the case of Hospitals which cannot be arranged in groups, the comparisons are confined to the preliminary tables and no group averages are calculated.

(c) The comparisons are made not only for the total expenditure on the various controllable items put together, but also for each of the main sub-heads of expenditure separately, viz.: Provisions, Surgery and Dispensary, Domestic, Salaries and Wages (maintenance), and Management other than Official Salaries and Pensions. This sub-division is intended to facilitate the discovery of the source of any excess which seems to require justification. It must be borne in mind, however, that at Hospitals where direct labour is employed to carry out work (such as, for example, the manufacture of drugs), which at other Hospitals is paid for in the purchase price, there will be a proportionately larger expenditure on Salaries and Wages and a correspondingly smaller expenditure on [say] Surgery and Dispensary or whatever the special heading may be.† Differences due to this cause cancel out in the comparisons of total expenditure.‡

Such statistical particulars as are available of the work done at the different Hospitals are set out in the first table relating to each group. This

* Tables of expenditure, including all these headings except Rent, Rates and Taxes, can be found in the published Annual Reports of the individual Hospitals.

† Only in the cases of laundry staff and staff employed on annual cleaning or establishment renewals and repairs is this source of difference removed by transfers made in the course of preparing this Report (see notes 14 and 15 on page 51).

‡ Except that in the case of articles purchased the cost includes an allowance for various expenses incurred by the seller (e.g. Rent, Rates, Establishment, Depreciation, etc.) which are not included in this Report in the case of work done on the premises.

table shows the average length of stay of in-patients, and the average number of attendances per out-patient. In the present issue of the Report, as in the last three, columns are added giving the statistics relating to Naval and Military patients included in the figures of in-patients.

The group tables are preceded by general alphabetical tables giving particulars of work done, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year) for all the institutions. This introductory section now forms in itself a very nearly complete statistical record of these figures for all the Hospitals of London which observe the Revised Uniform System of Accounts.*

In drawing conclusions from any of the tables it must be understood that they profess to give only the material for a comparison of outlay, and the question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. For this purpose many considerations must be taken into account which will readily occur to those concerned in Hospital management. Quite apart from special conditions arising out of the war, there may be differences in efficiency or in unavoidable circumstances, as well as in economy of administration. Most of these considerations cannot be expressed in statistics at all; others could not be included in a manageable form in a report dealing with more than one hundred Hospitals. This Report will have served its purpose if it stimulates inquiry into the causes of high cost and assists Hospital managers to see in what departments the source of the excess is to be found, and to reduce it wherever it cannot be justified.

H. R. MAYNARD,
Secretary.

September 22nd, 1919.

* See note 23 on page 53.

SECTION III.—LAUNDRY EXPENSES.

(Omitted this year.)

SECTION IV.—PRICES.

(Omitted this year.)

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

In some cases the Hospitals are unable to divide their beds under the headings indicated.

The *Royal London Ophthalmic* returns the number of beds as 188, 18 being empty in 1918.

(2) In the case of *St. Thomas's Hospital* the 34 paying beds are not included in the average number of beds in daily occupation, namely 851.5, and have been deducted in giving the total number of beds in the Hospital, namely 980. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them.

(8) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and Others is based on figures supplied by the Hospitals; but the definition of a casualty differs in different Hospitals.

(4) The *Blackheath and Charlton Hospital*, the *Eltham and Mottingham Cottage Hospital*, the *Finchley Cottage Hospital*, the *Hornsey Cottage Hospital*, the *Passmore Edwards Cottage Hospital*, Willesden, the *Passmore Edwards Cottage Hospital*, Wood Green, the *Wimbledon Hospital*, and the *Woolwich and Plumstead Cottage Hospital*, although having no general Out-Patients' Department, treat a small number of casualties, the cost of which is included in that of the In-Patients.

(5) The *Clapham Maternity Hospital* treats a small number of Out-patients at the In-patient Department at Clapham, and the cost of these Out-patients is included in the cost per bed.

(6) *Naval and Military Patients.*—The figures in the three columns at the end of the table on pages 18, 16 and 17 and in Table I. of Groups I. to IX. are taken from special returns supplied by the Hospitals. They show the total amount of work done in 1918, "by understanding with the authorities," for Naval and Military In-Patients, and, by comparison with the figures given in the earlier columns of these tables, the proportion which this work bears to the total work done during that year. Naval and Military Patients treated otherwise than "by understanding with the authorities" are not included in these special columns.

As a general rule, the expenditure on Naval and Military patients is included in the figures of expenditure and consequently in the cost per bed and in the group averages. The exceptions are *King's College Hospital*, the *Metropolitan Hospital* and *St. Thomas's Hospital*, where the relation of military beds to civil beds in 1918 was such as to render the figures not comparable with those of other Hospitals; and the *Royal Hospital for Diseases of the Chest*, which ceased to take civil patients after July 1, 1915.

It will also be noticed that the larger proportion of patients treated at the *Royal National Orthopaedic Hospital* were Military patients.

(7) *St. John's Hospital, Lewisham.*—The cost of the Bacteriological and X-Ray work done for the Lewisham Borough Council, the Lewisham Board of Guardians, and the Chatteris Urban District Council, is not included in the figures in this Report.

(8) *Consumption Hospitals.*—The figures relating to Country Branches are not included in this Report.

(9) *Lying-in Hospitals.*—The figures relating to the Training Schools of the various hospitals in this group are not included in this Report.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of St. Vincent de Paul. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages in Group III., Table II., with the result that the averages for Salaries and Wages and for total cost are not reduced by the low figure for Salaries and Wages at this Hospital.

(11) *Action Hospital.*—The cost of the District Nursing Institution, Invalid Kitchen, and Dispensary, is not included in the figures in this Report.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 15 and 20 below).

(13) *Provisions.*—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. At some Hospitals, however, the nurses return to the wards after taking private cases; during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic.*—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on Hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," "Establishment Charges," and "Rent, Rates and Taxes," as shown in the washing returns published by these Hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. The Tables showing the cost of washing usually appearing as Section III. of this Report are not published this year.

(15) *Establishment and Salaries and Wages.*—Comparisons of cost under the separate heads, and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences under the several heads cancel one another in the final columns giving total cost for all the headings combined.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses.*—For the purposes of this Report the total Management Expenses are divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain Hospitals patients are required, unless too poor, to provide certain articles of food. These are as follows: *City of London Maternity*—sugar and eggs; *London Homœopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *London Temperance*, tea and sugar; *Middlesex*, tea and sugar; *Stoke Newington*, sugar; *University College*, tea and sugar.

(18) The following Hospitals treated patients in return for grants under the scheme of the Local Government Board for the diagnosis and treatment of venereal diseases, viz.:—*Charing Cross*, *Seamen's (Dreadnought)*, *Elizabeth Garrett Anderson*, *Great Northern Central*, *Guy's*, *Hospital for Sick Children*, *King's College*, *London*, *London Lock*, *Middlesex*, *Miller*, *Royal Free*, *St. George's*, *St. Mary's*, *St. Thomas's*, *University College*, *West London*, *Westminster*.

As the cost of such patients is usually greater than the average, this tends to raise the cost per bed and per attendance at these Hospitals.

(19) *Average Number of Beds in Daily Occupation*.—These figures are obtained by dividing the total number of Patient-Days as supplied by the Hospitals by the number of days in the year 1918, viz., 865.

(20) (a) *Average Number of Days each Patient was Resident*.—These figures are given by the Hospitals in their Statistical Tables.

(b) The Group Averages are obtained by dividing the total number of Patient-Days by the total number of patients treated to a conclusion, i.e., the number of In-Patients in the Hospitals at the beginning of the year plus those admitted during the year minus those in the Hospitals at the end of the year.

(21) The totals and general averages corresponding to the columns marked (b) in Section I., Table I., for the different groups of Hospitals, are as follows:—

1 Group of Hospitals	2 IN-PATIENTS				6 OUT-PATIENTS			9 Naval or Military Patients* (Included in In-Patients)		
	3 Beds		4 Total number of New In-Patients	5 Average number of days each Patient was resident	7 Total new Out-Patients	8 Total Attendances	Average number of Attendances per Out-Patient	10 Number treated in 1918	11 Total Patient days represented by these Patients	Number of Average Occupied Beds for the year represented by these Patients

* These figures relate to Naval or Military patients admitted by understanding with the Authorities. (See note 6 on page 50.)

† The Hospitals named in note 6 on page 50 are not included in the averages in columns 5 and 8, but are included in all the other columns. St. Bartholomew's Hospital and the Cancer Hospital are not included in any part of the table.

(22) The issue of these Reports was begun by Mr. J. Danvers Power, M.V.O., with the figures of 16 Hospitals for 1908. But the earlier ones contained confidential matter, and the first Report published was that for 1908.

(23) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a book issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 23 Fournival Street, Holborn, E.C. (3rd edition, August 1914, price 1s. 9d. post free). The System was drawn up by the three Funds after reports on the subject by Mr. John G. Griffiths, C.V.O., F.C.A., and a Committee of Hospital Secretaries.

NOTES RELATING TO THE ITEMS DEALT WITH IN THIS REPORT PRINTED IN COURTESY TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE KINDLY SUPPLIED.

(24) *Belgrave Hospital for Children*.—"The Babies' Ward containing eight Cots had to be closed on the 21st October owing to the lack of Nurses, and the average number of Patients resident daily throughout the year was reduced accordingly."

(25) *Bolingbroke Hospital*.—"The Board regret that the costs have further increased but it is owing to circumstances over which they have little control, as prices of articles and increases of salaries and wages are still on the rise."

(26) *Chelsea Hospital for Women*.—"The cost per bed in 1918 was high owing—

- "1. To one-fourth of the wards having to be used to accommodate part of the nursing staff.
- "2. To the higher cost of living of the wounded officer patients the large majority of whom were 'walking cases.'
- "3. To the high prices prevailing."

(27) *Hampstead General Hospital*.—"Attention is particularly drawn to the fact that the cost of maintaining the ambulance is included in the general account of income and expenditure. The maintenance of ambulance involves an additional night porter, two chauffeurs, and the part services of a day porter, estimated at one-third of time, bringing the total cost of the maintenance of ambulance, including running repairs, petrol and insurance to £599. 8s., thus increasing the cost per bed by £5. 1s."

(28) *Hospital for Women*.—"During the year 1918 the entire Hospital was closed for one month (August) for annual cleaning purposes and to facilitate the holiday arrangements of the staff—honorary medical, nursing, and domestic. The numbers of patients treated during the year represent eleven months work only, and the cost per bed and the cost per patient are therefore proportionately higher than would have been the case if the Hospital had been in full working order for the twelve months complete."

(29) *London Homœopathic Hospital*.—"Special attention is given to the training of Nurses. There are no Paying Probationers, therefore no 'Fee' to reduce nursing cost.

"There has to be a larger number of Nurses on the Staff than in Hospitals with Medical Schools, the Nurses doing the work (dressings, &c.) done by Students in Medical Schools.

"In view of the very considerable increase in cost of provisions, the increased cost per bed must inevitably follow."

(30) *Metropolitan Hospital*.—"Special attention is given to Jewish Patients."

"Special attention is given to the training of Nurses."

(31) *National Hospital for Diseases of the Heart*.—"The prices of fish, milk, coal, and gas were all much higher, and the laundry charges were again increased. Salaries of dispenser, nurses, and domestics had to be raised."

(82) *Poplar Hospital*.—"Please note in regard to Out-patients that we do not make any patients coming to the Casualty Department 'Medical Out-patients.'

"Our Out-patient Department, as distinguished from the Casualty Department, treats 'Surgical Out-Patients' only."

(33) *Queen's Hospital for Children*.—"The difficulties of keeping down the expenditure mentioned last year were again experienced in an accentuated degree in 1918.

"The Nursing Staff was further reduced owing to the increased difficulty in obtaining suitable candidates. A reduction in the number of beds in use necessarily followed.

"Early in the year 24 beds were withdrawn, causing an average reduction of about 20 for the year.

"The rise in the cost of labour caused a considerable increase in expenditure under the heading of Salaries and Wages (Mechanics and Porters)."

(34) *Royal Chest Hospital*.—"The total expenditure of the Hospital's Tuberculosis Dispensary Department for 1918 amounted to £2,555. 11s., and is included in the General Account and Statistical Tables.

"An increase of £619 under 'Salaries, Wages, &c.' as compared with the previous year, is due to increases in the Salaries of, and War Bonuses given to, nearly the whole of the working staff of the Hospital."

(35) *St. Andrew's Hospital*.—"Unusually heavy expenditure was incurred under the heading Domestic.—2. Renewal of Linen, &c., owing to wear and tear caused by soldiers."

(36) *St. George's Hospital*.—"The increase in the cost per occupied bed is attributable to the very great increase in the cost of all provisions, drugs, fuel, &c., and to the fact that it was found necessary to increase the wages of the nursing staff, and to further increase the War Bonuses to the servants.

"It may be also pointed out that there is again a low daily average, which is accounted for by the number of beds set aside for military cases not being immediately filled when vacant, to the necessity for closing four wards for repainting and redecoration, and on account of the outbreak of an epidemic of influenza in the late autumn, which also necessitated the closing of certain wards.

"Attention is drawn to the average length of stay of each patient, which is 27.61 days, and which is a criterion of the serious nature of the majority of cases admitted.

"In some cases the patients get their personal washing done themselves, but in the large majority of cases, Hospital garments are used and are washed at the Hospital's expense."

(37) *St. John's Hospital (Lewisham)*.—"The increase in cost of Out-patients attendances is largely due to the expensive drugs used in the Venereal Diseases Clinic and to the fact that stock medicines are now provided for very poor patients.

"Increase in cost per bed of In-patients due to higher prices for hospital necessities of all kinds including food."

(38) *South London Hospital for Women*.—"The Board of Management beg to submit that the cost per bed is increased by reason of the facts:—

"(a) That the Administration portion of the Hospital building is designed to meet the requirements of a Hospital having an accommodation twice that of its present size, it being intended to enlarge to this extent when conditions permit.

"(b) That it has been necessary to engage private nurses to fill temporary vacancies on the nursing staff.

"The Board further desire to draw attention to the fact that, in the interests of the patients, the In-patient Department and the Out-patient Department are situated in different localities, which tends to add to the general expenditure."

(39) *Woolwich and Plumstead Cottage Hospital*.—"The Governors wish to point out that, in comparing the cost per patient in this Hospital with other Institutions, it should be noted that the expenditure on maintenance, of course, includes the cost of maintaining the necessary staff. If the accommodation were available, the same staff could treat a much larger number of patients, and the cost per patient would be correspondingly reduced."

TO HIS ROYAL HIGHNESS THE PRINCE OF WALES, *President of King Edward's Hospital Fund for London.*

SIR,

We have the honour humbly to submit the Seventeenth Annual Statistical Report, prepared by Mr. Maynard from the published accounts of one hundred and nine London Hospitals and from returns made to the Fund.

These Hospitals are :—

- 11 General, with Medical Schools and with an average of over 100 beds in daily occupation.
- 8 General, without Medical Schools and with an average of over 100 beds in daily occupation.
- 13 Smaller General Hospitals.
- 2 Consumption Hospitals.
- 5 Hospitals for Women.
- 6 Hospitals for Children.
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 14 Cottage Hospitals.
- 8 Lying-in Hospitals.
- 34 Unclassified Hospitals.

109

These Hospitals*, taken together with St. Bartholomew's Hospital and the Cancer Hospital, provided a total of 9,988 beds in average daily occupation in 1919. The total number of In-patients admitted during that year was 146,585, while 1,318,915 patients attended at the Out-patients Departments.

The principal features affecting the statistics of the London Hospitals during the year were the continued rise in prices and in salaries and wages and the cessation of the treatment of naval and military patients. This latter involved the closing of some beds and the restoration of a much larger number to their original purpose of treating the sick poor. This process of restoration of the hospitals was for the most part completed by the end of March 1919; it was, in most cases, gradual, and resulted, when comparing 1919 with 1918, in a considerable reduction in the number of beds occupied, and there was, in consequence, an extended increase in the cost per bed not only to the large additional cost of supplies and service, but the fact that the general charges were in many cases apportioned over a smaller number of patients.

The number of beds occupied by Naval or Military patients decreased from 3,685 in 1918 to 708 in 1919, while the number occupied by civilians increased from 7,881 to 9,280, or about 500 short of the number available in 1913.

* See note † on page 7.

Many of these beds are now used for the treatment of ex-Service men, either by arrangement with the Ministry of Pensions or as ordinary patients.

The total number of naval and military patients treated by the London Voluntary Hospitals during the whole period from the outbreak of war to the end of the year 1919 amounted to 122,840.

The total ordinary expenditure during the year at these Hospitals (with St. Bartholomew's and the Cancer Hospitals), including Maintenance, Administration, Rent, Rates, and Taxes, but excluding capital expenditure, interest on borrowed money, and contributions to the maintenance of Convalescent Homes and Country branches, amounted to £2,137,755. The receipts from the Authorities in aid of the expenditure on Naval and Military patients amounted to £69,716, or 3.26 per cent. of the total ordinary expenditure; the balance of £2,068,039 had to be met out of the normal sources of Hospital revenue.

As the total ordinary expenditure in 1913 was £1,142,938, the London Voluntary Hospitals thus had in 1919 to provide out of normal sources, as compared with the year before the war, an additional working expenditure of £925,101, or an increase of 80.97 per cent. The corresponding increase in 1915 was only about 4 per cent.; in 1916, 13 per cent.; in 1917, 27 per cent.; and in 1918, 40.98 per cent.

The great and unavoidable increase in expenditure has unfortunately been accompanied by a serious falling off in the subscribing power of the regular supporters of the voluntary hospitals, and, while the hospitals are making special efforts to develop new sources of income, their financial position has become alarming. The King's Fund has recently made an emergency distribution of £250,000 to help the hospitals to meet their more pressing needs, and thus to give the managers the time and opportunity, together with some encouragement, to improve their finances by their own efforts: it is to be hoped that their efforts will be rewarded by the continued and increased support of their old friends and by a realisation, on the part of those who are able to help, of the great value of the services rendered by the Voluntary Hospitals, and of their own duty to assist in the present great emergency.

For reasons explained in the Prefatory Note, comparisons of cost per bed between the current year and the previous year have again been omitted. The average cost at each Hospital, and the average cost of each group of Hospitals, continue, however, to be prepared for the assistance of Hospital Managers in controlling expenditure—the importance of which branch of administration is increased rather than diminished by the unavoidable increase in the total outlay.

We have the honour to be, Sir,

Your obedient humble servants,

SOMERLEYTON,

FREDERICK M. FRY,

JOHN G. GRIFFITHS,

Honorary Secretaries.

September 3rd, 1920.

PREFATORY NOTE.

THE Statistical Report deals this year with the expenditure in 1919 of 109 Hospitals. These include nearly all the Hospitals which apply for grants from the Fund.*

Modification of the Report.

The Report this year again appears in the reduced form adopted partly for the sake of economy in cost, in postage, and in paper, and partly because much of the material which is useful in ordinary times is useless under the temporary conditions resulting from the war. The cost of working at Hospitals in 1919 was still affected by the shortage of workers both skilled and unskilled, as well as by the continually increasing rise in prices; and several Hospitals show large increases in cost per bed, partly caused by changes in the number of occupied beds due to the closing of some beds used for Naval and Military patients and the gradual return of others to civilian use.‡

Total Work and Expenditure in 1919; with Statistics of Naval and Military Patients.

Comparisons of cost per bed between 1919 and previous years have again been omitted, but the following comparisons of total work and total expenditure for 1913, 1918, and 1919 may be interesting.† At most Hospitals the treatment of Naval and Military patients (as distinct from war-pensioners and other ex-Service men, who are counted as civilians) ceased on or about March 31, 1919, though in a few cases it continued to some extent throughout the year.

	1913	1918	1919
1. Total beds available	11,472	13,963	12,589
2. Average beds occupied	9,766	11,566	9,988
3. Total new in-patients	143,942	145,212	146,585
4. Total new out-patients	1,409,454	1,203,573	1,318,915
5. Total out-patient attendances	4,978,200	4,661,819	5,484,271
6. Naval or Military in-patients included above:—

(b) Total patient-days	—	1,345,209	258,638
(c) Equivalent average occupied beds for the whole year	—	3,685	708
7. Civilian in-patients included above:—			
(a) Number treated	143,942	118,168	140,607
(b) Average occupied beds	9,766	7,881	9,280
8. Total ordinary expenditure‡	£1,142,938	£1,946,155	£2,137,755
9. Payments by authorities in aid of expenditure on naval or military patients ..	—	£334,747	£69,716
10. Ordinary expenditure falling upon the normal sources of hospital income ‡ ..	£1,142,938	£1,611,408	£2,068,039
11. Increase of ordinary expenditure over 1913 falling upon the normal sources of hospital income, expressed as a percentage ‡	—	40.98	80.97

* See note 22 on page 52.

‡ For examples see the notes on pages 53 to 56.

† In this table the figures of St. Bartholomew's Hospital and Cancer Hospital are included. Country branches and Convalescent Homes are not included. In some cases Naval and Military patients are treated in these branches as well as at the parent Hospital. The figures for Hendon Cottage Hospital, the South London Hospital for Women, and Winifred House have also been excluded from this table as they are not available for the whole period. The figures of Naval and Military patients refer to patients treated "by understanding with the authorities." Certain small adjustments have been made in the figures for 1913 to bring them into line with the figures available for 1918. The figures for 1914, 1915, 1916, and 1917 will be found in the Statistical Reports for 1916, 1917 and 1918.

‡ Ordinary expenditure includes Maintenance, Administration, and Rent, Rates and Taxes, but not interest on loans, contributions in aid of Convalescent Homes or Country branches, or capital expenditure.

Although these changes are the combined result of a number of causes operating at more than one hundred different institutions, a general comparison will give some idea of the way in which the war has affected the work and expenditure of the London Voluntary Hospitals taken as a whole.

The average number of occupied beds increased during the war from 9,766, all for civilians, in 1913, to a maximum in 1917 of 11,748, of which nearly 3,700 were occupied by Naval or Military patients and only about 8,000 by civilians. In 1919 the total fell again to 9,988, of which 9,280 were occupied by civilians (including ex-Service men) and only 708 by Naval or Military patients. The total number of Naval and Military patients treated by the London Voluntary Hospitals during the whole period since the outbreak of war amounted to 122,840, the total number of patient-days being 4,962,232.

The total expenditure of the Hospitals continued to increase during 1919 in spite of the reduction in the total number of beds occupied, while the amount received from the Naval and Military Authorities decreased from £334,747 to £69,716. The result was that the ordinary expenditure falling on the normal sources of hospital income (including grants from public authorities in respect of the treatment of pensioners and other civilian patients) increased from £1,611,408 in 1918 to £2,068,039 in 1919, an increase of 28.34 per cent. The increase since 1913, when the corresponding figure was £1,142,938, amounts to nearly 81 per cent.

Objects and Methods of the Reports.

No changes have been made in the form of the tables, and the following general statement is reprinted from previous Reports:—

The object of the detailed tables in the body of the Report is to assist hospital managers, and others interested, in controlling expenditure, and thus reducing as far as possible that part of the increase in cost which is not represented by an increase in the quantity or quality of the work done. The method adopted is to compare the expenditure at each Hospital with the expenditure at other Hospitals, and with the average of those Hospitals with which it is most comparable. Increases which are common to all Hospitals can thus be distinguished from those which are peculiar to any particular institution.

It is not suggested, however, that the lowest expenditure is intended to be taken as a model. All the comparisons are with the average; and even so the Report must not be assumed necessarily to imply any criticism of expenditure in excess of the average. It only gives the figures as matters deserving the careful investigation of those concerned.

For the purpose of making the comparisons as fair as possible to the various Hospitals and as useful as possible as an aid to the control of

* See note † on page 7.

Expenditure, the following special principles are observed in the preparation of the Reports:

(a) The comparisons are limited to the items of expenditure which are the more capable of control. Certain items are thus excluded, sometimes because they are liable to wide and unavoidable variations as between one year and another or between one Hospital and another, sometimes because they cannot readily be modified by the Hospital Committees. These include the following, viz.: Repairs and other Establishment Charges, Official Salaries and Pensions, Finance, and Rent, Rates and Taxes.* It will therefore be borne in mind that, wherever in this Report a total or an average cost per bed or per out-patient attendance is stated, the figure is exclusive of the above-mentioned charges, and that variations in the figures cannot be explained by reference to variations in these items.

(b) The Hospitals are, as far as practicable, arranged in groups, so that the comparisons may be between Hospitals whose work is more or less closely comparable, and the group system is followed in all calculations of averages. This is not intended to prevent comparisons between Hospitals in different groups, a process for which, in fact, special facilities are provided in the preliminary alphabetical tables on pages 24 to 29. In the case of Hospitals which cannot be arranged in groups, the comparisons are confined to the preliminary tables and no group averages are calculated.

(c) The comparisons are made not only for the total expenditure on the various controllable items put together, but also for each of the main sub-heads of expenditure separately, viz.: Provisions, Surgery and Dispensary, Domestic, Salaries and Wages (maintenance), and Management other than Official Salaries and Pensions. This sub-division is intended to facilitate the discovery of the source of any excess which seems to require justification. It must be borne in mind, however, that at Hospitals where direct labour is employed to carry out work (such as, for example, the manufacture of drugs), which at other Hospitals is paid for in the purchase price, there will be a proportionately larger expenditure on Salaries and Wages and a correspondingly smaller expenditure on [say] Surgery and Dispensary or whatever the special heading may be.† Differences due to this cause cancel out in the comparisons of total expenditure.‡

Such statistical particulars as are available of the work done at the different Hospitals are set out in the first table relating to each group. This table shows the average length of stay of in-patients, and the average number of attendances per out-patient. In the present issue of the Report, as in the last three, columns are added giving the statistics relating to Naval and Military patients included in the figures of in-patients.

* Tables of expenditure, including all these headings except Rent, Rates and Taxes, can be found in the published Annual Reports of the individual Hospitals.

† Only in the cases of laundry staff and staff employed on annual cleaning or establishment renewals and repairs is this source of difference removed by transfers made in the course of preparing this Report (see notes 14 and 15 on page 51).

‡ Except that in the case of articles purchased the cost includes an allowance for various expenses incurred by the seller (e.g. Rent, Rates, Establishment, Depreciation, etc.) which are not included in this Report in the case of work done on the premises.

The group tables are preceded by general alphabetical tables giving particulars of work done, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year) for all the institutions. This introductory section now forms in itself a very nearly complete statistical record of these figures for all the Hospitals of London which observe the Revised Uniform System of Accounts.*

In drawing conclusions from any of the tables it must be understood that they profess to give only the material for a comparison of outlay, and the question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. For this purpose many considerations must be taken into account which will readily occur to those concerned in Hospital management. Quite apart from special conditions arising out of the war, there may be differences in efficiency or in unavoidable circumstances, as well as in economy of administration. Most of these considerations cannot be expressed in statistics at all; others could not be included in a manageable form in a report dealing with more than one hundred Hospitals. This Report will have served its purpose if it stimulates inquiry into the causes of high cost and assists Hospital managers to see in what departments the source of the excess is to be found, and to reduce it wherever it cannot be justified.

H. R. MAYNARD,
Secretary.

September 3rd, 1920.

TABLES.

SECTION III.—LAUNDRY EXPENSES.

(Omitted this year.)

SECTION IV.—PRICES.

(Omitted this year.)

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

In some cases the Hospitals are unable to divide their beds under the headings indicated.

The *Royal London Ophthalmic* returns the number of beds as 188, 18 being empty in 1919.

(2) In the case of *St. Thomas's Hospital* the 84 paying beds are not included in the average number of beds in daily occupation, namely 521.44, and have been deducted in giving the total number of beds in the Hospital, namely 626. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them.

(3) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and Others is based on figures supplied by the Hospitals; but the definition of a casualty differs in different Hospitals.

(4) The *Blackheath and Charlton Hospital*, the *Eltham and Mottingham Cottage Hospital*, the *Finchley Cottage Hospital*, the *Hornsey Cottage Hospital*, the *Passmore Edwards Cottage Hospital*, Willesden, the *Passmore Edwards Cottage Hospital*, Wood Green, the *Wimbledon Hospital*, and the *Woolwich and Plumstead Cottage Hospital*, although having no general Out-Patients' Department, treat a small number of casualties, the cost of which is included in that of the In-Patients.

(5) The *Clapham Maternity Hospital* treats a small number of Out-patients at the In-patient Department at Clapham, and the cost of these Out-patients is included in the cost per bed.

(6) *Naval and Military Patients*.—The figures in the three columns at the end of the table on pages 18, 15 and 17 and in Table I. of Groups I. to IX. are taken from special returns supplied by the Hospitals. They show the total amount of work done in 1919, "by understanding with the authorities," for Naval and Military In-Patients, and, by comparison with the figures given in the earlier columns of these tables, the proportion which this work bears to the total work done during that year. Naval and Military Patients treated otherwise than "by understanding with the authorities" are not included in these special columns.

The *King's College Hospital*, the *Metropolitan Hospital*, the *St. Thomas's Hospital*, and the *Royal Hospital for Diseases of the Chest*, where the relation of military beds to civil beds during the War was such as to render the figures not comparable with those of other Hospitals, have again been omitted from the group averages in consequence of the changes necessitated by the closing of Military Wards and their preparation for civilian use.

(7) *St. John's Hospital, Lewisham*.—The cost of the Bacteriological and X-Ray work done for the Lewisham Borough Council, the Lewisham Board of Guardians, and the Chatterbox Urban District Council, is not included in the figures in this Report.

(8) *Consumption Hospitals*.—The figures relating to Country Branches are not included in this Report.

(9) *Lying-in Hospitals*.—The figures relating to the Training Schools of the various hospitals in this group are not included in this Report.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of St. Vincent de Paul. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages in Group III., Table II., with the result that the averages for Salaries and Wages and for total cost are not reduced by the low figure for Salaries and Wages at this Hospital.

(11) *The Memorial Hospital, Mildmay Park*, was closed for cleaning and installation of electric light from July 31—November 19, 1919.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 15 and 20 below).

(13) *Provisions*.—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. At some Hospitals, however, the nurses return to the wards after taking private cases; during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic*.—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on Hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," "Establishment Charges," and "Rent, Rates and Taxes," as shown in the washing returns published by these Hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. The Tables showing the cost of washing usually appearing as Section III. of this Report are not published this year.

(15) *Establishment and Salaries and Wages*.—Comparisons of cost under the separate heads, and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences under the several heads cancel one another in the final columns giving total cost for all the headings combined.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses*.—For the purposes of this Report the total Management Expenses are divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain Hospitals patients are required, unless too poor, to provide certain articles of food. These are as follows: *City of London Maternity*—butter, sugar and eggs; *London Homoeopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *London Temperance*—tea and sugar; *Middlesex*—tea and sugar; *Stoke Newington*—sugar; *University College*—tea and sugar; *Wimbledon*—sugar.

(18) The following Hospitals treated patients in return for grants under the scheme of the Local Government Board for the diagnosis and treatment of venereal diseases, viz.:—*Charing Cross*, *Elizabeth Garrett Anderson*, *Great Northern Central*, *Guy's*, *Hospital for Sick Children*, *King's College*, *London*, *London Lock*, *Metropolitan*, *Middlesex*, *Miller*, *Royal Free*, *St. George's*, *St. John's (skin)*, *St. John's*, *Lewisham*, *St. Mary's*, *St. Thomas's*, *Seamen's (Dreadnought)*, *South London Hospital for Women*, *University College*, *West London*, *Westminster*.

As the cost of such patients is usually greater than the average, this tends to raise the cost per bed and per attendance at these Hospitals.

(19) *Average Number of Beds in Daily Occupation*.—These figures are obtained by dividing the total number of Patient-Days as supplied by the Hospitals by the number of days in the year 1919, viz., 365. See also the second paragraph on page 7.

(20) (a) *Average Number of Days each Patient was Resident*.—These figures are given by the Hospitals in their Statistical Tables.

(b) The Group Averages are obtained by dividing the total number of Patient-Days by the total number of patients treated to a conclusion, i.e., the number of In-Patients in the Hospitals at the beginning of the year plus those admitted during the year minus those in the Hospitals at the end of the year.

(21) The totals and general averages corresponding to the columns marked (b) in Section I., Table I., for the different groups of Hospitals, are as follows:—

1 Group of Hospitals	2 3 4 5 IN-PATIENTS				6 7 8 OUT-PATIENTS			9 10 11 Naval or Military Patients* (Included in In-Patients)

* These figures relate to Naval or Military patients admitted by understanding with the Authorities. (See note 6 on page 50.)

† The Hospitals named in note 6 on page 50 are not included in the averages in columns 5 and 8, but are included in all the other columns. St. Bartholomew's Hospital and the Cancer Hospital are not included in any part of the above table.

(22) The issue of these Reports was begun by Mr. J. Danvers Power, M.V.O., with the figures of 16 Hospitals for 1908. But the earlier ones contained confidential matter, and the first Report published was that for 1908.

(23) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a book issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 23 Farnival Street, Holborn, E.C. (3rd edition, August 1914, price 3s. net, 3s. 4d. post free); also Memorandum F. 111. 1/18, containing Supplementary Regulations (August 1914 to January 1918), including those dealing with work done by arrangement with Public Authorities, price 9d. net, post free. The System was drawn up by the three Funds after reports on the subject by Mr. John G. Griffiths, C.V.O., F.C.A., and a Committee of Hospital Secretaries.

NOTES RELATING TO THE ITEMS DEALT WITH IN THIS REPORT PRINTED IN COURTESY
TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE KINDLY SUPPLIED.

(24) *Belgrave Hospital for Children*.—"The Babies' Ward (eight cots) was closed during the year for lack of nurses, and the whole Hospital was closed during the month of August; this greatly affected 'the average number of beds occupied daily.'

"The Babies' Ward has since been reopened (May 8, 1920)."

(25) *Bolingbroke Hospital*.—"The Board regret that the costs have further increased, but salaries, wages, etc., and other articles over which they have no control, are on the rise; but there is every reason to think that, for this year, the cost per bed will be less."

(26) *Charing Cross Hospital*.—"The very large increase which has taken place in the cost per bed is due partly to the continual rise in prices, but even more to the fluctuation in the number of beds available.

"The Military Wards were vacated in February, and had to be thoroughly cleaned and in some cases repainted, and the beds redistributed on a civilian basis to the medical and surgical staff. Some time therefore elapsed before they were all brought into use again. The effect of this is seen in the average number of patients resident daily, which fell from 250, as in the previous year, to 183. Its effect is also strongly in evidence in the cost per bed, because when a large number of beds are thrown temporarily out of use the total expenditure cannot be proportionately reduced, and therefore the cost of the remaining beds inevitably goes up.

"The increased cost of living has necessitated considerable additions being granted by the Council to the emoluments of the various sections of the staff."

(27) *Chelsea Hospital for Women*.—"The cost per bed was high in 1919, owing—

"1. To half the wards having to be used to house the nurses and servants.

"2. To the increasingly high prices prevailing."

(28) *Cheyne Hospital for Sick and Incurable Children*.—"The increase in 'cost per bed' has been inevitable, owing to the great rise in prices of all commodities, and also to the necessity of raising salaries and wages in order to keep up the nursing and domestic staff."

(29) *East London Hospital for Children*.—"We have been short of 24 cots owing to lack of nurses. This, combined with the higher prices of all commodities, has increased our cost per bed."

(30) *French Hospital and Dispensary*.—"Eighty-seven beds were available to the end of February and 74 after the departure of wounded soldiers."

(31) *Hampstead General and North-West London Hospital*.—"Included in the expenditure for the year is the sum of £678. 1s. 11d., the total cost of maintaining the ambulance. Of this sum, £489. 14s. 11d. is set out under Establishment (item 5), the remainder, which includes board and proportion of wages paid to porters, being distributed under respective sub-headings."

(32) *Hospital for Sick Children*.—"The North Block was reopened as an Infections Block on October 17, 1919, with 22 beds. The average number of patients resident daily from October 7, 1919, to December 31, 1919, was 4.406."

(83) *London Homœopathic Hospital*.—"The high cost per occupied bed is attributable, amongst other things, to the fact that an average number of 25 beds were closed throughout the year for the purpose of renovating the wards, thus reducing our daily occupied beds to 109. "There has to be a larger number of nurses on the staff than in Hospitals with Medical Schools, the nurses doing the work (dressings, &c.) done by students in Medical Schools."

(84) *London Hospital*.—"The Management call attention to various points affecting the cost in 1919. These may be summarised as follows:—

- "(a) Decreases since 1918 in the cost, under various headings, due to the closing of the officers' wards, and to the use during 1919 of stocks of linen and uniforms secured in 1918 and of coal accumulated against emergencies.
- "(b) Increases due to increased prices; to the relaxation of rationing for the medical and nursing staff; to the shortage of qualified medical men, necessitating increases in salaries previously nominal; to the payment of salaries to L.C.C. clinical assistants and assistants in the Venereal Diseases Department; to new scales of pay for dispensers and for nurses; to the return of officials from the war; to staff reorganisation; to increase in wages; and to the cost of renewing stocks of stationery and instruments and appliances.
- "(c) The cost of treating 607 sick nurses in the sick room in the special wards who are not counted in the statistics of patients.
- "(d) The cost of the 'follow through' departments for keeping in touch with old patients.
- "(e) The cost of a complete system of out-patient registration, and of records of patients sent by public authorities.
- "(f) The cost, £2,477, of Tredegar House, the preliminary training home for nurses."

(85) *Metropolitan Hospital*.—"The Hospital has a special In- and Out-patient Department for Jews; a Venereal Diseases Department; a Tuberculosis Dispensary serving the boroughs of Stoke Newington and Hackney; and a Pathological Department."

(86) *Middlesex Hospital*.—"All the statistics for the year 1919 are very materially affected by the closing of the Hospital during the months of July, August and September, for the purpose of carrying out extensive replacement of plant and general repairs.

"The numbers relating to in-patients were further reduced by the fact that the wards had to be gradually emptied during June, and that it was some time after the nominal reopening before they received their full complement.

"The effect of these abnormal conditions is shown by an increase of £3 19s. 1d. in the weekly cost per occupied bed over the corresponding cost for 1918."

(87) *Middlesex Hospital Cancer Charity*.—"During the year 1919 the Cancer Charity was closed for three months (July, August and September) for repairs and redecoration. During that period a certain number of the patients were treated at the Convalescent Home at Clacton-on-Sea, to which institution also those patients on the Waiting List who were able to bear the journey were admitted.

"The fall in the average number of beds occupied and the rise in the average weekly cost per occupied bed were due to these causes."

(88) *Nelson Hospital (for Wimbledon, Merton, and District)*.—"The increased cost throughout is due principally to rise in cost of commodities, etc., but also to some increases in salaries to staff, and the appointment of a sister in charge of electrical and massage department, in which considerable numbers of pensioners and ex-Service men are dealt with."

(89) *Queen's Hospital for Children*.—"Last year, in addition to the nursing difficulty experienced by most Hospitals, the necessity for carrying out the long-delayed repainting of the wards still further reduced the average of occupied beds besides increasing the expenditure, and as a consequence 22 beds were unused daily throughout the year, as compared with 20 beds in 1918.

"Between this and other Hospitals with which we are usually compared, there are certain differences tending in the direction of greater cost at this Hospital. These may be summarised as follows:—

- "(a) The smaller wards in this Hospital.
- "(b) The nature and plan of the buildings of the Hospital and the defects due to the unfinished state of the building scheme, e.g., the absence of sufficient power-lifts and the insufficiency in size of the hot-water and steam-boiler plant.

"(c) The fact that nearly half of the buildings are old and were originally not well built, causing considerable expenditure in repairs.

"(d) The fact, following from the above, that larger numbers of persons have to be employed for the service of the Hospital.

"Until the scheme of improvement and enlargement of buildings and equipment which the Committee have in mind can be carried out, it will not be possible to secure greater economy in administration."

(40) *Royal Chest Hospital*.—"The In-patient Department, which since July 1915 had been occupied by sick and wounded soldiers and sailors, was demobilised by the Military Authorities on March 31, 1919. The wards were then closed for about two months for cleaning purposes, but owing to the difficulty experienced in obtaining nurses it was not found possible to open the whole of the beds until late in the year. This, with the reduction in the number of available beds from 110 to the pre-war number of 80, explains the decrease in the average number of occupied beds from 86 to 47.

"In changing over to pre-war work, after four years of military occupation, new equipment, repairs, etc., were necessary, which increased the expenditure under the headings of 'Instruments and Appliances,' 'Furniture,' 'Bedding and Linen,' 'Hardware,' and 'Uniforms.'"

(41) *St. Andrew's Hospital*.—"After demobilisation we had unusual heavy expenditure in order to put the Hospital in pre-war condition. We had great difficulty in securing the necessary labour, and this prevented us from receiving our usual patients. At the same time the expenses of nursing, salaries, etc., were not reduced."

(42) *St. Columba's Hospital*.—"The Hospital was closed for three months for repairs, consequently the number of patients treated is below the average."

(43) *St. George's Hospital*.—"The increase in the cost per occupied bed is attributable to the very great increase in the cost of all provisions, drugs, fuel, &c., and to the fact that it was found necessary to further increase the wages of the nursing staff, and also the war bonus to the servants.

"It may be also pointed out that there is again a low daily average, which is accounted for by the necessity for closing four wards (with a complement of 59 beds) for repainting and redecoration.

"Attention is drawn to the large number of major operations performed, viz., 2,018, which is a criterion of the serious nature of many of the cases admitted."

(44) *St. John's Hospital for Diseases of the Skin*.—"The comparatively high cost for out-patient attendance is affected by the cost of the Venereal Diseases Department, both with regard to drugs and payment of officers, whose salaries amount to £580."

(45) *St. Saviour's Hospital*.—"During the past year the Hospital was closed for over six weeks in order to carry out extensive cleaning and repairs and alterations, part of which was put off owing to difficulties caused by the war."

(46) *St. Thomas's Hospital*.—"The Management call attention to the fact that the cost per bed for the year is unusually high, and is due to circumstances which it was practically impossible to control. These may be summarised as follows:—

- "(a) The treatment during the first three months of the year of military patients on special diet scale.
- "(b) The retention of two of the wards for the treatment of officers, who were much more costly than the average patient.
- "(c) The changing of the wards from military to civilian use with consequent reduction in average number of beds occupied.
- "(d) The large number of wounded soldiers treated in the Physio-therapy Department, involving the housing and feeding of about 60 massage pupils.
- "(e) Expensive treatments in the medical electrical department.
- "(f) Re-equipment, cleaning, and restoration after the war.
- "(g) Increased cost of 'washing,' coal and gas.
- "(h) Cost of Novasenobillon for the Venereal Department and of x-ray work for Lambeth Tuberculosis Dispensary.
- "(i) Appointment of paid full-time medical officers in charge of special departments.
- "(j) The development of 'Social' Welfare of all patients under treatment."

(47) *South London Hospital for Women*.—"The Board of Management beg to submit that the expenditure is relatively high by reason of the facts:—

- "(a) That the administrative portion of the building is designed to meet the requirements of a Hospital having an accommodation equal to twice that of its present size, it being intended to enlarge to this extent when conditions permit.
- "(b) That it has been found necessary to engage private nurses to fill temporary vacancies on the nursing staff.
- "(c) That the Hospital is an approved centre for the treatment of Venereal Diseases.
- "(d) That owing to shortage of nursing staff it was found necessary to close the children's ward for the first five months of 1919, thus lessening the average number of persons resident daily."

(48) *University College Hospital*.—"The cost per occupied bed has risen from £94 7s. 6d. to £187 16s. 10d., and the average cost per in-patient from £9 11s. 7d. to £10 15s. 11d.

"In explanation of the large increase of £48 in the cost per occupied bed, it should be stated that owing to the closing of the Military Extension Hospital at the end of March, to the gradual process of evacuating the Military Wards in the Hospital during the earlier months of the year, and to the closing of these wards for long periods for redecoration, the average number of in-patients resident daily was reduced from 460 to 309, and that, in consequence, the incidence of the permanent establishment charges was proportionately heavier on each occupied bed. These charges represent approximately two-thirds of the increase, the remaining one-third being attributable to the increased cost of maintenance as compared with 1918."

(49) *Woolwich and Plumstead Cottage Hospital*.—"The Governors wish to point out that, in comparing the cost per patient in this Hospital with other institutions, it should be noted that the expenditure on maintenance, of course, includes the cost of maintaining the necessary staff. If the accommodation were available, the same staff could treat a much larger number of patients, and the cost per patient would be correspondingly reduced. The nursing and domestic staff comprises eight persons, and the average number of patients resident daily is only eight."

1921

To HIS ROYAL HIGHNESS THE PRINCE OF WALES, *President of King Edward's Hospital Fund for London.*

SIR,

We have the honour humbly to submit the Eighteenth Annual Statistical Report, prepared by Mr. Maynard from the published accounts of one hundred and twelve London Hospitals and from returns made to the Fund.

These Hospitals are :—

- 11 General Hospitals, with Medical Schools and with an average of over 100 beds in daily occupation.
- 8 General Hospitals, without Medical Schools and with an average of over 100 beds in daily occupation.
- 13 Smaller General Hospitals.
- 3 Consumption Hospitals.
- 5 Hospitals for Women.
- 7 Hospitals for Children
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 14 Cottage Hospitals.
- 8 Lying-in Hospitals.
- 35 Unclassified Hospitals.

112

In these Hospitals,* together with St. Bartholomew's and Cancer, the figures for 1920 were as follows :—

Beds in average daily occupation	...	...	10,465
In-patients admitted	...	...	165,787
Number of Out-patients	...	...	1,482,894
Out-patient attendances	...	...	6,473,831

The total ordinary expenditure during the year at these Hospitals (with St. Bartholomew's and the Cancer Hospitals), including Maintenance, Administration, Rent, Rates, and Taxes, but excluding capital expenditure, interest on borrowed money, and contributions to the maintenance of Convalescent Homes and Country branches, amounted to £2,698,921. The corresponding figure in 1913 was £1,149,106.

The London Voluntary Hospitals thus had in 1920 to provide, as compared with 1913, an additional amount of £1,549,815, or an increase of nearly 135 per cent.

In the effort to meet this rise in expenditure the hospitals succeeded in increasing their income in comparison with 1913 by 66 per cent.

* See note † on page 9.

The amount collected from the public in annual subscriptions, donations, etc., increased by about 75 per cent., and the grants from the three Central Funds by about 60 per cent. Payments by public authorities for specific work done, which in 1913 amounted to only £11,000, brought in about £300,000 in 1920, while contributions by individual patients towards the cost of their own treatment increased from £78,000 to about £240,000.

The deficiency for the year 1920 was made up, taking the London hospitals as a whole, by the emergency distribution of £250,000 from the King's Fund, and the grants of £200,000 made by the National Relief Fund in reduction of war deficits: neither of these grants can recur.

The method of meeting the deficit in 1921 and of re-establishing the finances of the voluntary hospitals on a permanent basis has been surveyed by Lord Cave's Committee, and the Voluntary Hospitals Commission set up by the Ministry of Health in accordance with their recommendation, the King's Fund as the central committee for the London district, and the hospitals themselves, are actively engaged in working out the details of the scheme.

The King's Fund Statistical Report deals principally with the expenditure of hospitals, but on the equally important question of income we may be permitted to quote the view of Lord Cave's Committee that the key to the finance of Voluntary Hospitals will be found in payments made by the class which uses hospitals. Experiments are already in progress, and it remains to be proved whether in London the wage-earning class and the lower salaried class prefer to pay for their treatment when they require it or to make provision by payment in advance—and, if so, whether a definite provident scheme appeals to many of them. On the general proposition that the contributions to hospitals must in future be sought from a wider class than in the past we fully agree with Lord Cave's conclusion.

Lord Cave's Committee express confidence that if the recommendations of their Report are carried out, "it will be within the power of those having control of our hospitals, by means of economy in management and energy in interesting the public in their work, to maintain that voluntary system of which we are justly proud."

Economy in management is the department of reorganisation with which the King's Fund Statistical Report is primarily concerned, and Lord Cave's Committee make various recommendations on this subject, including the extension, through the Voluntary Hospitals Committees for different parts of the country, of the use of comparative statistics of cost.

It may, therefore, not be out of place to recall the experience which the King's Fund has had of the value of comparative statistics. The issue of the early Reports, beginning in 1904, was followed by savings estimated at £47,000 a year. During the first ten years a series of improvements in the statistical methods were made, with the assistance of the hospitals themselves; and these were all embodied, in August 1914, in a new edition of the Revised Uniform System. It is impossible to say how far the continued issue of the Reports during the war assisted the London Hospitals to control their expenditure, though the statistics published by Lord Cave's Committee

show that the percentage increases in cost of working between 1913 and 1920 were considerably less in London than in the Provinces.* Improvements of statistics were necessarily suspended during the war, but are now being considered by a special Committee of the Fund, to whom the various suggestions which have accumulated since 1914 have been referred.

There is reason to hope, therefore, that the recommendation of Lord Cave's Committee may lead to an extension of interest in the subject and to an exchange of experience between London and the Provinces which will be of mutual benefit in controlling Hospital expenditure and improving Hospital Statistics.

We have the honour to be, Sir,
Your obedient humble Servants,
SOMERLEYTON,
FREDERICK M. FRY,
ALAN G. ANDERSON,
Honorary Secretaries.

September 30th, 1921.

* Section (A) of Appendix B to Lord Cave's Report shows the extent by which various items of expenditure increased between the years 1913 and 1920 in 473 hospitals which did not report any material alterations in size, etc., during the period, as follows:—

	In London, 84 Hospitals. Per cent. on 1913.		In Provinces, 389 Hospitals. Per cent. on 1913.	
Provisions	135	...	155	...
Surgery and Dispensary	138	...	160	...
Domestic	125	...	169	...
Salaries and Wages	145	...	146	...

PREFATORY NOTE.

The Statistical Report deals this year with the expenditure in 1920 of 112 Hospitals.*

Modification of the Report.

The Report this year again appears in the reduced form adopted for the sake of economy in cost, in postage, and in paper, and because much of the material which was useful in ordinary times was useless under the temporary conditions resulting from the war. The question of the enlargement and improvement of the Report has been referred to a special Committee who have had under their consideration all the suggestions that have come to the notice of the Fund since the issue of a fresh edition of the Revised Uniform System of Hospital Accounts in August 1914 and the supplementary memorandum in January 1918. The inquiry had, however, to be temporarily suspended owing to pressure of work in connection with the hospital crisis, and to the prospect of further developments as the result of the report of Lord Cave's Committee.

Total Work and Expenditure in 1920; compared with 1913.

During the war the admission of naval and military patients, and after the Armistice the change back to civilian work,† caused great fluctuations in the numbers of occupied beds and in the cost of working, and made comparison with other years difficult. These fluctuations had ceased by the end of 1919, and it is possible, therefore, to make direct comparisons between 1920 and 1913. The following table‡ gives the figures.

	1913	1920
1. Total beds available	11,518	12,587
2. Average beds occupied	9,784	10,465
3. Total new in-patients	145,373	165,787
4. Total new out-patients	1,432,321	1,482,894
5. Total out-patient attendances	5,041,467	6,473,831
6. Total ordinary expenditure‡	£1,149,106	£2,698,921
7. Increase of ordinary expenditure over 1913 expressed as a percentage §	—	+ 135%

From this table it will be seen that while "occupied beds" increased about 7 per cent. and "out-patient attendances" about 30 per cent., the

* See note 22 on page 54.

† War pensioners and other ex-service men are counted as civilians.

‡ In this table the figures of St. Bartholomew's Hospital and Cancer Hospital are included. Country branches and Convalescent Homes are not included. Certain small adjustments have been made in the figures for 1913 to bring them into line with the figures available for 1920. The figures for the years 1914 to 1919 (including figures of Naval and Military patients treated "by understanding with the authorities") will be found in the Statistical Reports for 1916 to 1920.

§ Ordinary expenditure includes Maintenance, Administration, and Rent, Rates and Taxes, but not interest on loans, contributions in aid of Convalescent Homes or Country branches, or capital expenditure.

ordinary expenditure increased by no less than 135 per cent. In other words, the hospitals cost, for about the same work, two-and-a-third times as much in 1920 as in 1913.

During the same period the income of the London hospitals* increased by about 66 per cent.

The present difficulties of the hospitals are therefore due, not to any falling-off in the support received from the public, but to the fact that the increase in income has so far failed to keep pace with the increase in expenditure.

Naval and Military Patients.

The total number of naval and military patients treated in the London Voluntary Hospitals between 1913 and 1920 was 122,840, the total number of patient-days being 4,962,232. In a report prepared for the King's Fund for submission to Lord Cave's Committee, Messrs. Deloitte, Plender, Griffiths and Co. calculate that the cost of treating these patients exceeded the grants made by the Government by at least £515,000.

Increases in Cost between 1919 and 1920.

At several hospitals the cost per bed in 1919 was abnormally high owing to the temporary closing of beds during the change from military to civilian patients. In many cases, therefore, the increase of cost per bed in 1920 does not show to its full extent as compared with 1919, and at some hospitals an actual decrease is shown. In each group, however, taken as a whole, the average cost per bed in 1920 shows a considerable further increase.

Objects and Methods of the Reports.

No changes have been made in the form of the tables, and the following general statement is reprinted from previous Reports:—

The object of the detailed tables in the body of the Report is to assist hospital managers, and others interested, in controlling expenditure, and thus reducing as far as possible that part of the increase in cost which is not represented by an increase in the quantity or quality of the work done. The method adopted is to compare the expenditure at each Hospital with the expenditure at other Hospitals, and with the average of those Hospitals with which it is most comparable. Increases which are common to all Hospitals can thus be distinguished from those which are peculiar to any particular institution.

It is not suggested, however, that the lowest expenditure is intended to be taken as a model. All the comparisons are with the average; and even so, the Report must not be assumed necessarily to imply any criticism of expenditure in excess of the average. It only gives the figures as matters deserving the careful investigation of those concerned.

For the purpose of making the comparisons as fair as possible to the various Hospitals and as useful as possible as an aid to the control of

* Apart from the emergency grants in 1920 of £250,000 from the King's Fund and £200,000 from the National Relief Fund.

Expenditure, the following special principles are observed in the preparation of the Reports:

(a) The comparisons are limited to the items of expenditure which are the more capable of control. Certain items are thus excluded, sometimes because they are liable to wide and unavoidable variations as between one year and another or between one Hospital and another, sometimes because they cannot readily be modified by the Hospital Committees. These include the following, viz.: Repairs and other Establishment Charges, Official Salaries and Pensions, Finance, and Rent, Rates and Taxes.* It will therefore be borne in mind that, wherever in this Report a total or an average cost per bed or per out-patient attendance is stated, the figure is exclusive of the above-mentioned charges, and that variations in the figures cannot be explained by reference to variations in these items.

(b) The Hospitals are, as far as practicable, arranged in groups, so that the comparisons may be between Hospitals whose work is more or less closely comparable, and the group system is followed in all calculations of averages. This is not intended to prevent comparisons between Hospitals in different groups, a process for which, in fact, special facilities are provided in the preliminary alphabetical tables on pages 26 to 31. In the case of Hospitals which cannot be arranged in groups, the comparisons are confined to the preliminary tables and no group averages are calculated.

(c) The comparisons are made not only for the total expenditure on the various controllable items put together, but also for each of the main sub-heads of expenditure separately, viz.: Provisions, Surgery and Dispensary, Domestic, Salaries and Wages (maintenance), and Management other than Official Salaries and Pensions. This sub-division is intended to facilitate the discovery of the source of any excess which seems to require justification. It must be borne in mind, however, that at Hospitals where direct labour is employed to carry out work (such as, for example, the manufacture of drugs), which at other Hospitals is paid for in the purchase price, there will be a proportionately larger expenditure on Salaries and Wages and a correspondingly smaller expenditure on [say] Surgery and Dispensary or whatever the special heading may be.† Differences due to this cause cancel out in the comparisons of total expenditure.‡

Such statistical particulars as are available of the work done at the different Hospitals are set out in the first table relating to each group. This table shows the average length of stay of in-patients, and the average number of attendances per out-patient.

The group tables are preceded by general alphabetical tables giving particulars of work done, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year)

* Tables of expenditure, including all these headings except Rent, Rates and Taxes, can be found in the published Annual Reports of the individual Hospitals.

† Only in the cases of laundry staff and staff employed on annual cleaning or establishment renewals and repairs is this source of difference removed by transfers made in the course of preparing this Report (see notes 14 and 15 on page 53).

‡ Except that in the case of articles purchased the cost includes an allowance for various expenses incurred by the seller (e.g. Rent, Rates, Establishment, Depreciation, etc.) which are not included in this Report in the case of work done on the premises.

for all the institutions. This introductory section now forms in itself a very nearly complete statistical record of these figures for all the Hospitals of London which observe the Revised Uniform System of Accounts.*

Use of the Report.

In drawing conclusions from any of the tables it must be understood that they profess to give only the material for a comparison of outlay, and the question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. For this purpose many considerations must be taken into account which will readily occur to those concerned in Hospital management. Quite apart from special conditions arising out of the war, there may be differences in efficiency or in unavoidable circumstances, as well as in economy of administration. The question whether any of these considerations can be expressed in statistics at all, and, if so, whether they can be included in a manageable form in a report dealing with more than one hundred Hospitals, is already before the special Statistical Report Committee of Inquiry; as also is the question whether the figures of average length of stay can be so analysed as to point directly to any explanation. The Report gives the material which is at present available and capable of tabulation, for the purpose of assisting Hospital managers to see whether at their hospital the cost appears to be high, and in what departments the source of the excess is to be found; to reduce it wherever it cannot be justified; and thus to carry out one of the recommendations of Lord Cave's Committee for the re-establishment of the finances of the voluntary hospital system.†

H. R. MAYNARD,
Secretary.

September 30th, 1921.

TABLES.

* See note 23 on page 54.

† The following is the passage in the Final Report of Lord Cave's Committee (Cmd. 1335, page 16) dealing with the subjects mentioned in this paragraph :—

Reduction of Expenditure.

"24. We pass to the question what other economies in expenditure might be required as a condition of the grant.

"With regard to the general expenditure in the hospitals, it has not been possible for us in the time at our disposal to make systematic inquiry. But the striking differences in expenditure between hospitals of like size and character appear to indicate that there is room in some cases for greater economy. No doubt 'cost per occupied bed,' the test adopted by the King's Fund, is at best an unsatisfactory criterion. It is largely affected by the design and internal arrangements of a hospital, since a compact building costs less to light and heat and requires a smaller domestic staff than a straggling building with long corridors and wards at a distance from the kitchen; but nevertheless, the enormous differences between one hospital and another in 'cost per occupied bed' and 'cost per out-patient attendance' appear to show that there are cases in which further economies might be effected. We are also struck by the wide variation between the average period of treatment in hospitals dealing with substantially the same range of cases. We do not suggest that a rigid uniformity is either possible or desirable; but when one teaching hospital in London is found to be keeping its patients on an average twice as long as another, it is difficult to escape the conclusion that either the one is taking too many patients or the other too few. We think that the expenditure at every hospital should be carefully reviewed by the managers year by year, and also that the question of comparative expenditure might be usefully investigated by the Voluntary Hospitals Committee, when formed, with the King's Fund."

SECTION III.—LAUNDRY EXPENSES.

(Omitted this year.)

SECTION IV.—PRICES.

(Omitted this year.)

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

In some cases the Hospitals are unable to divide their beds under the headings indicated.

The *Royal London Ophthalmic* returns the number of beds as 188, 18 being empty in 1919.

(2) In the case of *St. Thomas's Hospital* the 40 paying beds are not included in the average number of beds in daily occupation, namely 440·84, and have been deducted in giving the total number of beds in the Hospital, namely 680. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them.

(3) The division of the total number of Out-patients in the General Hospitals into Casualties, Lying-in cases, and Others is based on figures supplied by the Hospitals; but the definition of a casualty differs in different Hospitals.

(4) The *Blackheath and Charlton Hospital*, the *Eliham and Mottingham Cottage Hospital*, the *Passmore Edwards Cottage Hospital*, *Wood Green*, the *Willesden Hospital*, the *Wimbledon Hospital*, and the *Woolwich and Plumstead Cottage Hospital*, although having no general Out-patients' Department, treat a small number of casualties, the cost of which is included in that of the In-Patients.

(5) The *Clapham Maternity Hospital* treats a small number of Out-patients at the In-patient Department at Clapham, and the cost of these Out-patients is included in the cost per bed.

(6) The *Hospital of St. John and St. Elizabeth* is not included in Table II. of Group II. because of the absence of an Out-patients' Department which renders the figures not comparable.

(7) *St. John's Hospital, Lewisham*.—The cost of the Bacteriological and X-Ray work done for the Lewisham Borough Council, the Lewisham Board of Guardians, and the Chatteris Urban District Council, is not included in the figures in this Report.

(8) *Consumption Hospitals*.—The figures relating to Country Branches are not included in this Report.

(9) *Lying-in Hospitals*.—The figures relating to the Training Schools of the various hospitals in this group are not included in this Report.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of *St. Vincent de Paul*. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages in Group III., Table II., with the result that the averages for Salaries and Wages and for total cost are not reduced by the low figure for Salaries and Wages at this Hospital.

(11) The *Chelsea Hospital for Women* was closed for one month for cleaning; *East London Hospital for Children* was closed for two months for repairs.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c. see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 16 and 20 below).

(13) *Provisions*.—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. At some Hospitals, however, the nurses return to the wards after taking private cases; during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic*.—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on Hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," "Establishment Charges," and "Rent, Rates and Taxes," as shown in the washing returns published by these Hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. The Tables showing the cost of washing usually appearing as Section III. of this Report are not published this year.

(15) *Establishment and Salaries and Wages*.—Comparisons of cost under the separate heads, and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences under the several heads cancel one another in the final columns giving total cost for all the headings combined.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses*.—For the purposes of this Report the total Management Expenses are divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain Hospitals patients are required, unless too poor, to provide certain articles of food. These are as follows: *City of London Maternity*—butter, sugar and eggs; *London Homœopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *London Temperance*—tea and sugar; *Middlesex*—tea and sugar; *Stoke Newington*—sugar; *University College*—tea and sugar; *Wimbledon*—butter and sugar.

(18) The following Hospitals treated patients in return for grants under the scheme of the Local Government Board for the diagnosis and treatment of venereal diseases, viz.:—*Boltonbroke*, *Charing Cross*, *Elizabeth Garrett Anderson*, *Great Northern Central*, *Guy's*, *Hospital for Sick Children*, *King's College, London*, *London Lock*, *Metropolitan*, *Middlesex*, *Miller*, *Royal Free*, *Royal London Ophthalmic*, *St. George's*, *St. John's (skin)*, *St. John's*,

Lewisham, St. Mary's, St. Thomas's, Seamen's (Dreadnought), South London Hospital for Women, University College, West London, Westminster.

As the cost of such patients is usually greater than the average, this tends to raise the cost per bed and per attendance at these Hospitals.

(19) *Average Number of Beds in Daily Occupation.*—These figures are obtained by dividing the total number of Patient-Days as supplied by the Hospitals by the number of days in the year 1920, viz., 366.

(20) (a) *Average Number of Days each Patient was Resident.*—These figures are given by the Hospitals in their Statistical Tables.

(b) The Group Averages are obtained by dividing the total number of Patient-Days by the total number of patients treated to a conclusion, i.e., the number of In-Patients in the Hospitals at the beginning of the year plus those admitted during the year minus those in the Hospitals at the end of the year.

(21) The totals and general averages corresponding to the columns marked (b) in Section I., Table I., for the different groups of Hospitals, are as follows:—

1 Group of Hospitals	IN-PATIENTS				OUT-PATIENTS		
	Beds		Total number of New In-Patients	Average number of days each Patient was resident	Total new Out-Patients	Total Attendances	Average number of Attendances per Out-Patient
	Total	Average number in daily occupation					
I. Larger General with Medical Schools	4,581	3,867.35	72,587	19.48	627,746	2,660,982	4.24

Totals	11,777	9,811.71	156,573	—	1,412,091	6,136,386	—

Note.—St. Bartholomew's Hospital and the Cancer Hospital are not included in any part of the above table

(22) The issue of these Reports was begun by Mr. J. Danvers Power, M.V.O., with the figures of 16 Hospitals for 1908. But the earlier ones contained confidential matter, and the first Report published was that for 1908.

(23) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a book issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 28 Fumival Street, Holborn, E.C. (3rd edition, August 1914, price 3s. net, 3s. 4d. post free); also Memorandum F. 111. 1/18, containing Supplementary Regulations (August 1914 to January 1918), including those dealing with work done by arrangement with Public Authorities, price 9d. net, post free. The System was drawn up by the three Funds after reports on the subject by Mr. John G. Griffiths, C.V.O., F.C.A., and a Committee of Hospital Secretaries.

NOTES RELATING TO THE ITEMS DEALT WITH IN THIS REPORT PRINTED IN COURTESY TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE KINDLY SUPPLIED.

(24) *Acton Hospital.*—"Thirty is our full number of beds, but we constantly have extra emergency beds in use."

(25) *Beckenham Cottage Hospital.*—"Three of the ordinary beds (cubicles) are used as pay-beds when not required for ordinary patients."

(26) *Chelsea Hospital for Women.*—"The Council much regret that owing (1) to the continued use of half the beds for the staff through want of a Nurses' Home, and (2) to the high prices still prevailing, the cost per bed is high for 1920."

(27) *City Maternity Hospital.*—" (a) Having regard to the development of the Ante-Natal and Child Welfare Department, it has been thought advisable to prepare an additional Statistical Table showing the allocation of expenditure under this head.

" (b) It will be observed that the expenditure shown in the three Statistical Tables does not include the cost of the Training School, which is shown on page 34 of the Annual Report."

(28) *East London Hospital for Children.*—"The Hospital was closed for two months while extensive repairs—held in abeyance during the war, but absolutely necessary for the preservation of the buildings—were carried out.

"The reduction in the number of patients is responsible for the increased cost per patient.

"The Isolation Block was closed during the year owing to shortage of nurses. It has now been reopened."

(29) *Elizabeth Garrett Anderson Hospital.*—"The Committee would point out that this is the only Hospital in its group which has a Venereal Diseases Treatment Centre.

"The Committee considers that its average weekly cost, in relation to other Hospitals of similar size, is higher than the true average per patient per week, and that this is due to the fact that the figures of the Continuation Hospital at New Barnet are not included. In this Continuation Hospital the patients are fully nursed, and are visited by the Physicians and Surgeons of the Hospital; they can, therefore, be transferred there by motor ambulance at a stage when they would be wholly unfit for discharge to a Convalescent Home. Unless the two places are viewed as one, the Hospital expenses will increase, since increase of beds at the House of Recovery means increase of cases at the Hospital at their expensive stage.

"The average occupied beds at Euston Road was 67, and at Barnet 25. The average stay of patients in the two institutions combined was, for the year 1920, 23 days, and the cost per bed per week, including transfer by ambulance, works out at £3 7s. 2½d. as compared with £3 17s. 4½d. if the period in Euston Road alone is considered."

(30) *Great Northern Central Hospital.*—"The Committee beg to draw attention to the fact that the Hospital is used entirely for cases in their most serious, and consequently most costly, stage of illness, the recovering cases being transferred immediately they can be moved by ambulance to the Hospital of Recovery. They believe that in most Hospitals these cases are retained in the Central Building. In comparing the average cost of the Great Northern with other Hospitals the average cost of the Hospital of Recovery should be taken into account."

(31) *Hampstead Hospital.*—"The figures include £104, the cost of maintaining a motor ambulance, besides £488 8s. 10d. charged to establishment.

"The Hospital provides accommodation for 20 private patients; . . . the average cost of maintaining each patient consequently appears higher than it would if the private patients were excluded."

(32) *London Homoeopathic Hospital.*—"There has to be a larger number of nurses on the staff than in Hospitals with Medical Schools, the nurses doing the work (dressings, &c.) done by students in Medical Schools."

(33) *London Hospital*.—"The Management report fully and in detail as to various points affecting the cost in 1920. These may be summarised as follows:—

"(a) Decreases since 1919 in the cost, under the heading of Provisions, principally due to the reduction in the price of milk. There was also a saving on other items under Provisions, owing to there being Officers' Wards for a short while in 1919 and none in 1920.

"(b) Increases due to increased prices; to a return to standard types of bandages, &c.; to the use of large quantities of Salvarsan; to the getting into full working order of the Dental and many other departments; to purchases of bedding linen, etc., which could no longer be deferred; to the making good of the arrears of War years of Furniture, Hardware and Crockery; to increase of charges for telephone service; to increases in salaries and wages (the latter in a great measure consequent upon the Award of the Court of Arbitration), including medical salaries in medical and surgical units and a full year's pay of the men returned from the War; and to the appointment of additional officers for the In-patients Pay Office; Appeal expenses also show an increase."

(34) *Mildmay Memorial Hospital*.—"Length of stay of each In-patient is to be accounted for by the long surgical-tuberculosis cases and by one private ward patient being on 366 days.

"Cost per bed is high because (partly) the three private wards cost a good deal more than the £4 4s. per week."

(35) *National Hospital for Diseases of the Heart*.—"The full number of beds in the Hospital is 42. In addition three temporary beds were used on various occasions during 1920."

(36) *Nelson Hospital*.—"Other management expenses for 1920 include two years' auditors' fees."

(37) *Poplar Hospital*.—"Please note in regard to Out-patients that we do not make any patients coming to the Casualty Department 'Medical Out-patients.'

"Our Out-patient Department, as distinguished from the Casualty Department, treats 'Surgical Out-patients' only."

(38) *Royal Chest Hospital*.—"The expenditure of the Tuberculosis Dispensary was £853 in excess of the previous year. This was chiefly due to further increases in the salaries of the three tuberculosis officers and mainly accounts for the increase of 8d. in the average cost per Out-patient attendance."

(39) *St. Andrew's Hospital*.—"The salaries of the staff have been increased all round. If all the beds had been occupied throughout the year, the average total cost of each patient per week would have been greatly reduced."

(40) *St. Columba's Hospital—Statistical Tables*.—"Eighteen beds were closed from July 13 to September 1 (50 days) owing to shortage of nurses. The total number of patient days was thereby reduced by from 2,000 to 1,457; the cost per bed per week was thereby increased from £3 6s. 2d. to £3 8s. 10d."

(41) *St. George's Hospital*.—"The increase in the cost per bed occupied is again attributable to the continued rise in the cost of provisions, drugs, fuel, &c., and in salaries and wages.

"Attention is drawn to the large number of major operations performed—viz., 2,222—which is a criterion of the serious nature of many of the cases admitted.

"In some cases the patients get their personal washing done themselves, but in the large majority of cases Hospital garments are used and are washed at the Hospital's expense.

"The hours on duty of the nursing staff have been reduced, and for this purpose it was necessary to engage twenty additional nurses."

(42) *St. John's Hospital (Lewisham)*.—"The increased cost of washing, cost per bed, and for the Out-patients' Department is consequent upon higher wages and the increase of all materials."

(43) *St. Mary's Hospital for Women and Children*.—"The full number of beds in the Hospital is 43. In addition several extra beds were used as an emergency during 1920."

(44) *St. Thomas's Hospital*.—"The Management call attention to various points affecting the cost in 1920. These may be summarised as follows:—

"(a) Four wards were unoccupied, representing 120 beds, 90 from lack of funds and shortage of nurses' accommodation, and a further 30 temporarily because a great deal of cleaning had to be undertaken, including the cleaning of the nurses' quarters, and temporary accommodation had to be found for these nurses.

"(b) Increase in the work of the special departments, especially in Venereal Diseases and X-Ray Departments and the Departments for Swedish Remedial Exercises and Medical Electrical Treatment, with consequent increases under the headings of Dispensary and Salaries and Wages.

"(c) All patients are interviewed—both in and out—by members of the Lady Almoners' Department.

"(d) Increased cost of 'washing,' coal, gas, and electric current.

"(e) Nurses' salaries increased; mechanics and porters have received rises under the arrangements of their various Unions.

"(f) Great increase in rate of payment of scrubbers."

(45) *The South London Hospital for Women*.—"The Board of Management desire to draw attention to the fact that the statistics for the year 1920 are materially affected by—

"(a) The closing of the wards in rotation during August and the early part of September for repairs to flooring and for thorough cleaning throughout.

"(b) The closing of the Children's Ward in the spring in consequence of an outbreak of infection and for several weeks later in the year owing to shortage of nurses.

"The Board would also point out that costs are relatively high on account of

"(a) Increased scales of pay for nursing and domestic staffs respectively.

"(b) The cost of the Venereal Diseases Department.

"(c) The fact that the accommodation includes 16 beds in private wards.

"(d) The situation in different localities of the In-patient and the Out-patient Departments."

(46) *University College Hospital*.—"The management call attention to the increases in prices and salaries, and to the facts that the expenditure of the Royal Ear Hospital is incorporated in the accounts for the first time, and that the stock of bedding and linen has had to be replenished."

(47) *Victoria Hospital for Children*.—"The chief causes in the increase of the average cost of each In-patient per week are due to the increases under 'Surgery and Dispensing,' 'Domestic,' 'Salaries and Wages,' and 'Establishment Charges.'

"Surgery and Dispensary.—A special Committee inquired into the increase of £720, and came to the conclusion that, having regard to the increased numbers of patients and the rise in price of drugs during that period, the accounts might be considered satisfactory.

"Domestic—Washing.—The average weekly number of pieces washed amounted to 3,051 in 1920, showing a reduction of five per week compared with 1919. Notwithstanding this, however, the expenditure for 1920 showed an increase of £322, due entirely to rise in laundry prices.

"Coal.—Increase of £364 in 1920 due to rise in price of coal.

"Salaries and Wages.—General increase under this heading unavoidable and caused through the movement for higher wages throughout the country in 1920."

THE HOSPITALS IN THE KING'S FUND STATISTICAL REPORT FOR 1913

Arranged in order of cost per bed, cost per Out-patient Attendance, and cost of the two departments combined, in respect of the items most readily controllable from year to year, viz. Provisions, Surgery and Dispensary, Domestic, Salaries and Wages, Maintenance, and Management (other than Official Salaries and Pensions.)

THE HOSPITALS IN THE KING'S FUND STATISTICAL REPORT FOR 1914.

Arranged in order of cost per bed and cost per Out-patient Attendance, in respect of the items most readily controllable from year to year, viz. Provisions, Surgery and Dispensary, Domestic, Salaries and Wages, Maintenance, and Management (other than Official Salaries and Pensions).

HOSPITALS IN ORDER OF COST, 1914.

Although, for the reasons stated in the Prefatory Note, the present issue of the Statistical Report contains no calculations based on comparisons between the cost at particular Hospitals and the average cost, the list of Hospitals in Order of Cost is privately circulated, as usual, for the convenience of Hospitals desiring to compare their cost with that of other institutions. In drawing conclusions from these comparisons, any special circumstances arising out of the War during 1914 have to be taken into consideration, in addition to the variations which result from the ordinary differences between one Hospital and another in normal times.

THE HOSPITALS IN THE KING'S FUND STATISTICAL REPORT FOR 1915.

Arranged in order of cost per bed and cost per Out-patient Attendance, in respect of the items most readily controllable from year to year, viz. Provisions, Surgery and Dispensary, Domestic, Salaries and Wages, Maintenance, and Management (other than Official Salaries and Pensions).

HOSPITALS IN ORDER OF COST, 1915.

Although, for the reasons stated in the Prefatory Note, the present issue of the Statistical Report contains no calculations based on comparisons between the cost at particular Hospitals and the average cost, the list of Hospitals in Order of Cost is privately circulated, as usual, for the convenience of Hospitals desiring to compare their cost with that of other institutions. In drawing conclusions from these comparisons, any special circumstances arising out of the War during 1915 have to be taken into consideration, in addition to the variations which result from the ordinary differences between one Hospital and another in normal times.

Average	98 13 10	Average	3-01
----------------	----------	----------------	------

King's College Hospital.—See note 6 on page 50 of Statistical Report.

St. Thomas's Hospital.—

At these Hospitals the patients (unless too poor) are required to provide tea and sugar.

At this Hospital " " " " " " " " butter.

in respect of the items most readily controllable from year to year, viz. Provisions, Surgery and Dispensary, Domestic,
Salaries and Wages, Maintenance, and Management (other than Official Salaries and Pensions).

‡ Amalgamated.

In the Out-patient column, blanks are left opposite the Hospitals which have no Out-patients.

Arranged in order of cost per Bed and cost per Out-patient Attendance,
in respect of the items most readily controllable from year to year, viz. Provisions, Surgery and Dispensary, Domestic,
Salaries and Wages, Maintenance, and Management (other than Official Salaries and Pensions).

I.—Larger General Hospitals:—

Although, for the reasons stated in the Prefatory Note, the present issue of the Statistical Report contains no calculations based on comparisons between the cost at particular Hospitals and the average cost, the list of Hospitals in Order of Cost is privately circulated, as usual, for the convenience of Hospitals desiring to compare their cost with that of other institutions. In drawing conclusions from these comparisons, any special circumstances arising out of the War during 1917 have to be taken into consideration, in addition to the variations which result from the ordinary differences between one Hospital and another in normal times.

Metropolitan Hospital.—See note 6 on page 50 of Statistical Report.

Mildmay Mission Hospital.—Closed for reconstruction of drainage system during a great part of the year.

† Omitting Salaries and Wages at the Italian Hospital.—See note 10 on page 51 of Statistical Report.

* At these Hospitals the patients (unless too poor) are required to provide ten.

HOSPITALS IN ORDER OF COST, 1919,
as compared with 1918.

Although, for the reasons stated in the Prefatory Note, the present issue of the Statistical Report contains no calculations based on comparisons between the cost at particular Hospitals and the average cost, the list of Hospitals in Order of Cost is privately circulated, as usual, for the convenience of Committees desiring to compare the cost at their Hospitals with that of other institutions and with the average cost. In drawing conclusions from these comparisons, the special circumstances arising out of the War have to be taken into consideration, in addition to the variations which result from the ordinary differences between one Hospital and another in normal times.

In particular, the cost per bed for the year 1919 was materially affected at several Hospitals by reductions in the average number of occupied beds, due to the permanent closing of temporary military beds, or to the temporary closing of permanent beds during their conversion from military to civil use, during renovations after the war, or for other causes. Extra columns have been added to the list giving statistics of these reductions.

Attention is called to the following extracts from the Prefatory Note to the Statistical Report :—

"It is not suggested, however, that the lowest expenditure is intended to be taken as a model. All the comparisons are with the average; and even so the Report must not be assumed necessarily to imply any criticism of expenditure in excess of the average."

“The question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency.”

Any observations which the Committee of a Hospital may desire to make on the figures relating to that Hospital, either in the list or in the Statistical Report itself, should be communicated to the Honorary Secretaries not later than October 31st.

K.F. 18/21.

HOSPITALS IN ORDER OF COST, 1920, as compared with 1919.

Although, for the reasons stated in the Prefatory Note, the present issue of the Statistical Report itself contains no calculations based on comparisons between the cost at particular Hospitals and the average cost, the list of Hospitals in Order of Cost is privately circulated, as usual, for the convenience of Committees desiring to compare the cost at their Hospitals with that of other institutions and with the average cost. The list also includes on page 6 the Order of Cost 1920 for In-patients and Out-patients combined, calculated according to the method adopted and set out in full in the Statistical Reports for the years 1909 to 1913. In drawing conclusions from these comparisons, reference should be made to the notes on pages 52 to 57 of the Statistical Report.

Attention is called to the following extracts from the Prefatory Note to the Statistical Report:—

“It is not suggested, however, that the lowest expenditure is intended to be taken as a model. All the comparisons are with the average; and even so the Report must not be assumed necessarily to imply any criticism of expenditure in excess of the average.”

“The question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency.”

In view of the present financial crisis and of the conditions attached in the Report of Lord Cave's Committee, and by the Treasury, to grants out of the temporary Government assistance to hospitals, it is particularly important that all Hospitals should carefully study the figures in this list, and in the Statistical Report itself. Where there is an excess of cost above the average the reasons should be ascertained as quickly as possible, with the aid of the Group Tables for each main head of expenditure; and the result of the enquiry should be reported to the King's Fund with a note of any further steps which the Hospital Committee may propose to take to reduce expenditure. (On this point circulars K.F.P. 51 and K.F.P. 52 will shortly be issued by the Fund.)

7 Walbrook, E.C. 4.
