STATISTICAL REPORT
ON THE
ORDINARY EXPENDITURE
OF
SIXTY-SIX LONDON HOSPITALS
FOR THE YEAR
1908

WITH APPENDICES

AUGUST, 1909

LONDON

PRINTED AND PUBLISHED FOR KING EDWARD'S HOSPITAL FUND FOR LONDON
BY SPOTTISWOODE & CO. LTD., 5 NEW-STREET SQUARE, E.C.

COPYRIGHT

To HIS ROYAL HIGHNESS THE PRINCE OF WALES, K.G., *President of
King Edward's Hospital Fund for London.*

SIR,

We have the honour humbly to submit the Sixth Annual Statistical Report, prepared by Mr. Maynard from the published accounts of sixty-six London Hospitals and from Returns made to the Fund.

The Hospitals consist of :—

- 17 General Hospitals which had an average of over 100 beds in daily occupation during 1908.
- 13 General Hospitals which had an average of under 100 beds in daily occupation during 1908.
- 4 Consumption Hospitals.
- 4 Hospitals for Women.
- 3 Hospitals for Women and Children.
- 7 Hospitals for Children.
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 10 Cottage Hospitals.

66

The Revised Uniform System of Accounts has now been in force for two complete years and may be considered to have passed the first experimental stage. It has accordingly been possible in the present report to take a further step in the direction of a complete comparison of hospital expenditure based on a separation of the expenses of the In-patient and Out-patient Departments. General tables have been added to each section comparing the total cost per bed and per out-patient attendance, so far as the items dealt with in the detailed tables in the Report are concerned. In an appendix these total figures have been collected together for convenience of reference. Since, however, the calculations must be looked upon as to some extent experimental, the hospitals have for this year been arranged in alphabetical order and not in any order based on total expensiveness.

With the approval of Your Royal Highness the Executive Committee have decided that in future the Report shall be placed on sale so as to

enable a wider public to appreciate the advances that have been made during the past few years in the theory and practice of hospital accounts and statistics and the care and trouble devoted to the subject by the officials of the various hospitals, with a view to securing a greater control of expenditure.

We are very far from suggesting that in any branch of this undertaking finality has been attained, but the Report marks a definite step forwards. The ultimate object, which is to ensure that from a given amount of money the greatest possible benefit may accrue to the sick poor, is one which must commend itself to the public.

We have the honour to be, Sir,

Your obedient, humble servants,

SAVILE CROSSLEY,
FREDERICK M. FRY,

Honorary Secretaries.

August 14, 1909.

NOTES.

ENCLOSURE.

(Privately circulated for the use of Hospital Officials only.)

Lowest prices being paid on December 31, 1908, in each of sixty-six Hospitals for thirty-three different articles.

PREFATORY NOTE.

As the Statistical Report is made public this year for the first time, it may be desirable to recapitulate some of the distinctive features which need to be borne in mind by those who are not familiar with the series, if accurate conclusions are to be drawn from the various Tables which it contains.

The primary objects of the Reports, the issue of which was begun by Mr. Danvers Power with the figures for the year 1903,* are to assist the hospitals themselves to secure an increased degree of control over expenditure by comparisons between the cost of working at different institutions, and to enable those interested in the hospitals to observe the results of the comparisons from year to year, and to appreciate and encourage the efforts which may be made in the direction of economy.

The scheme of the Reports may be briefly described as follows. The hospitals are first arranged in groups according to their size or the class of case treated—Larger General Hospitals, Smaller General Hospitals, Consumption Hospitals, Children's Hospitals, &c. In each group certain of the main items of expenditure—Provisions, Surgery and Dispensary, Salaries and Wages, &c., &c.—are taken separately, and the expenditure at each hospital on each item is compared with the average expenditure in the group. General tables are also given, comparing in the same way the total expenditure at each hospital upon all the items put together. Each hospital is thus enabled to see at a glance whether its expenditure on these items taken as a whole exceeds the average, and by how much it exceeds, and also in which particular items excess is to be found. The general tables, moreover, enable the position of any hospital in the order of total expensiveness as regards these items, in relation to the average, to be more or less accurately estimated.

It is a fundamental feature, therefore, of these Reports, that the whole of the tables are based upon comparisons with the average cost, and not with the minimum. There is no suggestion whatever that the cheapest hospital is necessarily to be held up as a model.

To secure a fair comparison, however, it is found to be necessary to select for the purpose, firstly, such hospitals as are really comparable

one with another and, secondly, such branches of expenditure as are readily controllable from year to year. The Reports, therefore, omit a considerable number of special hospitals which, for one reason or another, cannot usefully be arranged in groups for the purpose of calculating averages. They also omit, at least so far as the present annual series is concerned, various items of expenditure. These include, amongst others, Establishment Renewals and Repairs, the cost of which is liable to vary greatly from year to year, and depends not only upon economy of management, but also upon the age and quality of the buildings; and Official Salaries and Pensions, which to a great extent are subject to control only at more or less prolonged intervals. Such items as Rent, Rates and Taxes, and Interest on Capital, which are not included under Maintenance and Administration in the Income and Expenditure Account,* are also omitted.

The Reports, therefore, do not attempt to give a complete analysis of the expenditure of the hospitals of London, nor do the averages given therein represent the entire cost of maintaining a bed, or dealing with an out-patient attendance. The figures for the whole of Maintenance and Administration can be obtained from the statistical tables published, in accordance with the requirements of the Revised Uniform System of Accounts, in the Annual Reports of the hospitals themselves.† The Statistical Report average is less comprehensive from the point of view of absolute cost, but it affords a fairer basis for estimating comparative economy of management, as between various hospitals in one year, or the same hospital in different years.

Again, the Reports, even in making these comparisons, confine themselves to setting out the figures with all the necessary statistical explanations. They do not attempt to deal with the question whether or to what extent the cost is affected by differences in method or efficiency of treatment. The financial results are set forth for the consideration of the authorities of the various hospitals, who are thus enabled to discover the existence of any excess expenditure and to locate its position, with a view to ascertaining whether it is or is not preventable.

As evidence of the value of this method of comparison, it may be well to recall the experiences of the first series of Reports. The figures for 1905, which was the first complete year after the circulation of those for 1903, showed, as compared with the latter, that the 16 hospitals dealt with in the earlier Report had effected economies valued at £21,000 per annum. In 1906, when the number of hospitals had been for two years increased to 48, the additional saving represented a further £18,000 per annum. It can hardly be doubted that these economies were in a large measure due to the circulation of the comparative figures.

* See Note 21 on page 118.

† See Appendix II., page 11.
‡ See Appendix III., page 113.

The Report now deals with 66 hospitals, but as many of these were added only last year, and probably did not receive the figures until too late to affect their contracts for 1908, no great change is to be expected in the present Report. With regard to the other hospitals, there is no reason to suppose that the saving already mentioned, as compared with the years in which they first appeared in the Report, has not been maintained. But the fact that last year's Report was the first one based on the division of expenditure between in-patients and out-patients not only makes it difficult to compare the new series and the old, but renders last year's conclusions somewhat experimental, and to that extent unsuitable for generalisations as to total cost.

The present Report, therefore, rather than the last, forms a starting point for comparisons on the new basis, and the figures for the cost per bed and per out-patient attendance respectively for the various items of expenditure at the hospitals in each group are now for the first time combined into a general table; and in an appendix the more important figures from the general tables for the different groups are brought together in a form convenient for reference.* In view of the difficulty of arriving at a set of figures which will afford a means of comparison, both as regards the in-patient and out-patient departments and as regards each hospital taken as a whole, this table must be considered as to some extent experimental, and for the present the hospitals have been arranged in alphabetical order.

In one important respect, as was pointed out in the earlier series, the table of total cost affords a fairer means of comparing the different hospitals than do the tables dealing with the separate items of expenditure, in that the latter are liable to be affected by differences in methods of administration quite apart from the effect of such differences on economy of management. Thus, where a large number of officers receive board and lodging instead of additional money wages, the expenditure on Provisions is increased and that on Salaries and Wages is decreased. On the other hand, in hospitals where any part of the work elsewhere done by contract, such as the manufacture of drugs or the renewal of furniture, is carried out by direct labour, Salaries and Wages will be higher than they would otherwise be, and Surgery and Dispensary, Domestic, or whatever department the finished product belongs to, will be lower. These differences are equalised in the combined tables.

In the case of structural renewals and repairs, however, the cost if done by contract falls into "Establishment," and is not included in the calculations. Now that under the Revised Uniform System all renewals and repairs, whether ordinary or exceptional, are included in "Maintenance," this would be liable to cause considerable injustice, and it has

* See Appendix I, page 106.

therefore been necessary to transfer to "Establishment" that part of Salaries and Wages which, in hospitals with Works Departments, is incurred in respect of this item. A similar correction has to be applied to the figures in last year's Report before comparisons with this year's can fairly be made.

The special table comparing the cost of washing, whether done on hospital premises or put out to contract, is repeated, and also the table giving information (abstracted from a more detailed return, which is circulated privately for the use of hospital officials only) as to the lowest prices paid at various hospitals for a number of articles in general use. These tables are designed to assist the hospitals still further in locating excess expenditure, but to these, as to the other sections, the principle applies that it is the average rather than the minimum that is considered as the basis of comparison.

It will be evident that the preparation of the detailed accounts and statistics, and the apportionment of expenditure as between in-patients and out-patients, involves a great amount of work on the part of the Hospital Officials, and the Prefatory Note would be incomplete without an acknowledgment of the time and care which are expended in carrying out the revised system and in filling up the forms and returns required for the purposes of the Statistical Report.

H. R. MAYNARD, *Secretary.*

August 14, 1909.

NOTE.—The circumstances under which goods are purchased, the quantities and qualities, the date and length of contract, and conditions of delivery would have to be taken into consideration before assuming that the lowest prices paid by a single Hospital in any year were obtainable by every institution.

It must be remembered also that throughout the Statistical Report the comparisons are based on the average and not on the minimum.

APPENDIX I.

COMPARISONS OF TOTAL COST PER OCCUPIED BED, TOTAL COST PER OUT-PATIENT ATTENDANCE, AND TOTAL COST OF IN-PATIENTS AND OUT-PATIENTS COMBINED, IN RESPECT OF THE ITEMS DEALT WITH IN THIS REPORT.

In last year's Statistical Report, which was the first of the new series based on the separation of expenditure on in-patients from that on out-patients, it was considered desirable, for the reasons stated in the Prefatory Note to that Report, not to give any general table comparing the total cost per bed and per out-patient attendance at the different hospitals until after the results of the first apportionments of the separate items of expenditure had been made available for comparison.

In the present Report the further step has been taken of adding to each of the sections dealing with the various groups of hospitals a general table comparing the total cost for all the items dealt with in the detailed tables, and in this Appendix the main figures in these general tables are collected together in a form convenient for reference.

The third column of the following table gives the total cost per occupied bed per year for all the items of expenditure dealt with. The fourth gives the corresponding total cost per out-patient attendance. It will be observed that the order of total cost differs in many cases in the two tables. This may be due partly to differences in the character of the cases and of the treatment at the various out-patient departments as compared with the differences in the respective in-patient departments, and partly to variations in the degree of control exercised over expenditure where the management of the two departments is in different hands. But it is no doubt partly due to difference in the relative sizes of the out-patient departments as compared with the relative sizes of the in-patient departments.

It is this last difference which makes it difficult to combine the costs per unit of the two departments into a single table placing the hospitals in the order of total expensiveness. Various experimental methods have been suggested for the solution of this statistical problem, but for the present the same basis has been adopted as for the separate items of expenditure. The detailed calculations are worked out in the general tables for the various groups,* and the final figures from these general

* See Table VIII in each of Sections I to IX.

tables are reproduced here in the fifth column. This shows the amount which as a matter of fact each hospital spends, in both departments put together, above or below the amount which it would spend were its cost per occupied bed and its cost per out-patient attendance each equal to the average of the group to which it belongs. The actual figures are subject to all the reservations already referred to and (allowing for a further year's experience) to those mentioned in the Report for 1907, and they must not be taken for more than they are worth. But they at least afford an order of total cost based upon a definite principle.

It will be noticed that the combined figures (column v.) may give a different order of total expensiveness from that of the separate figures of cost per bed and cost per out-patient attendance (columns iii. and iv.), even where the orders given in the latter happen to agree. The reason for this is that the combined figures are affected to a far greater extent by differences in the scale of operations at the different hospitals. Columns iii. and iv. are affected by these only in so far as the cost per single unit tends to be greater or less according to considerations such as the size of contracts or the ratio of fixed charges to expenses which vary in proportion to the number of units. But column v. is the result of figures which, being originally based on columns iii. and iv., have been multiplied in each case by the number of units in the department concerned, so that a new and much more weighty factor depending on the size of the department is introduced. This distinction represents a fact. The excess or saving in cost per bed or per out-patient attendance as compared with the average may be the same at two hospitals, but in the case of the larger hospital or the larger department the money value of the excess or saving is greater.

The table must, however, be regarded for the present as more or less experimental, and for the purposes of this year's report the hospitals have been arranged, as in the detailed tables, in alphabetical order. Attention is also called once more to the fact that throughout these Reports the standard of comparison is the average cost, and not the minimum cost.

APPENDIX II.

THE REVISED INCOME AND EXPENDITURE ACCOUNT.

The following are the headings and sub-headings of Expenditure in the Income and Expenditure Account as required by the Revised Uniform System of Accounts. The total Expenditure on Maintenance and Administration forms the basis of the Statistical Tables published in accordance with the Revised System in the Annual Reports of all Hospitals applying for grants. A discussion of the reasons for the inclusion of various items in this Account, and the exclusion of various other items, will be found in the pamphlet describing the Revised System, and in the extracts from the Reports of Mr. J. G. Griffiths and of the Hospital Secretaries Committee appended thereto.*

(A)—MAINTENANCE:—

I. PROVISIONS—

1. Meat.
2. Fish, Poultry, &c.
3. Butter, Bacon, &c.
4. Eggs.
5. Milk.
6. Bread, Flour, &c.
7. Grocery.
8. Vegetables and Fruit.
9. Malt Liquors.
10. Aerated Water and Ice.

II. SURGERY AND DISPENSARY—

1. Drugs, Chemicals, Disinfectants, &c.
2. Dressings, Bandages, &c.
3. Instruments and Appliances.
4. Wines and Spirits.
5. Sundries.

III. DOMESTIC—

1. Renewal and repair of Furniture.
2. Renewal and repair of Bedding and Linen.
3. Renewal and repair of Hardware, Crockery, Brushes, &c.
4. Washing done off Hospital premises (average weekly number of articles.....).
5. Cleaning and Chandlery.
6. Water.

(A)—MAINTENANCE—(cont.)

7. Fuel and Lighting—

- (a) Coal.
- (b) Gas.
- (c) Electric Current.
- (d) Oil, Wood, &c.
8. Uniforms (Nurses', Porters', &c.).
9. Sundries.

IV. ESTABLISHMENT—

1. Insurance.
2. Renewals and Repairs.
3. Annual Cleaning.
4. Garden.

V. SALARIES, WAGES, &c.

1. Medical.
2. Dispensing.
3. Nursing.
4. Other Officers.
5. Mechanics, &c.
6. Porters.
7. Domestic Servants.
8. Scrubbers.
9. Pensions.

VI. MISCELLANEOUS—

1. Printing and Stationery.
2. Postages.
3. Advertisements.
4. Sundries.

* See note 22 on page 110.

(B)—ADMINISTRATION:—**I. MANAGEMENT —**

1. Official Salaries.

3. Official Printing and Stationery.
4. Official Postage and Telegrams.
5. Official Advertisements.
6. Law Charges.
7. Auditors' Fee.
8. Sundries.

II. FINANCE.

1. Appeals.
2. Commission.
3. Festivals, Bazaars, &c.

(C)—RENT, RATES, AND TAXES:—**I. RENT.****II. RATES AND TAXES.****(D)—EXTRAORDINARY EXPENDITURE:—****I. INTEREST.****II. CONTRIBUTIONS TO OTHER INSTITUTIONS.****III. FESTIVALS, BAZAARS, &c.—**

For new buildings or equipment, or the extinction of debt incurred for such purposes.

For endowment or other capital purposes.

APPENDIX III.**STATISTICS OF IN-PATIENTS AND OUT-PATIENTS.**

The following are the rules laid down in the Revised Uniform System for the computation of statistics and the forms prescribed for the apportionment of expenditure between In-Patients and Out-Patients. In the Statistical Tables the total expenditure on In-Patients added to the total expenditure on Out-Patients will always equal the total cost of Maintenance and Administration on the Income and Expenditure Account.

The principles upon which the statistics and apportionments are based are described in the Revised Uniform System of Hospital Accounts,* and in the extracts from the Reports of Mr. J. G. Griffiths and of the Hospital Secretaries Committee which are appended to it. The actual method of effecting the separation is left to the authorities of each individual hospital.

The form of the Statistical Tables has been slightly altered since the issue of last year's Report.

A.**RULES FOR THE ENUMERATION OF PATIENTS, &c., &c.**

(In accordance with the Revised Uniform System of Hospital Accounts.)

- (1) An in-patient is a person who is recorded in a book kept for that purpose as having been in the Hospital at a fixed hour of the day, which hour (when fixed) shall not be changed during the year.
- (2) The average number of beds in daily occupation, the average number of days each patient was resident (a), and all other statistical information relating to the number of in-patients, shall be calculated on the basis of (1), *e.g.*, the number of beds in daily occupation is to be calculated by taking the total of the daily numbers of in-patients for the year and dividing by the number of days in that year.
- (3) The average cost per in-patient (or per bed) per week is to be arrived at by dividing the average number of in-patients per day into the total cost of Maintenance and Administration (which will now require no deductions to be made, except the cost of out-patients as ascertained in 5), and dividing by the number of weeks in the year.
- (4) An out-patient (b) is a person attending continuously for the same ailment, for however long a period, between January 1st and December 31st inclusive.
- (5) The cost of out-patients is to be ascertained as nearly as possible, such cost being part of the total cost of Maintenance and Administration.

(a) Except as elsewhere provided.

(b) A casualty patient is either an in-patient or an out-patient. If taken in, he counts as an in-patient. If treated and sent home, he counts as an out-patient. Care must be taken that where a Hospital, for the purposes of its own arrangements or statistics, retains a distinction between casualty and other patients, no patient is counted twice, as in that event the total number of in-patients or out-patients, as the case may be, would be affected.

* See note 22 on page 119.

APPENDIX IV.

COST OF WASHING DONE ON HOSPITAL PREMISES.

The following is the form of return prescribed by the Revised Uniform System of Accounts for the use of Hospitals where the Washing, or any part of it, is done on Hospital premises, and full instructions are contained in that publication. The Expenditure on that, if any, which is done away from Hospital premises is shown under "Domestic," "Washing," in the Income and Expenditure Account.

It will be noticed that this return includes not only expenditure actually incurred during the year but also an estimate of the proper annual charges in respect of depreciation and interest on capital, while, since depreciation is added, expenditure on renewals is excluded. The resulting total represents the real cost of the year's washing to the hospital as calculated on the basis of the entire life of the laundry, and gives a figure comparable with the cost of the same washing if done by a trading company whose estimates of cost would necessarily include the same items.

WASHING RETURN.

TOTAL COST OF WASHING DONE ON HOSPITAL PREMISES						

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

(2) The *Mildmay Mission* and *Miller Hospitals* have not divided their beds as between Medical and Surgical, although both kinds of cases are treated in each of these Hospitals. The *West Ham* takes in a few urgent Medical cases when accommodation permits.

(3) In the case of *St. Thomas's Hospital* the thirty-eight paying beds, although included in the total number of beds in the Hospital, namely 651, are not included in the average number of beds in daily occupation, namely 498. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them. Included also in the total number of beds are 82 vacant beds.

(4) In all Tables, except those giving General Particulars, fractions of an occupied bed are neglected. Fractions of a penny have also been neglected.

(5) The *Royal London Ophthalmic* returns the total number of beds as 138, 20 being empty; the *Metropolitan* utilises 36 ward beds for nurses at present.

(6) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and others is based on figures supplied by the Hospitals; but the varying proportions of Casualties to others suggest that the definition of a casualty differs in different Hospitals.

(7) The figures for the *Middlesex Hospital* are exclusive of the beds maintained by the *Cancer Charity*.

(8) The *St. John's Hospital*, Lewisham, was entirely closed for two months in 1908 through lack of funds.

(9) The *Passmore Edwards Cottage Hospital*, Willesden, although having no general Out-Patients' Department, treated 549 Ophthalmic patients and 294 minor casualties; *Passmore Edwards*, Wood Green, treated 207 casualties; and the *Wimbledon Cottage Hospital* treated 17 persons as out-patients.

(10) The *French Hospital* includes *Vin Ordinaire* under Provisions.

(11) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of *St. Vincent de Paul*. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages.

(12) The *Passmore Edwards Cottage Hospital*, Acton, includes £202 19s. 6d., cost of District Nursing Institution, Invalid Kitchen, and Dispensary, in the Income and Expenditure Account, making the necessary deductions from the Statistical Tables of In-Patients and Out-Patients upon which the various Tables in this Report are based.

(13) In drawing conclusions from the comparisons in this table the relative number of women and children treated must be taken into consideration. The following figures have been supplied by the Hospitals:—

Grosvenor Hospital—

	Women	Children	Total
Beds occupied	81	0	81
Out-patient attendances	12,271	3,079	15,350
(Children=16 years or under.)			

Royal Waterloo—

Beds occupied	24	28	52
Out-patient attendances	24,484	9,099	34,583
(Children=under 14 years.)			

St. Mary's, Plaistow—

	Women	Children	Total
Beds occupied	5	28	33
Out-patient attendances	15,580	46,590	62,120
(Children=16 years or under.)			

The Grosvenor Hospital ceased to treat Children on December 31, 1908, and is now a Hospital for Women.

(14) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II.

(15) The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

(16) Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The expenditure on Out-Patients in respect of Provisions, which represents the Board of Officials engaged in the Out-Patient Departments, was included last year under Salaries and Wages. This year, in accordance with the changes made in the Statistical Tables (see Appendix III.), this expenditure (with the single exception mentioned in the note on page 47) has been transferred to Provisions. A slight allowance has therefore to be made for this change in comparing the figures in this Report with last year's figures.

(17) The cost of Provisions may also be affected by the maintenance of private nursing establishments. The nurses, however, in some cases return to the wards after taking private cases, and during their attendance on such cases they, of course, do not board in the Hospital.

(18) In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," and "Establishment Charges," as shown in the washing returns published by these hospitals, has been transferred to the heading "Domestic." As these tables deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure, while laundry renewals (if there have been any) are included. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. (See Appendix IV. for form of washing return, and Section X. for comparison of cost of washing taken by itself, including the charges for depreciation and interest, but excluding Renewals).

(19) In the case of such of the larger Hospitals as carry out a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred, for the reasons given in the Prefatory Note, from "Salaries and Wages" to "Establishment." The corresponding transfer for the previous year would have to be made before the figures in this Report under "Salaries and Wages," both as regards these Hospitals and as regards the average, could be compared with those in last year's Report.

(20) Tables VII. of each Section show the Total Management Expenses divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(21) The Reports for 1903 and 1904 contained confidential matter, and were printed for the private use of the Hospitals concerned and the General Council and Committees of the

Fund. The Reports for 1905, 1906, and 1907, though not published, were circulated rather more widely, being sent to subscribers of £1 and upwards to the Fund, and supplied for personal use to others directly concerned in Hospital management.

In 1904, mainly as the result of the issue of the first Report, a revision of the Uniform System of Hospital Accounts was undertaken. A Report on the subject was presented by Mr. J. G. Griffiths in October, 1905. This Report was taken into consideration by a Committee of Hospital Secretaries and Representatives of the three Funds, and in November, 1906, a Revised System was drafted which came into force on January 1, 1907. The Statistical Report for 1907 therefore began a new series, of which the present Report is the second issue. The alterations introduced by the Revised System, which included improvements in the Income and Expenditure Account and in the computation of statistics of work done, and provided for the separation of the expenditure on In-Patients from that on Out-Patients, are briefly described in the Prefatory Note to the Report for 1907. The actual regulations may be found in the pamphlet entitled "The Revised Uniform System of Hospital Accounts," which also contains extracts from Mr. Griffiths' Report, and from the Hospital Secretaries' Report (see Appendices II., III., and IV. and Note 22).

(22) The Revised Uniform System of Hospital Accounts is fully explained in a pamphlet issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 23 Furnival Street, Holborn, E.C. (2nd edition, February, 1909, price 1s. 3d. post free).

NOTES PRINTED IN COURTESY TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE
KINDLY SUPPLIED.

(23) *Charing Cross Hospital*.—"The cost per patient is necessarily somewhat high owing to the fact that 5 wards (87 beds) are closed for want of funds, while a large part of the Expenditure cannot be proportionately reduced.

"The Expenditure for 1908 is at a disadvantage as compared with 1907, because the average number of patients resident daily fell from 140 to 136."

(24) *Metropolitan Hospital*.—"In connection with Provisions, the Committee desire to point out that the patients are provided with Tea, Butter, and Sugar, and that special food has to be prepared for Jewish patients, which necessitates the employment of an extra Cook and the expense of an additional Kitchen.

"All employees are boarded at the Hospital. These include ten Officers, fifty-six Nurses, and thirty-six Porters and Servants.

"As the new buildings, according to the original plans, have not yet been completed, sufficient sleeping accommodation for the Nurses has not yet been provided, and the consequence is that two Wards for thirty-six patients have to be utilised as cubicles for the Sisters and Nurses, and additional rooms outside the Hospital have to be rented at a cost of £182 18s. per annum.

"There has to be a large proportion of Nurses on the Staff, as they do the work (dressings, &c.) generally done by the students in the larger Hospitals.

"As the Hospital is situated in a very poor neighbourhood, a large amount has to be spent annually in appealing for and obtaining funds from the more wealthy districts."

(25) *Middlesex Hospital*.—"During the past year the cleaning of the Hospital and the Nursing Home, which is undertaken every third year, was carried out. The expense in that connection, and on certain necessary repairs and renewals, had the effect of increasing 'Establishment' charges very considerably, and was also strongly reflected in the average total cost of each In-Patient per week.

"All pharmaceutical preparations are manufactured on the premises, e.g. Infusions, Decoctions, Tinctures, Liquid Extracts, Pills and Ointments, Plaster (strapping), Emulsions, Cod Liver Oil and Iron, etc."

(26) *Royal Free Hospital*.—"The item 'Provisions' covers the cost of food for Patients, Nurses, resident Medical Officers, male and female servants, Laundry hands, and Staff generally, all of whom are fed during the time they are employed at the Hospital.

"The Hospital provides the In-Patients with every necessary article of food, and the washing for the In-Patients is done on the premises free of cost to them."

(27) *St. George's Hospital*.—"Strict supervision has been exercised over the expenditure of each Department compatible with the proper treatment of the patients.

"The cost per bed is again high. This is accounted for by the Burton Ward, containing 11 beds, being utilised for a new electrical department, and by a Ward containing 23 beds being closed for a period of two months, while it was being converted from a Surgical to a Medical Ward. For this reason the daily average number of patients resident has decreased, and in consequence of an epidemic of scarlet fever, many beds have been closed at varying intervals.

"The majority of the contracts for provisions have been higher, consequently the cost has been more.

"All provisions, including tea, sugar, and butter, are supplied free to the Patients.

"When patients are unable to get their personal washing done, the Hospital does it for them."

(28) *St. Thomas's Hospital*.—"Such management work as is required in the Out-Patient department is under the supervision of the Steward's department, and therefore charged in Salaries and Wages (Maintenance), sub-head 'Other Officers.'"

(29) *Westminster Hospital*.—"The expenditure on 'Provisions' is swollen owing to the large number of the Staff provided with meals; and that on 'Salaries and Wages' is correspondingly reduced."

(30) *Bolingbroke Hospital*.—"In cases where no contracts exist, the prices of several firms are compared and, as far as possible, the cheapest articles are procured."

(31) *French Hospital and Dispensary*.—"We make no contracts with Suppliers, but obtain lowest quotations from several firms, selecting goods of best quality at lowest prices."

(32) *Hampstead General Hospital*.—"The Out-Patient figures refer to the Out-Patient Department at Hampstead, which was closed at the end of the first half-year, 1908, being merged in the Department at Kentish Town, the management of which was undertaken as the outcome of the amalgamation with the North-West London Hospital. A proportion of the expenditure at the Hospital in the second half-year is included in respect of urgent casualty cases which received attention at the Hospital itself."

(33) *London Homœopathic Hospital*.—"There are 104 Beds in the Hospital distributed among nine Wards, each with its separate Ward Kitchen, &c. This entails a larger number of skilled Nurses, Porters, and Scrubbers.

"Nursing.—We have no paying Probationers, therefore no Fees to reduce Nursing cost.

"There has to be a larger number of Nurses on the Staff than in Hospitals with Medical Schools. The Nurses of the Hospital do the work (dressings, &c.) done by Students in Hospitals with Schools.

"The Hospital does not employ Ward Maids, the work being done by Scrubbers. The amount is included under Domestic Wages, instead of Nursing, making Domestic Expenses higher.

"The Wages of Scrubbers living out are greater than those paid to Ward Maids living in.

"Domestic Wages.—Include Scrubbers' Wages.

"All the male servants are not boarded at the Hospital, but are paid extra wages in lieu of food, therefore Domestic Wages are more, Provisions less.

"Provisions.—The Patients' and Nurses' Fare is of the best and on a most liberal scale there being no limit to the amount of food that they may consume."

(34) *The Miller General Hospital for South-East London*.—"Owing to the small number of beds there are many articles which cannot be bought so advantageously as at a larger Hospital. Every effort is, however, being made to purchase at the lowest possible prices without sacrificing quality.

"It is also owing to the small number of beds that the cost per bed is so high.

"We have recently arranged with the firm who do our washing that a uniform price of 1s. per dozen shall be paid for all articles, 5% discount being allowed."

(35) *Hospital for Consumption and Diseases of the Chest, Brompton*.—"The average cost per bed is increased in consequence of closing 180 beds for about three weeks for the provision of new ward lavatories for the patients in one of the older wings of the Hospital."

(36) *The Royal Hospital for Diseases of the Chest*.—"Surgery and Dispensary.—Under the heading of 'Instruments and Appliances' is included an amount of £39 18s. 2d. in connection with the X-Ray department.

"Establishment.—The increase under the heading of 'Renewals and Repairs' is due to the fact that additional improvements were made in the heating and hot water systems at a cost of £100.

"Salaries and Wages.—An amount of £251, being honoraria paid to the Medical Staff, is included under the sub-heading 'Medical.'"

(37) *Royal Waterloo Hospital for Children and Women*.—"The Board of Governors do not desire to make any special statement except that the accounts are kept in accordance with the requirements of the King's Fund; and that the supplies are obtained partly by contract

(tenders being invited from selected firms) and partly from approved tradesmen. The average cost of provisions, including the estimated cost of gifts, worked out at 6·78 per head per day, which shows that the system adopted is quite satisfactory."

(38) *Hospital for Sick Children*.—"Repairs during the year have been unusually heavy. £188 was spent on renewing the lavatories in four Wards, and £76 in mending the roof of the Nurses' House, which was in a dangerous condition.

"There has been considerable increase in the amount paid for coal, partly on account of the rise in prices, and partly on account of the Hospital's landlords having deprived it of the use of a doorway, which has added 1s. a ton to the price, the extra cost of portage.

"The opening of the new Out-patient Department has necessitated the addition of two more nurses to the Staff and three extra Scrubbers, and the building of the New Boiler House, the addition of a Night Porter, since the Stoker was no longer to act in that capacity."

(39) *Paddington Green Children's Hospital*.—"In-Patient Department.—*Re* milk. The Medical Committee of this Hospital being of opinion that the supply of milk for Patients in the wards should continue to be obtained from the Walker Gordon Laboratories, at a cost of 4½d. per litre, the extra cost of milk, due to this fact, in 1908 was £45 7s. 8d.

"Out-Patient Department.—*Re* cost of each Out-Patient attendance. The average number of attendances per Out-Patient in 1908 was 3·15 as compared with 2·90 in 1907.

"The supplies of medicines, surgical dressings, &c., given to Out-Patients were as follows :—

" Supply for 7 days	16,905	} 68,260 weekly supplies.
" " 14 "	19,021	
" " 21 "	2,868	
" " 28 "	1,181	
	39,970	
" Advice and treatment	13,800	
" Total attendances as registered	53,270	

(40) *Victoria Hospital for Children*.—"All the Wards were closed for one month to be re-painted—this reduced the average number of beds occupied.

"Expenditure: The increase in item IV. 'Establishment Charges' is due to an additional expenditure of £416 for painting the Wards, and part exterior of the Hospital.

"The geographical position of the Hospital and its distance from the market necessitates an increase in prices charged for many articles."

(41) *Central London Ophthalmic Hospital*.—"A steriliser and other appliances were purchased last year out of a grant of £100 'for equipment' from the King Edward's Hospital Fund, which will account for the increase under the heading 'Instruments and Appliances.'"

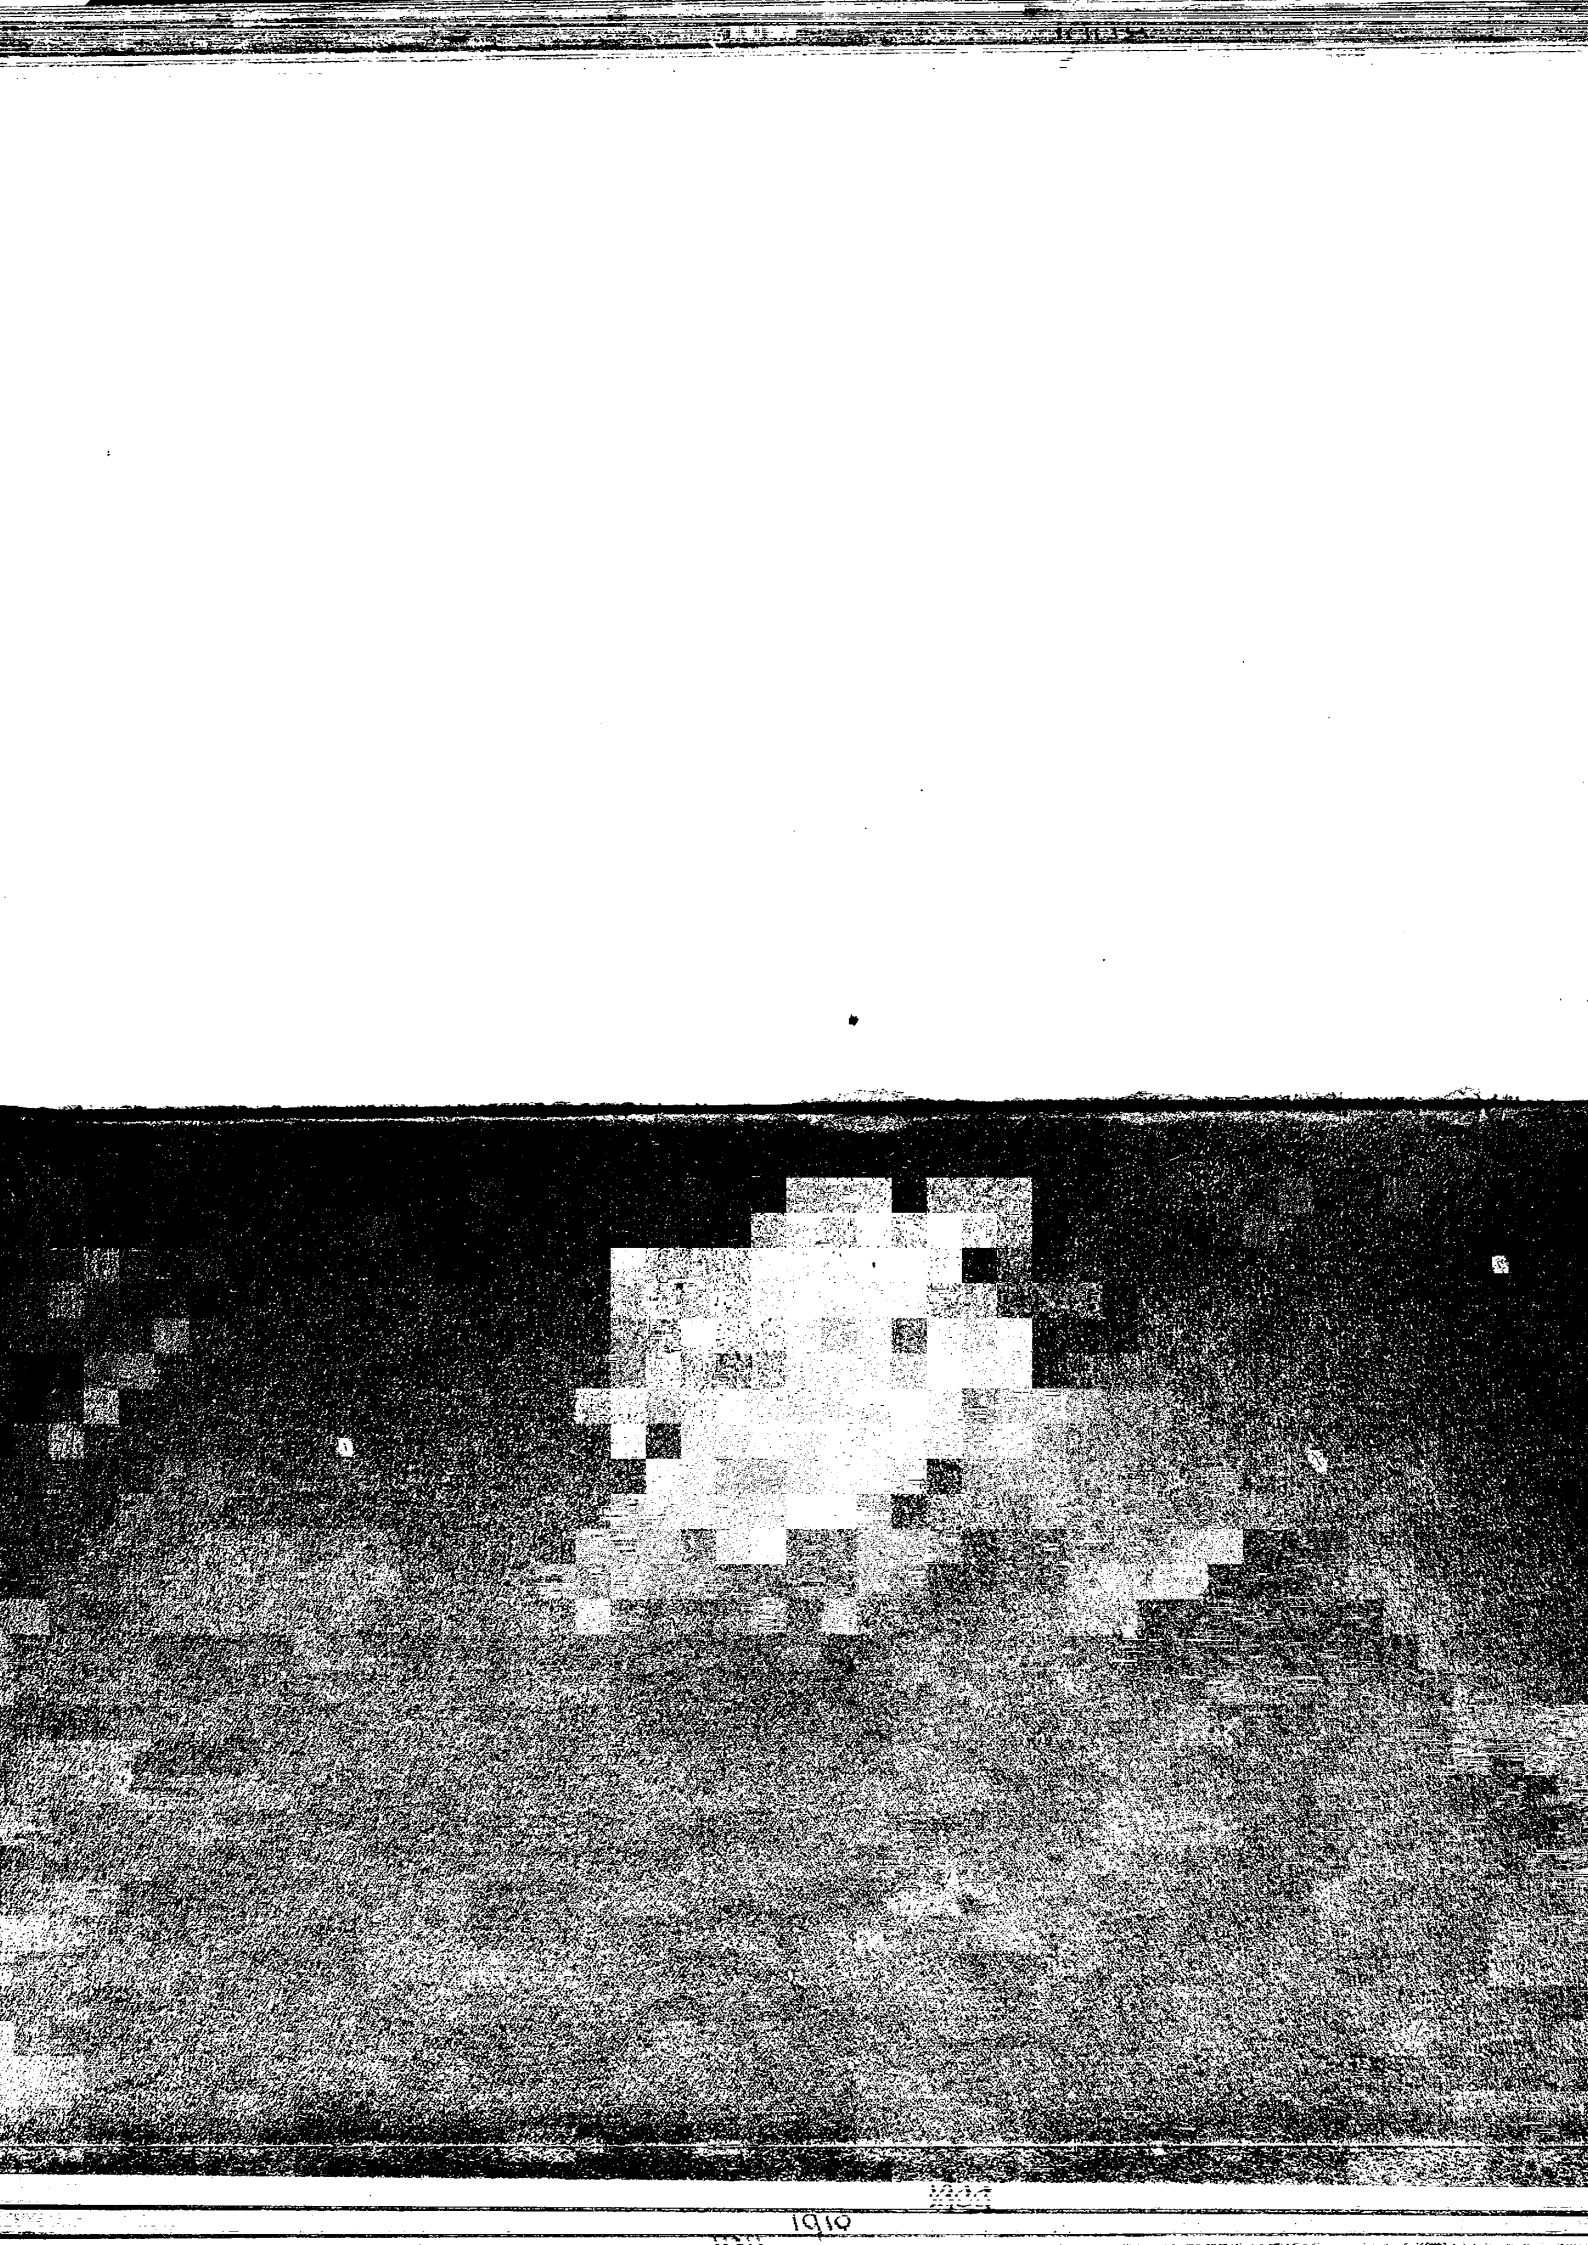

(42) *Royal London Ophthalmic Hospital*.—"Ten years have elapsed since the Hospital was moved into its new building, with new furniture and equipment.

"The Committee now have to meet increasing annual expenditure for renewals and repairs of various articles under the heading of 'Domestic,' and under 'Establishment' for renewals and repairs of the fittings and equipment of the building, and for the Annual Cleaning and Painting.

"The interior of the building requires re-painting throughout. The cost of painting the wood-work alone will greatly increase the expenditure for the next two years."

(43) *Eltham and Mottingham Cottage Hospital*.—"Practically all supplies are obtained from local tradesmen at current prices; the consumption is not considered sufficient in most cases to justify contracts.

"Nothing is now accepted at the Hospital unless sent in on a written order from the Matron. All goods are weighed or counted. The Ladies' House Committee scrutinise all tradesmen's books each month."

STATISTICAL REPORT

ON THE

ORDINARY EXPENDITURE

OF

NINETY-NINE LONDON HOSPITALS

FOR THE YEAR

1909

AUGUST, 1910

LONDON

PRINTED AND PUBLISHED FOR KING EDWARD'S HOSPITAL FUND FOR LONDON
BY SPOTTISWOODE & CO. LTD., 5 NEW-STREET SQUARE, E.C.

COPYRIGHT

To HIS SERENE HIGHNESS THE DUKE OF TECK, G.C.V.O., THE
VISCOUNT IVEAGH, K.P., AND THE SPEAKER OF THE
HOUSE OF COMMONS, *Governors of King Edward's Hospital
Fund for London.*

SIRS,

We have the honour to submit the Seventh Annual
Statistical Report, prepared by Mr. Maynard from the published
accounts of ninety-nine London Hospitals and from Returns made
to the Fund.

The Hospitals consist of:—

- 17 General Hospitals which had an average of over 100 beds in
daily occupation during 1909.
- 15 General Hospitals which had an average of under 100 beds in
daily occupation during 1909.
- 4 Consumption Hospitals.
- 5 Hospitals for Women.
- 7 Hospitals for Children.
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 11 Cottage Hospitals.
- 32 Unclassified Hospitals.

99

The inclusion of the Unclassified Hospitals represents not only
an increase in the size of the Report but also an enlargement of its scope,
which has hitherto been confined to institutions which could be arranged
in groups for the purpose of computing averages of cost. Particulars of all
the hospitals are given in an introductory section, while only those which
are arranged in groups are dealt with in the later part of the Report.
This opening section gives in a compendious form a considerable amount
of statistical information about the great majority of the Hospitals of
London.

It has now become possible to revive the practice, suspended owing
to the introduction of the Revised Uniform System of Accounts, of

making comparisons of cost between one year and another, and we are glad to note that, while there is reason to believe that in most departments of expenditure the economies achieved during the period of the first series of Reports, 1903-6, have been generally maintained, the comparison between 1909 and 1908 gives evidence of further reductions involving apparently a saving of some £6,000.

We consider that this result, representing as it does in the majority of cases an addition to the marked economies previously secured, gives the hospitals which have contributed to it a further claim to the recognition of the charitable public.

We have the honour to be, Sirs,

Your obedient servants,

SAVILE CROSSLEY,
FREDERICK M. FRY,

July 28, 1910.

Honorary Secretaries.

ENCLOSURE.

(Privately circulated for the use of Hospital Officials only.)

Lowest prices being paid on December 31, 1909, in each of one hundred and seven Hospitals for thirty-three different articles.

PREFATORY NOTE.

THE Statistical Report has this year been further enlarged by the addition of 33 institutions, making 99 in all, and it now deals with the expenditure of the great majority of the hospitals which apply for grants from the Fund.*

The form of the report has been slightly altered in order to meet the case of the institutions, nearly one third of the whole number, which for one reason or another cannot be arranged in groups for the purpose of calculating averages. The collection of these in a table by themselves would be likely to suggest comparisons with dissimilar hospitals in the same table and to discourage comparisons with hospitals, possibly more suitable for the purpose, in other parts of the report. They have, therefore, been included with all the other hospitals in an alphabetical series of tables at the beginning. These tables contain the general particulars, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year) for all the institutions, and if it should prove possible in the future to include all the hospitals on the books of the Fund, this introductory section would form in itself a very nearly complete statistical record of these figures for all the hospitals of London which observe the Revised Uniform System of Accounts.†

The expenditure of such of the hospitals as can be arranged in groups is analysed in detail in subsequent sections of the report by means of comparisons with the average of the group in the usual way. In case the juxtaposition of dissimilar hospitals in the general alphabetical table of cost per bed and per attendance should otherwise suggest misleading comparisons, footnote references to the group tables which follow have been added. This general table‡ thus incidentally serves as an index to the groups.

The exclusion from the annual comparisons of cost per bed and per out-patient attendance of the items not readily controllable from year to

* See note 19 on page 99. † See note 20 on page 99. ‡ Pages 26 to 31.

year, viz: Repairs and other Establishment charges, Official Salaries and Pensions, and Rent, Rates and Taxes, has been continued. Tables including the two former can be found in the published annual reports of the individual hospitals.

An additional column has been added to the final table of each group. The last column but one gives the amount by which the expenditure at each hospital is greater or less than it would be if the hospital had been worked at the average cost per bed and per out-patient attendance for its group. In the last column this amount is expressed as a percentage of the total expenditure of the hospital in question, and the excessive influence of the size of the institution on its position in the final list is thus eliminated. Pending further experience of this method of comparing the expenditure of each hospital taken as a whole, the list is still arranged in alphabetical order.

In drawing conclusions from any of the tables it must, however, be borne in mind that they profess to give only the material for a comparison of outlay. They do not and cannot take into consideration questions of the relative value produced as the result of the outlay, except in so far as evidence on this point can be derived from the columns in Section I., Table I., which give the average length of stay per in-patient and the average number of attendances per out-patient. It is evident from the figures in such a column, for instance, as that in Section I., Table III., showing the cost per bed and per out-patient attendance in Surgery and Dispensary at all the hospitals, that even if the degree of economy in management were the same at all, there would yet be wide differences in cost, representing differences in the class of case or the method of treatment. The same consideration applies, though in a far smaller degree, even to the various hospitals in each separate group. It is one of the features of the voluntary hospital system that it gives scope for variety and experimental development involving differences between different hospitals, and these may affect the relative cost sometimes in the various in-patient departments, sometimes in the out-patient. The question in each case is, therefore, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. In all the tables, it should be noted, it is the average that is taken as the basis of comparison, and there is no suggestion that the lowest is put forward as a model for imitation.

As the Report for 1907 was the first of the present series, and as the figures contained in it were, for the reasons stated in the last two prefatory notes, unsuitable as a basis of comparison either with the year before or

the year after, the present tables afford the first opportunity since the introduction of the Revised Uniform System of Accounts of making comparisons between one year and another.

It could hardly be expected that the hospitals whose expenditure has now been analysed for several years should show further reductions in cost on the same scale as those which followed the issue of the first reports. These reductions were valued in 1905, in the case of sixteen hospitals, at £21,000 per annum, and in 1906, with forty-eight hospitals, at an additional £18,000 per annum. Without in any way suggesting that the ideal of economy had then been reached, it would be unreasonable to expect this rate of decrease in cost to be continued for many consecutive years. So long, however, as the cost does not again increase, the saving is an annual one.

The first question that arises is, therefore, whether the reductions in cost recorded in the Report for 1906 have been maintained. The separation of expenditure on in-patients from that on out-patients and other changes in the method of showing the accounts make exact comparison impossible, but an analysis of the combined expenditure on the basis of the earlier Reports will give a rough indication. Such experimental comparisons as it has been possible to make in this way suggest that, except possibly in the case of Salaries and Wages in some of the groups, the progress shown in the earlier Reports has been fairly well maintained.* There may indeed be said to have been in most groups a further advance in the direction of economy, if the rise in prices during the interval is taken into consideration.†

* Comparisons have been made both in the total average cost and in the separate sub-headings for the various groups, excluding in all cases Surgery and Dispensary where the process is rendered impossible by the change in the method of reckoning out-patients. In most groups, except the larger general hospitals, Provisions and Domestic show decreases, while the increases at the larger general hospitals are small. Salaries and Wages are affected by the rule requiring that salaries of officers employed in making articles on the premises should no longer be charged to the headings under which the articles if purchased would belong. It is impossible to say without detailed analysis whether the rather marked increase which is shown on paper in Salaries and Wages in the case of one or two groups results mainly from this cause (in which case it should be balanced by decreases in Surgery and Dispensary, and elsewhere), or whether it indicates a continuance during the interval of the rise in this department, to which attention was called in the Report of 1906. As between 1908 and 1909 this heading shows, as a rule, neither an increase nor a decrease.

† In comparing, for instance, the cost of Provisions it would not be fair to ignore the general rise in food prices during the interval, as indicated by the Index Numbers published by the Board of Trade. Thus, although Provisions at the larger general hospitals show an increase of about 2%, the rise in wholesale food and drink prices is about 8%, and in retail prices of food nearly 5%. The basis of the Board of Trade Index Number is doubtless in neither case wholly suited to Hospital figures, but the margin between the percentage increase in cost and even the lower of the price percentages is probably more than sufficient to cover any error from this source. It should be noted in this connection, that the period 1903 to 1906, in which the economies referred to above were achieved, appears from the Index Numbers to have been one of almost stationary prices, while as between 1908 and 1909, although some of the articles in common consumption show an increase, the changes are on the whole too slight to have much bearing on comparisons of cost.

For a comparison between 1908 and 1909 the following table gives the necessary particulars, and it will be seen that, taking sixty Hospitals* together, out of the sixty-seven dealt with in last year's Report, there is a net decrease in cost representing a sum of about £6,000, while in only two small groups is there any increase.

HOSPITALS	Beds occupied	Average cost per Bed		Out-Patient Attendances	Average cost per Attendance	Total value of differences in cost		Net difference
		£	s. d.			£	£	
16 Larger General	1908	4,288	81 10 6	2,563,421	6-68	-4,603	+2,465	-2,138

Net Totals						-9,485	+3,369	-6,116

Particulars of the changes in the number of occupied beds and of out-patient attendances have been added, so that the influence of this element on changes in cost may be allowed for. The question of the bearing of increases in the number of beds (which, if permanent, may frequently be both a result and a cause of reduction in cost per bed), was dealt with in the prefatory note to the report for 1906. The cost per out-patient attendance is doubtless particularly liable to fluctuations through accidental changes in the numbers dealt with. The importance of these factors in any given case may, however, be tested to some extent

* Besides the Hospitals excluded for various reasons from the averages for 1909 in the later part of the Report the following are omitted in these comparisons owing to considerable changes in the number of occupied beds:—Hampstead General Hospital, City of London Hospital for Diseases of the Chest, and West End Hospital for Diseases of the Nervous System. Cases of temporary reduction in the number of beds, if on a small scale or for a short period, have not been omitted, as it is probable that taking a large number of Hospitals together these would be distributed fairly evenly as between one year and another.

by a comparison of the cost per unit (whether bed or attendance) for the different sub-headings of expenditure. In the present instance the reductions in cost per bed are, on the whole, just as marked in the departments, such as Surgery and Dispensary and to a less extent Provisions, where the total expenditure is likely to vary with the number of units, involving but slight change in cost per unit, as in the departments which more nearly approximate to fixed charges.* In the case of out-patients, however, the cost per attendance in Surgery and Dispensary in the larger groups has not appreciably altered, the increases being found in the items which, if looked on as fixed charges, might have been expected to show decreases per unit with the increase in numbers.

The presence of a factor independent of variations in numbers can also be tested by a comparison of total expenditure. Here it is found that in the only three cases in which a decrease in the number of units is accompanied by an increase in cost per unit, there is also an increase in the total expenditure.* In the Children's Hospitals an increase in the number of beds is accompanied by an actual decrease in total expenditure, and in the Hospitals for Women and the Cottage Hospitals both the in-patient and the out-patient figures show the same result. It is worth noting that 1909 was the first complete year since the Hospitals for Women appeared in the Statistical Report, so that in their case, as also in the case of several other institutions introduced at the same time, the experiences of the early Reports have been repeated.

Taking all these facts into consideration, it would appear that the net figure of about £6,000 fairly represents a real progress in the direction of increased economy during the year 1909, and in so far as the circulation of those Reports has assisted towards that end the result may be some reward to the Hospital officials for the labour involved in preparing the printed and written material required by the Fund for the purpose.

H. R. MAYNARD, *Secretary.*

July 28, 1910.

* To print these figures would make the table unduly cumbersome.

NOTE.—The circumstances under which goods are purchased, the quantities and qualities, the date and length of contract, and conditions of delivery would have to be taken into consideration before assuming that the lowest prices paid by a single Hospital in any year were obtainable by every institution.

It must be remembered also that throughout the Statistical Report the comparisons are based on the average and not on the minimum.

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

Where no entry appears the Hospitals are unable to divide their beds under these headings. The *West Ham* takes in a few urgent Medical cases when accommodation permits. The *Royal London Ophthalmic* returns the number of beds as 138, 20 being empty.

(2) In the case of *St. Thomas's Hospital* the 38 paying beds, although included in the total number of beds in the Hospital, namely 599, are not included in the average number of beds in daily occupation, namely 521. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them. There are two empty wards in addition.

(3) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and others is based on figures supplied by the Hospitals; but the varying proportions of Casualties to others suggest that the definition of a casualty differs in different Hospitals.

(4) The *Passmore Edwards Cottage Hospital*, Willesden, although having no general Out-Patients' Department, treated 310 casualties; *Passmore Edwards*, Wood Green, treated 216 casualties; the *South Wimbledon Cottage Hospital* treated 100 casualties; and the *Wimbledon Cottage Hospital* treated 22 persons as out-patients.

(5) The *Metropolitan Hospital* having been closed from 2nd July to the 14th November for structural alterations and improvements, and the number of occupied beds having consequently fallen from 105 in 1908 to 60 in 1909, the figures for this hospital have been excluded from the various Tables of Group I. For similar reasons the figures of the *French Hospital* and the *Hospital for Women* have also been excluded from the Tables of their respective groups, viz. II. and IV.

(6) The *Belgrave Hospital for Children* had two wards closed from 28th February, reducing the beds from 40 to 16, and the figures have consequently been excluded from the various averages in Group V., Tables I. to VI.

(7) On 26th March, the adult wing in Bulstrode Street of the *West End Hospital for Diseases of the Nervous System* was closed, thereby reducing the number of beds available from 77 to 38.

(8) The *Cancer Hospital* had half the wards closed during part of the year for cleaning and repairs.

(9) The expenditure of the *Hospital for Invalid Gentlewomen* relating to the period 26th June to 31st December, during which the Hospital was closed for rebuilding, is not included in this Report, and the number of occupied beds is the average for the rest of the year.

(9a) The sum of £1,000 has been paid by the *Royal National Orthopaedic Hospital* during the year to the *Charing Cross Hospital* as half-year's rent, but the sum includes also charges for Insurance, Repairs, Fuel and Lighting, Clerical and Domestic Sundries. Some of these items should appear as expenditure on In-Patients, and if included would slightly increase the average cost per bed. It is, however, impossible to allocate the various amounts under these headings, and thus the average cost per bed appears below the true figure.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of St. Vincent de Paul. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages.

(11) The *Passmore Edwards Cottage Hospital*, Acton, includes £253. 8s. 9d., cost of District Nursing Institution, Invalid Kitchen, and Dispensary, in the Income and Expenditure Account, making the necessary deductions from the Statistical Tables of In-Patients and Out-Patients upon which the various Tables in this Report are based, also a sum of £35. 19s. for Rent, Rates and Taxes of the Dispensary. These amounts are not included in this Report.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 15 and 19 below).

(13) *Provisions.*—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. The nurses, however, in some cases return to the wards after taking private cases, and during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic.*—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," and "Establishment Charges," as shown in the washing returns published by these hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. (See Section III. for comparison of cost of washing taken by itself, including the charges for depreciation and interest.)

(15) *Establishment and Salaries and Wages.*—Comparisons of cost in the separate Tables I. to V., and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences in the separate tables cancel one another in the general Table VI.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses.*—Tables V. of each Group show the Total Management Expenses divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain hospitals the patients are required, unless too poor, to provide certain articles of food. These are as follows: *London Homœopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *Middlesex*, tea and sugar; *University College*, tea and sugar.

(18) The totals and general averages corresponding to the columns marked (a) in Section I., Table I., for the various groups of Hospitals are as follows:—

Group	Beds		Average number of days each patient was resident	Total new Out-patients	Total Attendances	Average number of Attendances per Out-patient
	Total	Average number in daily occupation				
I. Larger General ...	5,067	4,435-96	24-63	912,461	2,689,698	2-95
II. Smaller General ...	949	735-31	25-21	187,405	562,174	3-00

Totals ...	10,141	8,615-91	—	1,523,190*	4,826,892	—

* Exclusive of Out-patients at the *Home and Infirmary for Sick Children*, reported as "not recorded."

(19) The issue of these Reports was begun by Mr. Danvers Power with the figures of 16 Hospitals for 1908. But the earlier ones contained confidential matter and the first Report published was that for 1908. A discussion of the objects and principles of the Reports may be found in the Prefatory Note to the latter.

(20) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a pamphlet issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 23 Farnival Street, Holborn, E.C. (2nd edition, February, 1909, price 1s. 3d. post free, with Supplement, December, 1909, price 6d.). The System was drawn up by the three Funds after reports on the subject by Mr. John J. Griffiths, F.C.A., and a committee of Hospital Secretaries.

NOTES PRINTED IN COURTESY TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE
KINDLY SUPPLIED.

(21) *Bolingbroke Hospital*.—"The cost per bed has been slightly reduced, and would, it is believed, have been still lower but for the general tendency of prices to increase. The cost for Out-patients is a little higher, partly from the same cause. As far as possible preference is given to local firms for articles required, and, in very many cases, the quantities purchased are so small that no Contract would be considered."

(22) *Charing Cross Hospital*.—"This year it will be seen that a reduction in cost has been made, but 'even with this reduction, the expenditure will still compare unfavourably in some respects with that of other Hospitals, and this must inevitably be so while wards and beds are kept unoccupied. When a Ward is put out of occupation it does not mean that the expenditure of the Hospital is proportionately reduced. Under certain items, such as Water, Insurance, Official Salaries, Appeals, and Commission, expenditure is not affected at all; under certain other items, such as Coal, Electricity, Repairs, and Annual Cleaning, it is affected only slightly; while there is hardly any item under which it is affected to the full extent of its cost in the accepted unit of comparison—the occupied bed. It follows that all this unaffected and unreduced expenditure is spread over the beds left in use, increasing the proportion which each bears. So that, while the Hospital reduces its expenditure by closing wards and beds, it at the same time increases the cost at which the beds actually occupied are maintained."

(23) *Eltham and Mottingham Cottage Hospital*.—"Nothing is now accepted at the Hospital unless sent in on the authority of a written order from the Matron. All goods are weighed or counted. The Ladies' House Committee scrutinise all Tradesmen's Books each month."

(24) *London Fever Hospital*.—"The cost per bed must necessarily be high in this Hospital, for the following reasons among others:—

"Infectious fevers are not constantly with us; their prevalence comes in waves—sometimes several in the course of a year. At one time there may not be more than 40 or 50 Patients in the Hospital, at another there will be 140 or 150, or even more. Hence for a part of the year many beds are vacant. A non-infectious Hospital usually keeps its beds full all the year round. One of the size of the London Fever Hospital would probably pass 1,500 Patients through its wards in a year, dividing its total cost by that number of Patients.

"We have to be prepared at all times for a rush of Patients, and the standing charges (which include a seasoned Nursing Staff) are always the same. Our numbers of Patients vary from 600 to 800 yearly, which number, divided into the total expenditure, would show double the cost per head of the non-infectious Hospital quoted above.

"Further, in this Hospital, Patients are kept nearly double the length of time they are kept in the ordinary non-infectious Hospital."

(25) *London Homoeopathic Hospital*.—"There are 104 Beds in the Hospital distributed among nine Wards, each with its separate Ward Kitchen, &c. This entails a larger number of skilled Nurses, Porters, and Scrubbers.

"Nursing.—We have no paying Probationers, therefore no 'Fees' to reduce Nursing cost.

"There has to be a larger number of Nurses on the Staff than in Hospitals with Medical Schools. The Nurses of the Hospital do the work (dressings, &c.) done by Students in Hospitals with Medical Schools.

"The Hospital does not employ Ward Maids, the work being done by Scrubbers. The amount is included under Domestic Wages, instead of Nursing, making Domestic Expenses higher.

"The Wages of Scrubbers living out are greater than those paid to Ward Maids living in.

"Domestic Wages.—Include Scrubbers' Wages.

"All male servants are not boarded at the Hospital, but are paid extra wages in lieu of food: therefore Domestic Wages are more, Provisions less.

"Provisions.—The Patients' and Nurses' Fare is of the best and on a most liberal scale, there being no limit to the amount of food they may consume.

"We make no Contracts for a long period, but obtain quotations from several firms, selecting goods of best quality at lowest prices."

(26) *The Miller General Hospital for South-East London*.—"Owing to the small number of beds there are many articles which cannot be bought so advantageously as at the larger Hospitals. Every effort is, however, being made to purchase at the lowest possible prices without sacrificing quality.

"It is also owing to the small number of beds that the cost per bed is so high.

(27) *National Anti-Vivisection Hospital*.—"The cost per Bed has been in 1909 considerably heightened from the amount of expenditure on Furniture.

"Salaries and Wages.—There is an increase in these owing to Nurses' yearly additions to scale, a slight increase in Secretary's remuneration, and the fact that the Hospital was for some months paying locum-tenens rates of Salary instead of a permanent yearly salary for Resident Medical Officer.

"Surgery and Dispensary.—Show an increase owing to sundry purchases of latest Plant and Appliances, and renovation of Motor in Electro-Therapeutic Department."

(28) *Paddington Green Children's Hospital*.—"In-patient Department.—Re milk. The Medical Committee of this Hospital being of the opinion that the supply of milk for Patients in the wards should continue to be obtained from the Walker-Gordon Laboratories, the extra cost of milk, due to this fact, in 1909 was £41 2s. 4d.

"Out-patient Department.—Re cost of each Out-patient attendance.

"The supplies of medicines, surgical dressings, &c., given to Out-patients were as follows:—

"Supply for 7 days	16,198	}=84,824 weekly supplies.
" " 14 "	18,891	
" " 21 "	6,920	
" " 28 "	2,521	
"Advice and treatment	14,105	
"Total attendances as registered	58,685	

(29) *Royal Free Hospital*.—"The item 'Provisions' covers the cost of food for Patients, Nurses, Resident Medical Officers, male and female Servants, Laundry hands, and Staff generally, all of whom are fed during the time they are employed at the Hospital.

"The Hospital provides the In-patients with every necessary article of food, and the washing for the In-patients is done on the premises free of cost to them."

(30) *Royal Hospital for Diseases of the Chest*.—"Surgery and Dispensary.—An amount of £29 in connection with the X-Ray department is included under the heading of 'Instruments and Appliances.'

"Salaries and Wages.—Under the heading of 'Medical' is included an amount of £250, being honoraria paid to the Medical Staff."

"Beds (80).—The closing of each Ward for one month in the Summer for cleaning purposes, and to enable the Nurses to take their holidays without calling in extra assistance, reduced the daily number of available beds from 80 to 75. In addition to this three beds (one in each Ward) are always kept vacant for the reception of Emergency Cases from the Out-patient Department, which further reduced the number to 72."

(31) *Royal London Ophthalmic Hospital*.—"The annual expenditure is now increasing for renewals and repairs of various articles under the heading 'Domestic.'"

(32) *Royal Waterloo Hospital for Children and Women*.—"The Supplies are obtained partly by contract (tenders being invited from selected firms) and partly from approved tradesmen. The average cost of provisions, including the cost (estimated) of gifts, worked out at 6'55 pence per head per day, which shows that the system adopted is quite satisfactory."

(38) *St. George's Hospital.*—"Strict supervision has been exercised over the expenditure of each Department compatible with the proper treatment of the Patients.

"The cost per Bed has been reduced from £120 15s. last year to £110 12s. 10d., and the cost per In-patient from £8 6s. 3d. to £7 3s. 5d.

"All provisions, including tea, sugar, and butter, are supplied free to the Patients.

"When patients are unable to get their personal washing done, the Hospital does it for them."

(34) *St. John's Hospital for Diseases of the Skin.*—"Occupied Beds.—The small proportion of occupied beds is accounted for in the fact that the Bedding requires frequent disinfection."

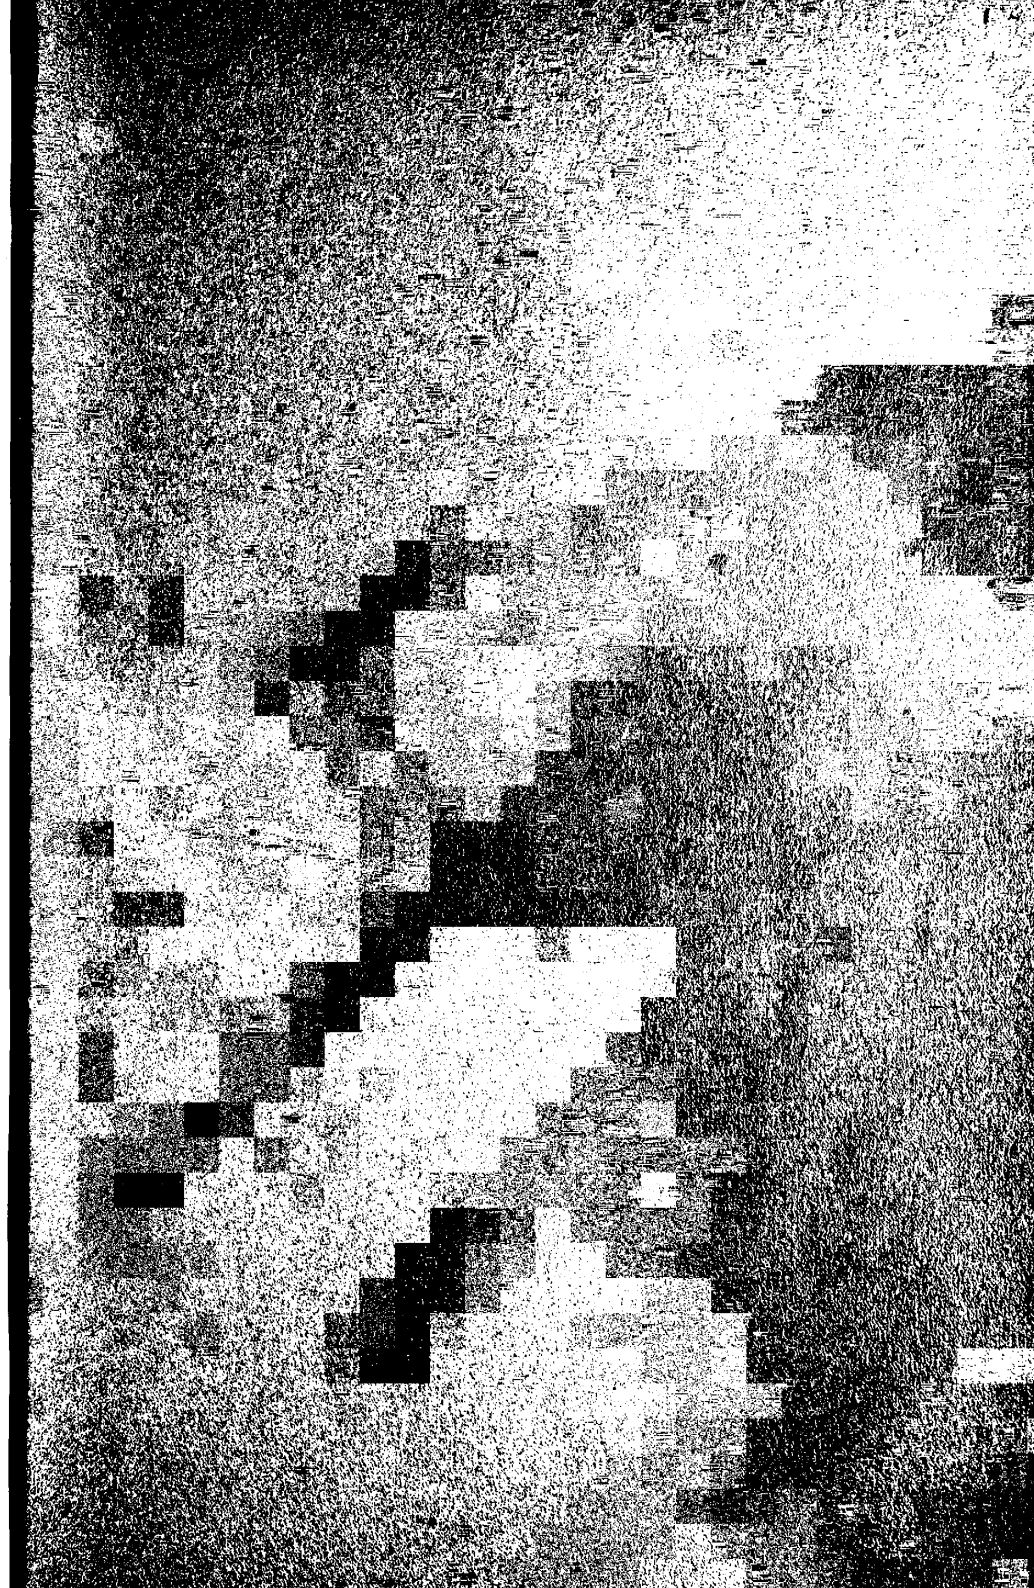

(35) *St. Thomas's Hospital.*—"The Electric Current for St. Thomas's Hospital is supplied from outside and, therefore, as in the case of washing, the cost stated covers all expenses, the Contractor naturally covering all deterioration of plant, and the table is therefore not strictly comparable with that of other Hospitals, where the cost of depreciation and interest on Capital Expenditure are not included in the Expenditure Table.

"St. Thomas's has a large and rigid system of Out-patient inspection. The more complete the system of inspection and the more the attendances are reduced by such inspection to those only needing the special treatment afforded, by the full equipment of Hospitals, the higher the average cost."

To HIS HIGHNESS THE DUKE OF TECK, G.C.V.O., THE VISCOUNT
IVEAGH, K.P., AND THE SPEAKER OF THE HOUSE OF
COMMONS, *Governors of King Edward's Hospital Fund for
London.*

SIRS,

We have the honour to submit the Eighth Annual
Statistical Report, prepared by Mr. Maynard from the published
accounts of one hundred and six London Hospitals and from
Returns made to the Fund.

The Hospitals consist of:—

- 16 General Hospitals which had an average of over 100 beds in daily occupation during 1910.
- 15 General Hospitals which had an average of under 100 beds in daily occupation during 1910.
- 4 Consumption Hospitals.
- 5 Hospitals for Women.
- 7 Hospitals for Children.
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 12 Cottage Hospitals.
- 8 Lying-in Hospitals.
- 31 Unclassified Hospitals.

106

With the inclusion of the Lying-in Hospitals the Report now deals with nearly all the Hospitals of London.

1910

We are glad to note not only that the economies achieved since the first issue of these Reports have been generally maintained from year to year, but that the comparison between 1910 and 1909 gives evidence of further reductions involving apparently a saving of over £2,000.

We consider that this evidence of continued efforts in the direction of economy redounds greatly to the credit of those Hospitals which have contributed to the result, and strengthens their claim upon the charitable public.

We have the honour to be, Sirs,

Your obedient servants,

SAVILE CROSSLEY,
FREDERICK M. FRY,

Honorary Secretaries.

August 4, 1911.

1911

London Hospital Association of Great Britain and Ireland

Annual Report for the year ending 31st December 1931

PREFATORY NOTE.

The Statistical Report has this year been further enlarged by the addition of 9 institutions, making 106 in all, and it now deals with the expenditure of very nearly all the hospitals which apply for grants from the Fund.*

The first section of the Report consists of an alphabetical series of tables giving the general statistical particulars, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year) for all the institutions. This introductory section now forms in itself a very nearly complete statistical record of these figures for all the hospitals of London which observe the Revised Uniform System of Accounts.†

The expenditure of such of the hospitals as can conveniently be arranged in groups is analysed in detail in subsequent sections of the Report by means of comparisons with the average of the group. In case the juxtaposition of dissimilar hospitals in the general alphabetical table of cost per bed and per attendance should otherwise suggest misleading comparisons, footnote references to the group tables which follow have been added. This general table‡ thus incidentally serves as an index to the groups.

The exclusion from the annual comparisons of cost per bed and per out-patient attendance of the items not readily controllable from year to year, viz: Repairs and other Establishment charges, Official Salaries and

Table of Contents listing sections I through VI and their corresponding page numbers.

SECTION I.

Table of Contents for Section I, listing various statistical items and their page numbers.

SECTION II.

Table of Contents for Section II, listing various statistical items and their page numbers.

SECTION III.

Table of Contents for Section III, listing various statistical items and their page numbers.

SECTION IV.

Table of Contents for Section IV, listing various statistical items and their page numbers.

Pensions, Finance, and Rent, Rates and Taxes, has been continued. Tables including the three former can be found in the published annual reports of the individual hospitals.

The final table of each group is arranged in the same way as last year. The last column but one gives the amount by which the expenditure at each hospital is greater or less than it would be if the hospital had been worked at the average cost per bed and per out-patient attendance for its group. In the last column this amount is expressed as a percentage of the total expenditure of the hospital in question, and the excessive influence of the size of the institution on its position in the final list is thus eliminated. Pending further experience of this method of comparing the expenditure of each hospital taken as a whole, the list is still arranged in alphabetical order.

* In drawing conclusions from any of the tables it must, however, be borne in mind that they profess to give only the material for a comparison of outlay, and the question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. In all the tables, it should be noted, it is the average that is taken as the basis of comparison, and there is no suggestion that the lowest is put forward as a model for imitation.

It can hardly be expected that the hospitals whose expenditure has now been analysed, for several years, should show further reductions in cost on the same scale as those which followed the issue of the first Reports. These reductions were valued in 1905, in the case of sixteen hospitals, at £21,000 per annum, and in 1906, with forty-eight hospitals, at an additional £18,000 per annum. As was shown in last year's Report, there is every reason to believe that these economies were maintained during the period when the change in the system of accounts rendered exact comparisons impossible; while, as between 1908 and 1909, the first comparable years of the second series of Reports, a further saving of £6,000 was shown by fifty-five hospitals. Without in any way suggesting that the ideal of economy had then been reached, it would be unreasonable to expect this rate of decrease in cost to be continued for many consecutive years. So long, however, as the cost does not again increase, the saving is an annual one.

For a comparison between 1909 and 1910 the following table gives the necessary particulars, and it will be seen that, taking fifty-seven Hospitals* together, out of the ninety-nine dealt with in last year's Report, there is a further net decrease in cost representing a sum of over £2,000, after allowing for the fact that in four small groups there is an increase.

HOSPITALS	Beds occupied	Average cost per Bed	Out-Patient Attendances	Average cost per Attendance	Total value of differences in cost		Net difference
					In-Patients	Out-Patients	
		£ s. d.		Pence	£	£	£
15 Larger General ... (1909)	4,064	79 1 0	2,515,424	6.87	- 2,309	+ 2,347	+ 2,746

			Net Totals		- 3,391	+ 1,185	- 2,206

Particulars of the changes in the number of occupied beds and of out-patient attendances have been added, so that the influence of this

* Besides the Hospitals excluded for various reasons from the averages for 1910 in the later part of the Report, and St. George's Hospital which no longer appears in the Report, the following are omitted in these comparisons owing to considerable changes either in the number of occupied beds or in some other factor in the calculation:—Hamstead General Hospital, Mount Vernon Hospital for Consumption, and West End Hospital for Diseases of the Nervous System. Cases of temporary reduction in the number of beds, if on a small scale or for a short period, have not been omitted, as it is probable that taking a large number of Hospitals together these would be distributed fairly evenly as between one year and another.

† The unclassified Hospitals have also been omitted, as a complete financial year has not elapsed since their first appearance in the Report.

0101

element on changes in cost may be allowed for. It will be noticed that it is in cost per bed that the chief reductions are shown, while the principal increases are in cost per out-patient attendance. The question of the bearing of increases in the number of beds (which, if permanent, may frequently be both a result and a cause of reduction in cost per bed) was dealt with in the prefatory note to the Report for 1906. The cost per out-patient attendance is doubtless particularly liable to fluctuations through accidental changes in the numbers dealt with. Various methods of testing the importance of these factors in any given case were discussed in last year's Report.

In any case the fact remains that in addition to the annual saving represented by the economies shown in the previous Reports, the net cost continues to show a progressive reduction. These successes have been achieved in spite of the development of new methods of treatment and the sustained rise in prices, and in so far as the circulation of these Reports has assisted towards that end the result may be some reward to the Hospital officials for the labour involved in preparing the printed and written material required by the Fund for the purpose.

H. R. MAYNARD, *Secretary.*

August 4, 1911.

NOTE.—The circumstances under which goods are purchased, the quantities and qualities, the date and length of contract, and conditions of delivery would have to be taken into consideration before assuming that the lowest prices paid by a single Hospital in any year were obtainable by every institution.

It must be remembered also that throughout the Statistical Report the comparisons are based on the average and not on the minimum.

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

Where no entry appears the Hospitals are unable to divide their beds under these headings. The *West Ham* takes in a few urgent Medical cases when accommodation permits. The *Royal London Ophthalmic* returns the number of beds as 188, 20 being empty.

(2) In the case of *St. Thomas's Hospital* the 38 paying beds, although included in the total number of beds in the Hospital, namely 620, are not included in the average number of beds in daily occupation, namely 516. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them. In addition there are 22 beds closed.

(3) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and others is based on figures supplied by the Hospitals; but the varying proportions of Casualties to others suggest that the definition of a casualty differs in different Hospitals.

(4) The *Passmore Edwards Cottage Hospital*, Willesden, the *Passmore Edwards Cottage Hospital*, Wood Green, the *South Wimbledon Cottage Hospital*, and the *Wimbledon Cottage Hospital*, although having no general Out-Patients' Department, treat a small number of casualties, the cost of these cases being included in that of the In-patients.

(5) The *French and London Homœopathic Hospitals*, having been closed during a great part of the year for structural alterations and repairs, and the number of occupied beds having consequently been considerably reduced, the figures for these hospitals have been excluded from the various Tables of Group II. For similar reasons the figures of the *Hospital for Women* and the *Passmore Edwards Cottage Hospital*, Wood Green, have also been excluded from the Tables of their respective groups, viz. IV. and VIII.

The *Belgrave Hospital for Children* had two wards closed from 28th February, 1909, to June 1910, reducing the beds from 40 to 16, and the figures have consequently been excluded from the various averages in Group V., Tables I. to VI.

(6) The excess in the number of beds occupied over the official number of beds available at the *Queen's Hospital for Children* and the *Hospital for Epilepsy* is due to the fact that, owing to the great demand for accommodation at these Hospitals, urgent cases are received into temporary beds.

(7) The expenditure of the *Florence Nightingale Hospital for Gentlewomen* relating to the period 1st January to 28th March, during which the Hospital was closed for rebuilding, is not included in this Report, and the number of occupied beds is the average for the rest of the year.

(8) *Consumption Hospitals*:—The figures relating to the Country Branches of the *Hospital for Consumption* and the *Mount Vernon Hospital for Consumption* are not included in this Report.

(9) *Lying-in-Hospitals*:—The figures relating to the Training Schools of the various hospitals in this group are not included in this Report.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of St. Vincent de Paul. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages.

(11) The *Passmore Edwards Cottage Hospital*, Acton, includes £244. 6s. 1d., cost of District Nursing Institution, Invalid Kitchen, and Dispensary, in the Income and Expenditure Account, making the necessary deductions from the Statistical Tables of In-Patients and Out-Patients upon which the various Tables in this Report are based, also a sum of £4. 19s. 4d. for Rent, Rates and Taxes of the Dispensary. These amounts are not included in this Report.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 15 and 20 below).

(13) *Provisions.*—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. The nurses, however, in some cases return to the wards after taking private cases, and during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic.*—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," and "Establishment Charges," as shown in the washing returns published by these hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. (See Section III. for comparison of cost of washing taken by itself, including the charges for depreciation and interest.)

(15) *Establishment and Salaries and Wages.*—Comparisons of cost in the separate Tables I. to V., and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences in the separate tables cancel one another in the general Table VI.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses.*—Tables V. of each Group show the Total Management Expenses divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain hospitals the patients are required, unless too poor, to provide certain articles of food. These are as follows: *London Homoeopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *Middlesex*, tea and sugar; *University College*, tea and sugar.

(18) The totals and general averages corresponding to the columns marked (a) in Section I., Table I., for the various groups of Hospitals, excluding those Hospitals that have been omitted for various reasons, are as follows:—

Group	Beds		Average number of days each patient was resident	Total new Out-patients	Total Attendances	Average number of Attendances per Out-patient
	Total	Average number in daily occupation				
I. Larger General ...	4,801	4,222-35	24-43	893,595	2,734,614	3-06
II. Smaller General ...	777	622-57	23-54	196,861	563,546	2-86
III. Consumption ...	703	647-60	61-21	26,218	127,227	4-85
IV. Hospitals for Women...	202	183-34	22-37	16,723	66,087	3-95
V. Children's ...	760	655-63	22-81	156,352	467,932	2-99
VI. Ophthalmic ...	241	200-46	16-49	113,575	291,938	2-57
VII. Hospitals for Epilepsy	239	230-20	58-40	6,907	86,335	12-50
VIII. Cottage...	248	175-27	22-41	6,704	30,220	4-51
IX. Lying-in ...	319	210-93	14-59	9,296	108,749	11-70
Unclassified Hospitals ...	1,659	1,295-12	—	88,963*	448,521	—
Totals ...	9,949	8,443-47	—	1,515,194*	4,925,169	—

* Exclusive of Out-patients at the *Home and Infirmary for Sick Children*, reported as "not recorded."

(19) The issue of these Reports was begun by Mr. Danvers Power with the figures of 16 Hospitals for 1903. But the earlier ones contained confidential matter, and the first Report published was that for 1908. A discussion of the objects and principles of the Reports may be found in the Prefatory Note to the latter.

(20) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a pamphlet issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 23 Furnival Street, Holborn, E.C. (2nd edition, February, 1909, price 1s. 3d. post free, with Supplement, February, 1911, price 6d.). The System was drawn up by the three Funds after reports on the subject by Mr. John G. Griffiths, F.C.A., and a committee of Hospital Secretaries.

NOTES PRINTED IN COURTESY TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE
KINDLY SUPPLIED.

(21) *Blackheath and Charlton Hospital*.—"The fare for the patients and nurses is of the best and on a most liberal scale, and there is no limit to the quantity they may consume. All provisions, including tea, sugar and butter, are supplied free to the Patients, and procured from the local tradespeople by written order from the Matron."

(22) *Bolingbroke Hospital*.—"The average total cost of each In-patient has increased by 8s. 4½d., and of each Out-patient by 1½d., the reason is as follows:

"Provisions.—Increase of £118 owing to higher prices having to be paid for some articles of food.

"Surgery and Dispensary.—Increase of £11, mainly owing to the extra dressings, etc., used for the increased number of Out-patients.

"Domestic.—Increase of £23, spread over 7 of the items included in the detail, while in the other 5 there is a considerable saving. The increase is owing to renewal of furniture, bedding, hardware, etc., etc., which varies from year to year.

"Salaries and Wages.—Increase of £76, owing to increments accruing to nurses and servants, and to extra temporary assistance."

(23) *Charing Cross Hospital, Agar Street, W.C.*—"There was an increase of £300 last year on Provisions, and this is almost entirely accounted for by higher prices, a greater number of Patients, and an addition of two Sisters to the Out-patient Nursing Staff.

"With regard to the high cost per bed generally the Council desire again to point out that this is due to the fact of 5 wards being closed. When a Ward is put out of occupation it does not mean that the expenditure of the Hospital is proportionately reduced. Under certain items, such as Coal, Electricity . . . Expenditure is not affected at all; under certain other items, such as Coal, Electricity . . . it is affected only slightly; while there is hardly any item under which it is affected to the full extent of its cost in the accepted unit of comparison—the occupied bed. It follows that all this unaffected and unreduced expenditure is spread over the beds left in use, increasing the proportion which each bears. So that, while the Hospital reduces its expenditure by closing wards and beds, it at the same time increases the actually cost per occupied bed."

(24) *The Hospital for Women, Soho Square, W.*—"The Hospital was almost entirely closed for Rebuilding during the greater part of 1910.

"The Statistical Tables do not, therefore, bear comparison with others, compiled under normal conditions."

(25) *London Fever Hospital*.—"The cost per bed must necessarily be high in this Hospital, for the following reasons among others:—

"Infectious fevers are not constantly with us; their prevalence comes in waves—sometimes several in the course of a year. At one time there may not be more than 40 or 50 Patients in the Hospital, at another there will be 140 or 150, or even more. Hence for a part of the year many beds are vacant. A non-infectious Hospital usually keeps its beds full all the year round. One of the size of the London Fever Hospital would probably pass 1,500 Patients through its wards in a year, dividing its total cost by that number of Patients.

"We have to be prepared at all times for a rush of Patients, and the standing charges (which include a seasoned Nursing Staff) are always the same. Our numbers of Patients vary from 600 to 800 yearly, which numbers, divided into the total expenditure, would show double the cost per head compared with the non-infectious Hospital quoted above."

(26) *London Homoeopathic Hospital*.—"There are 104 Beds in the Hospital distributed among nine Wards, each with its separate Ward Kitchen, &c. This entails a larger number of skilled Nurses, Porters, and Scrubbers.

"Nursing.—We have no paying Probationers, therefore no 'Fee' to reduce Nursing cost.

"There has to be a larger number of Nurses on the Staff than in Hospitals with Medical Schools. The Nurses of the Hospital do the work (dressings, &c.) done by Students in Hospitals with Medical Schools.

"The Hospital does not employ Ward Maids, the work being done by Scrubbers. The amount is included under Domestic Wages, instead of Nursing, making Domestic Expenses higher.

"The Wages of Scrubbers living out are greater than those paid to Ward Maids living in.

"Domestic Wages.—Include Scrubbers' Wages.

"All male servants are not boarded at the Hospital, but are paid extra wages in lieu of food: therefore Domestic Wages are more, Provisions less.

"Provisions.—The Patients' and Nurses' Fare is of the best and on a most liberal scale, there being no limit to the amount of food they may consume.

"We make no Contracts for a long period, but obtain quotations from several firms, selecting goods of best quality at lowest prices.

"Redecorating and Repairs.—The Hospital was closed from August 1st to September 24th for Repainting and Repairs."

(27) *Metropolitan Hospital*.—"In connection with Provisions, the Committee desire to point out that the Patients are provided with Tea, Butter, and Sugar, and that special food has to be prepared for Jewish Patients, which necessitates the employment of an Extra Cook and expense of an additional Kitchen. All Employees, with the exception of Clerks, Dispensers, and Porters, are boarded at the Hospital.

"Sufficient sleeping accommodation for the Nurses has not yet been provided, and the consequence is that two Wards for 86 Patients on the top floor have to be utilised as Cubicles for the Sisters and Nurses; and additional rooms, outside the Hospital, have to be rented at a cost of £150 10s. per annum.

"There has to be a large proportion of Nurses on the Staff as they do the work (dressings, &c.) generally done by the Students in larger Hospitals. This is much to the advantage of the Nurses; but necessitates the appointment of no less than six residents.

"The nursing of the Patients has been much facilitated by the recent alterations."

(28) *The Miller Hospital for S.-East London*.—"The Board are pleased to be able to point out that, although a large amount of additional work was accomplished in 1910, there was not a corresponding increase in the cost of administration and maintenance. The total sum expended, deducting the cost of the Festival Dinner (£265 11s. 11d.) being only £8 6s. 2d. more than in 1909."

(29) *The New Hospital for Women*.—"The Hospital was closed for five weeks on account of re-organisation and renewal of boilers and hot water system."

(30) *Paddington Green Children's Hospital*.—"In-patient Department.—Re milk. The Medical Committee of this Hospital being of the opinion that the supply of milk for Patients in the wards should continue to be obtained from the Walker-Gordon Laboratories, the extra cost of milk, due to this fact, in 1910 was £95 18s.

"Out-patient Department.—Re cost of each Out-patient attendance.

"The supplies of medicine, surgical dressings, &c., given to Out-patients were as follows:—

"Supply for 7 days	12,501=12,501
" " 14 "	19,818=39,636
" " 21 "	7,046=21,136
" " 28 "	3,849=15,896
	43,214 88,669 weekly supplies.
"Advice and treatment	10,742
"Total attendances as registered	58,956"

(31) *Passmore Edwards Hospital, Wood Green*.—"The Hospital was closed for 150 days during the year 1910 owing to the drains being relaid and later for extension of premises."

(32) *Poplar Hospital*.—"Please note in regard to cost per Out-patient that we do not make any patients coming to the Casualty Department Medical Out-patients. Our Out-patient Department, as distinguished from the Casualty Department, treats Surgical Out-patients only."

(83) *Royal Free Hospital*.—"The item 'Provisions' covers the cost of food for Patients, Nurses, Resident Medical Officers, male and female Servants, Laundry hands, and Staff generally, all of whom are fed during the time they are employed at the Hospital.

"The Hospital provides the In-patients with every necessary article of food, and the washing for the In-patients is done on the premises free of cost to them."

(84) *Royal Hospital for Diseases of the Chest*.—"Surgery and Dispensary.—Under the sub-heading of 'Instruments and Appliances' is included a sum of £85, being the cost of fitting up the new Dental and Pathological Departments with the necessary appliances, etc.

"Salaries and Wages.—A sum of £249 7s. 6d., being the amount of Honoraria paid to the Medical Staff, is included under the sub-heading 'Medical.'

"Beds (80).—Last year each of the 8 Wards was closed for a fortnight for cleaning purposes. This reduced the daily number of available beds from 80 to 76. In addition to this three beds (one in each Ward) are always kept vacant for the reception of Emergency Cases from the Out-patient Department, which further reduced the number to 73."

(85) *Royal National Orthopaedic Hospital*.—"Owing to the fourth floor of the Hospital being unoccupied, the cost per bed appears higher than will be the case when the whole Hospital is occupied."

(86) *Royal Waterloo Hospital for Children and Women*.—"As the result of a special effort to economise the average cost of each In-patient per week has been reduced from £1 9s. 3d. to £1 3s. 2d., and the average cost of each Out-patient attendance from 1s. 0⁶/₇d. to 9⁹/₁₆d.

"The number of letters which we have received from grateful patients will testify that this saving has not been effected at the cost of their general welfare."

(87) *Seamen's Hospital, Greenwich*.—"Dreadnought Hospital.—The cost per In-patient per week, the cost per bed and the cost per Out-patient attendance are all prejudicially affected by a general upward tendency in market prices. Space will not allow of detailed explanation of this increase, but it has been brought about by circumstances beyond the control of the Management. As an example, it may be mentioned that the increased price of rubber has affected "Surgery and Dispensary," "Domestic," and "Establishment" by sending up the price of all rubber goods.

"In addition, the above figures are all prejudicially affected by the fact that the numbers of Patients treated were much higher at the end of the year when prices were highest than they were at the beginning of the year when prices were lower. The first quarter of the year when the number of patients treated was about the same as the number in the previous year showed a reduction in expenditure, but the subsequent increase of prices added to the largely increased number of patients more than swallowed up this saving in expenditure.

"Although the number of new Out-patients is less than in the previous year, the number of attendances is greater, with the result that the cost per Out-patient has risen from 1s. 7¹/₂d. to almost 2s. 1¹/₂d. The increased number of attendances arises from the fact that it has been found necessary to treat a larger proportion of the Out-patients for a lengthy period, exceeding in some instances three weeks, than in the previous year.

"When it is borne in mind that in spite of the facts mentioned above, the statistical tables show a decrease in the cost per In-patient, it will be seen that under more favourable conditions a considerable decrease would have been shown and considerable economy would have been effected."

(88) *Seamen's Hospital, Royal Albert Dock*.—"The cost per In-patient per week, the cost per Bed, and cost per Out-patient attendance are all prejudicially affected by a general increase in market prices as explained in note (87) dealing with the *Dreadnought Hospital*."

STATISTICAL REPORT

ON THE

ORDINARY EXPENDITURE

OF

ONE HUNDRED AND SEVEN LONDON HOSPITALS

FOR THE YEAR

1911

JULY, 1912

LONDON

PRINTED AND PUBLISHED FOR KING EDWARD'S HOSPITAL FUND FOR LONDON
BY SPOTTISWOODE & CO. LTD., 5 NEW-STREET SQUARE, E.C.

COPYRIGHT

The following is a list of the Hospitals which have been included in the Report, and the number of beds in each, as shown in the Returns made to the Fund.

To HIS HIGHNESS THE DUKE OF TECK, G.C.B., G.C.V.O., THE
 VISCOUNT IVEAGH, K.P., AND THE SPEAKER OF THE
 HOUSE OF COMMONS, *Governors of King Edward's
 Hospital Fund for London.*

SIRS,

We have the honour to submit the Ninth Annual Statistical Report, prepared by Mr. Maynard from the published accounts of one hundred and seven London Hospitals and from Returns made to the Fund.

These Hospitals consist of :—

- 17 General Hospitals which had an average of over 100 beds in daily occupation during 1911.
- 15 General Hospitals which had an average of under 100 beds in daily occupation during 1911.
- 4 Consumption Hospitals.
- 5 Hospitals for Women.
- 6 Hospitals for Children.
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 12 Cottage Hospitals.
- 8 Lying-in Hospitals.
- 32 Unclassified Hospitals.

107

The Report deals with nearly all the Hospitals of London.

We regret to note that in 1911 there have been increases in the cost per bed occupied and per attendance of Out-patients at the Hospitals whose accounts and statistics have been dealt with, which represent an addition to the cost of about £9,600. This must be set off against economies achieved by the Hospitals since the first issue of these Reports in 1904 amounting to about £47,000 per annum.

The Report discusses some of the factors that may have tended to raise the cost, but does not attempt to decide to what extent the present result may be attributed to any particular cause.

We have no doubt that the Managers of the Hospitals will give full consideration to the various alternatives with a view to avoiding any preventable increase.

We have the honour to be, Sirs,

Your obedient servants,

SAVILE CROSSLEY,
JOHN G. GRIFFITHS,

Honorary Secretaries.

July 29, 1912.

NOTES.

SUPPLEMENT.

(Privately circulated for the use of Hospital Officials only.)

Lowest prices being paid on December 31, 1911, in each of one hundred and eight Hospitals for forty-six different articles.

PREFATORY NOTE.

The Statistical Report deals^j this year with the expenditure of 107 institutions, being very nearly all the hospitals which apply for grants from the Fund.*

The first section of the Report consists of a series of tables giving, in alphabetical order, the general statistical particulars, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year) for all the institutions. This introductory section now forms in itself a very nearly complete statistical record of these figures for all the hospitals of London which observe the Revised Uniform System of Accounts.†

The expenditure of such of the hospitals as can conveniently be arranged in groups is analysed in detail in subsequent sections of the Report by means of comparisons with the average of the group. In case the juxtaposition of dissimilar hospitals in the general alphabetical table of cost per bed and per attendance should otherwise suggest misleading comparisons, footnote references to the group tables which follow have been added. This general table‡ thus incidentally serves as an index to the groups.

The exclusion from the annual comparisons of cost per bed and per out-patient attendance of the items not readily controllable from year to year, viz: Repairs and other Establishment charges, Official Salaries and Pensions, Finance, and Rent, Rates and Taxes, has been continued. Tables including the three former can be found in the published annual reports of the individual hospitals. It will therefore be borne in mind that wherever in these tables, a total or average cost per bed or per out-patient attendance is stated, the figure is exclusive of the above mentioned charges.

The final table of each group is arranged in the same way as in the statistics of the last few years. The last column but one gives the amount by which the expenditure at each hospital is greater or less than it would be if the hospital had been worked at the average cost per bed and per out-patient attendance for its group. In the last column this amount is expressed as a percentage of the total expenditure of the hospital in question, and the excessive influence of the size of the institution on its position in the final list is thus eliminated.

A list of the Hospitals in order of cost has been prepared as a supplement for circulation to the hospitals concerned.

In drawing conclusions from any of the tables it must, however, be borne in mind that they profess to give only the material for a comparison

* See note 19 on page 105. † See note 20 on page 105. ‡ Pages 26 to 31.

of outlay, and the question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. In all the tables, it should be noted, it is the average that is taken as the basis of comparison, and there is no suggestion that the lowest is put forward as a model for imitation.

For a comparison between 1910 and 1911 the following table gives the necessary particulars, and it will be seen that, taking ninety-six Hospitals* together, out of the one hundred and six dealt with in last year's Report, there is an increase in cost representing a sum of about £9,600.

HOSPITALS	Beds occupied	Average cost per Bed	Out-Patient Attendances	Average cost per Attendance	Total value of differences in cost		Net difference	
					In-Patients	Out-Patients		
		£ s. d.		Pence	£	£	£	
15 Larger General*	1910	4,106	78 14 11	2,645,613	6-86	+ 2,326	+ 2,047	+ 4,873
	1911	4,109	79 6 2	2,676,777	7-04			
13 Smaller General*	1910	622	73 7 10	563,546	5-37	+ 148	- 471	- 323

	1911	218	65 17 9	99,656	8-82			
80 Unclassified*						+ 1,121	- 260	+ 861
				Net Totals		+ 7,053	+ 2,577	+ 9,680

* Besides the Hospitals excluded for various reasons from the averages for 1910 and 1911 and consequently from the above comparisons, the *Florence Nightingale Hospital for Gentlewomen* and the *Kensington and Fulham General Hospital* have been omitted from the Unclassified Hospitals on account of their figures for 1910 not being comparable with those for 1911. Cases of temporary reduction in the number of beds, if on a small scale or for a short period, have not been omitted, as it is probable that, taking a large number of Hospitals together, these would be distributed fairly evenly as between one year and another.

Particulars of the changes in the number of occupied beds and of out-patient attendances have been added, so that the influence of this element on changes in cost may be allowed for. The question of the bearing of changes in the number of beds (which, if permanent, may frequently be both a result and a cause of changes in cost per bed) was dealt with in the prefatory note to the Report for 1906. The cost per out-patient attendance is doubtless particularly liable to fluctuations through accidental changes in the numbers dealt with. Various methods of testing the importance of these factors in any given case were discussed in the Report for 1909.

This is the first time since its original publication in 1903 that the Statistical Report has failed to show a decrease in expenditure. The previous savings, which taken together amounted to about £47,000 a year, are reduced by the present increase to about £37,400.

It is not the object of these Reports to discuss the causes of changes in Hospital expenditure, but only to submit the figures for the consideration of those concerned. But it may not be out of place to mention three factors which (apart from the effect of changes in the number of beds or attendances) might be concerned in producing an increase in average expenditure.

In the first place, there is the continual tendency towards an increase in the number of special and costly treatments, resulting from the developments of modern medical science. The effect of this form of increased expenditure might be masked for a time by greater attention to economy of management, but as soon as the maximum saving possible from such economy was attained, the effect of new and expensive treatments would begin to show in increased cost per bed.

In the second place, the rise of prices, referred to in the Reports for 1909 and 1910, has continued. Here, again, the previous reductions of cost have been achieved in the face of a factor tending in the other direction, and as the scope for further economies grows narrower the effects of this factor may show themselves in a positive increase in expenditure.

In the third place, there is the danger lest success in the achievement of economies may lead to a slight slackening of the constant

effort needed for their maintenance. So long as the present excesses above the average still exist in the various groups the possibility of still further economy cannot be ignored.

It is important therefore that the authorities of the various hospitals whose cost has increased should take steps to ascertain whether the increase is unavoidable or whether it is due to preventable causes. This is particularly the case with those whose cost per bed or per out-patient attendance is above the average of similar hospitals.

As a first step in this direction the following further analysis of expenditure in the groups which show the largest increases may be useful:—

LARGER GENERAL HOSPITALS.

Sub-head	Cost per Bed			Cost per Out-Patient Attendance		
	1910	1911	Difference	1910	1911	Difference
	£ s. d.	£ s. d.	s. d.	Pence	Pence	Pence
Provisions	23 13 6	23 15 4	+1 10	·77	·75	—·02
Surgery and Dispensary	7 9 8	7 14 3	+4 7	2·29	2·28	—·06
Domestic	20 1 10	19 19 3	—2 7	·96	1·02	+·06
Salaries and Wages (Maintenance)	26 14 1	27 1 4	+7 3	2·81	3·00	+·19
Other Management	0 15 10	0 16 0	+0 2	·03	·04	+·01
Total	78 14 11	79 6 2	+11 3	6·86	7·04	+·18
<i>Number of Beds and Attendances</i>	4,106	4,109		2,645,613	2,676,777	

CHILDREN'S HOSPITALS.

Sub-head	Cost per Bed			Cost per Out-Patient Attendance		
	1910	1911	Difference	1910	1911	Difference
	£ s. d.	£ s. d.	£ s. d.	Pence	Pence	Pence
Provisions	15 7 4	16 7 5	+1 0 1	·60	·62	+·12
Surgery and Dispensary	6 5 4	7 0 8	+0 15 4	1·55	1·75	+·20

<i>Number of Beds and Attendances</i>	543	542		348,865	302,666	

This shows that in the case of the larger General Hospitals the greatest increases in average cost per bed occur under the sub-heads of Surgery and Dispensary and Salaries and Wages (Maintenance). It may be noted that several hospitals draw special attention to rises in the prices of drugs, and that the tendency of the item Salaries and Wages to appear as an exception to the general reduction of cost has been remarked upon in previous Reports on more than one occasion. In the case of the Children's Hospitals the increase in average cost is much heavier and more generally distributed over the different items of expenditure.*

Comparisons between one hospital and another within each group—which can easily be made from the detailed tables—would show which hospitals have contributed most to the increase in the average, and which hospitals have continued to achieve reductions of cost. Such comparisons would thus help to show how far the change is due to causes common to all hospitals and how far to the circumstances of particular institutions—circumstances which may sometimes be quite exceptional. This further analysis is however not practicable in a general report and must be left to those directly concerned. The object of this Report is to render the material, supplied at considerable expenditure of time and trouble by the officials of each hospital, available for the assistance of all in their efforts for economy.

H. R. MAYNARD, *Secretary.*

July 29, 1912.

* The unweighted average of the lowest prices paid at 17 larger General Hospitals for 9 different drugs paid on or last before December 31, 1911, shows an increase over the corresponding average for 1910 amounting to 7·23 per cent. A similar comparison in the prices of provisions, based on 18 different articles, shows a decrease of 34 per cent. This may be compared with the changes in the prices of provisions shown by the Board of Trade Index Number, viz. an increase of 2·39 per cent. in wholesale prices and a decrease of 65 per cent. in retail. It is worth noting, however, that there was a marked rise in the price of milk, and that of the increase of £1 0s. 1d. in the cost per bed for provisions in the Children's Hospitals this sub-head alone accounts for 12s. 8d.

Cod Liver Oil per gallon	0 11 0	0 2 2			

NOTE.—The circumstances under which goods are purchased, the quantities and qualities, the date and length of contract, and conditions of delivery would have to be taken into consideration before assuming that the lowest prices paid by a single Hospital in any year were obtainable by every institution.

It must be remembered also that throughout the Statistical Report the comparisons are based on the average and not on the minimum.

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

Where no entry appears the Hospitals are unable to divide their beds under these headings. The *West Ham* takes in a few urgent Medical cases when accommodation permits.

The *Royal London Ophthalmic* returns the number of beds as 188, 20 being empty.

(2) In the case of *St. Thomas's Hospital* the 38 paying beds, although included in the total number of beds in the Hospital, namely 620, are not included in the average number of beds in daily occupation, namely 511. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them.

(3) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and others is based on figures supplied by the Hospitals; but the varying proportions of Casualties to others suggest that the definition of a casualty differs in different Hospitals.

(4) The *Passmore Edwards Cottage Hospital*, Willesden, the *Passmore Edwards Cottage Hospital*, Wood Green, the *South Wimbledon Cottage Hospital*, and the *Wimbledon Cottage Hospital*, although having no general Out-Patients' Department, treat a small number of casualties, the cost of these cases being included in that of the In-patients.

(5) The *German Hospital*, having been closed during a great part of the year for structural alterations and repairs, and the number of occupied beds having consequently been considerably reduced, the figures for this hospital have been excluded from the various Tables of Group I.

(6) For similar reasons the figures of the *Paddington Green Children's Hospital* and the *Wimbledon Cottage Hospital* have also been excluded from the Tables of their respective groups, viz. V. and VIII.

(7) The cost per bed and per Out-Patient attendance at *St. George's Hospital* have not been taken into account in calculating the various averages of Group I.

(8) *Consumption Hospitals*:—The figures relating to the Country Branches of the *Hospital for Consumption* and the *Mount Vernon Hospital for Consumption* are not included in this Report.

(9) *Lying-in-Hospitals*:—The figures relating to the Training Schools of the various hospitals in this group are not included in this Report.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of *St. Vincent de Paul*. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages in Group II, Table IV.

(11) The *Passmore Edwards Cottage Hospital*, Acton, includes £226. 11s. cost of District Nursing Institution, Invalid Kitchen, and Dispensary, in the Income and Expenditure Account, making the necessary deductions from the Statistical Tables of In-Patients and Out-Patients upon which the various Tables in this Report are based. This amount is not included in this Report.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 15 and 20 below).

(13) *Provisions.*—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. The nurses, however, in some cases return to the wards after taking private cases, and during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic.*—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," "Establishment Charges," and "Rent, Rates and Taxes," as shown in the washing returns published by these hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. (See Section III. for comparison of cost of washing taken by itself, including the charges for depreciation and interest.)

(15) *Establishment and Salaries and Wages.*—Comparisons of cost in the separate Tables I. to V., and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences in the separate tables cancel one another in the general Table VI.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses.*—Tables V. of each Group show the Total Management Expenses divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain hospitals the patients are required, unless too poor, to provide certain articles of food. These are as follows: *London Homœopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *Middlesex*, tea and sugar; *University College*, tea and sugar.

(18) The totals and general averages corresponding to the columns marked (a) in Section I., Table I., for the different groups of Hospitals, excluding those Hospitals that have been omitted for various reasons, are as follows:—

Group	Beds		Average number of days each patient was resident	Total new Out-patients	Total Attendances	Average number of Attendances per Out-patient
	Total	Average number in daily occupation				
I. Larger General ...	5,013	4,403.55	23.21	914,499	2,805,185	3.07

(19) The issue of these Reports was begun by Mr. J. Danvers Power with the figures of 16 Hospitals for 1903. But the earlier ones contained confidential matter, and the first Report published was that for 1908. A discussion of the objects and principles of the Reports may be found in the Prefatory Note to the latter.

(20) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a pamphlet issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 28 Fumival Street, Holborn, E.C. (2nd edition, February, 1909, price 1s. 3d. post free, with Supplement, July, 1912, price 6d.). The System was drawn up by the three Funds after reports on the subject by Mr. John G. Griffiths, F.C.A., and a committee of Hospital Secretaries.

NOTES PRINTED IN COURTESY TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE
KINDLY SUPPLIED.

(21) *Belgrave Hospital for Children*.—"The Committee have decided to open 8 more beds on July 1st, increasing the number of beds available for Patients from 24 to 32."

(22) *Blackheath and Charlton Cottage Hospital*.—"The fare of the Patients and Nurses is of the best and on a most liberal scale, and there is no limit to the quantity they may consume. All provisions, including tea, sugar and butter, are supplied free to the Patients, and procured from the local tradespeople by written order from the Matron."

(23) *Bolingbroke Hospital*.—"The average total cost of each In-patient has been reduced by 8s. 4d., and of each Out-patient by 0½d."

"There is a decrease in the cost of nearly all the In-patient items."

"Steps are being taken to obtain future supplies of Stores by contract, and it is anticipated that the cost per Patient will be still further decreased."

(24) *Chelsea Hospital for Women*.—"The cost per In-patient increased unavoidably in 1911 owing to the total closing of the Hospital in August for re-painting and other repairs."

(25) *Clapham Maternity Hospital*.—"I have no remark to make except that it is fair to Maternity Hospitals to bear in mind that 'a bed' (with them) means really *two* Patients—not one, as in other hospitals—as the baby is 'a patient' as well as its mother, and gives quite as much trouble and expense, even when the hospital does not adopt the modern plan of a cradle as well as a 'bed.'"

(26) *Finchley Cottage Hospital*.—"The total expenditure this year is in excess of that last year, although the number of Patients treated has been approximately the same. This has arisen from the fact that on the whole the cases treated have been more serious, needing a longer stay in the Hospital, hence the increase in expenditure under the heading of Provisions (also due to higher prices) and Surgery and Dispensary. On many occasions during the year the Hospital was full and patients were awaiting admission. As will be seen from the Statistical Tables, the average cost per Patient per week has considerably declined from the figure last year."

(27) *General Lying-in Hospital*.—"It has not been found possible to reduce the cost per Patient owing to the increased cost of Provisions and other items. Also the Pound Day could not be held during 1911, which usually secures a large amount of groceries, etc."

(28) *Great Northern Central Hospital*.—"There was an increase in the number of occupied beds from 152 in 1910 to 163 in 1911, and a reduction of 2s. 6d. in the weekly cost per In-patient."

"There is a slight increase in the number of Out-patients and one of 2,252 in their attendances."

"During the year the Committee have carefully examined the organisation of the spending department of the Hospital, and have found it possible to effect certain economies, the full effect of which will not be apparent, however, until the end of the current year. The chief concern of the Committee at present is the growing expenditure connected with the X-Ray and Pathological Departments. As regards the former, owing to the extraordinary growth of the demand for electrical treatment, further substantial expenditure will be necessary for apparatus and maintenance purposes in the near future. In the Pathological Department an addition is now being made to the accommodation, involving an expenditure of some £380, the old apartments, at present being used for this purpose, being thrown into the Pathological Laboratory. The expenditure for instruments, drugs, and apparatus in this department is rising rapidly. At the request of the Medical Committee the appointment of Director of Clinical Pathology has been created, and the Pathologist was appointed to the post."

(29) *Kensington and Fulham General Hospital*.—"Statistical Tables.—Owing to the disproportion of beds to the work of the Out-patients' department, it has been impossible to keep separate accounts, but an honest attempt has been made to apportion the cost."

"Cost per bed.—The reduced cost is due to the increased average of beds daily occupied."

"Cost per Out-patient attendance.—The reduced cost is due to increased numbers treated, and the expenses of management being practically the same as in previous years."

(30) *Leyton, Walthamstow and Wanstead Children's and General Hospital*.—"Washing Return.—The cost cannot be divided exactly between In- and Out-patients. No rent is paid for the hospital laundry, and soda is given, so these items do not appear in Expenditure Account. The only washing in connection with the Out-patient department is for towels and dusters."

"Washing off Hospital premises includes the House Surgeon's linen, Matrons' and Nurses' aprons, collars, etc., and occasionally sheets, etc."

(31) *London Fever Hospital*.—"The cost per bed must necessarily be high in this Hospital for the following reasons among others:—

"Infectious fevers are not constantly with us—their prevalence comes in waves—sometimes several in the course of a year. At one time there may not be more than 40 or 50 Patients in the Hospital, at another there will be 140 or 150 or even more. Hence for a part of the year many beds are vacant. A non-infectious hospital usually keeps its beds full all the year round. One of the size of the London Fever Hospital would probably pass 1,500 patients through its wards in a year, dividing its total cost by that number of patients."

"We have to be prepared at all times for a rush of Patients, and the standing charges (which include a seasoned nursing staff) are always the same. Our number of Patients vary from 600 to 800 yearly, which number, divided into the total expenditure, would show double the cost per head compared with the non-infectious hospital quoted above."

(32) *London Homoeopathic Hospital*.—"With the opening of the New Wing in October, 1911, the number of beds is increased to 165. This entails a larger number of skilled Nurses Porters, and Scrubbers, etc."

"Nursing.—We have no paying probationers, therefore no 'Fee' to reduce nursing cost."

"There has to be a larger number of Nurses on the Staff than in Hospitals with Medical Schools. The Nurses of the Hospital do the work (dressings, etc.) done by Students in Hospitals with Medical Schools."

"The Hospital does not employ Ward Maids, the work being done by Scrubbers. The amount is included under Domestic Wages, instead of Nursing, making Domestic Expenses higher."

"Domestic Wages.—Include Scrubbers' Wages."

"All the male servants are not boarded at the Hospital, but are paid extra wages in lieu of food: therefore Domestic Wages are more, Provisions less."

"Provisions.—The Patients' and Nurses' fare is of the best and on a most liberal scale, there being no limit to the amount of food they may consume."

(33) *Metropolitan Hospital*.—"In connection with Provisions, the Committee desire to point out that the Patients are provided with Tea, Butter, and Sugar, and that special food has to be prepared for Jewish Patients, which necessitates the employment of an Extra Cook and expense of an additional Kitchen. All Employees, with the exception of Clerks, Dispensers, and Porters, are boarded at the Hospital."

"In order to provide sufficient sleeping accommodation for the Sisters and Nurses, two Wards (for 36 Patients) on the 5th floor are arranged as Cubicles; and additional rooms, outside the Hospital, are rented at a cost of £156 per annum. An adequate Nurses' Home is much required; but the leases of most of the houses on the hospital site will not expire until Michaelmas, 1918."

"Teaching is confined to the Nurses at this Hospital, and the proportion of Nurses on the Staff is large, but Nurses do the work, dressings, etc., usually done by Students in the Hospitals with Medical Schools attached. This is much to the advantage of the Nurses; but necessitates the appointment of not less than six residents."

(34) *Middlesex Hospital*.—"The average cost per bed is abnormally high, owing to the fact that a certain number of beds were closed, whilst works of repair, cleaning, painting, etc., were in progress."

(35) *Miller General Hospital for S.-E. London*.—"The Board are pleased to be able to point out that, although a large amount of additional work was accomplished in 1911, there has been a decrease in the expenditure."

(36) *Poplar Hospital*.—"In regard to the cost of Out-patients, we do not make any Patients coming to the Casualty Department *Medical* Out-patients. Our Out-patient Department, as distinguished from the Casualty Department, treats *Surgical* Out-patients only."

(37) *Prince of Wales's General Hospital, Tottenham*.—"The cost of maintenance is slightly increased this year owing to the general rise in prices of food, dressings, and drugs. Also the Medical salaries are higher owing to the difficulty experienced in obtaining Resident Medical Officers, and several of the posts have been filled by Locums throughout the year."

(38) *Royal Free Hospital*.—"The average cost per Out-patient attendance should be regarded as lower than that shown in the statistical tables by reason of the system hitherto adopted at this Hospital in enumerating the attendances of Old Casualty Patients."

(39) *Royal Hospital for Diseases of the Chest*.—"Salaries and Wages.—Under the sub-heading 'Medical' is included a sum of £275 2s., being the amount of Honoraria paid to the members of the Medical Staff.

"Beds (80).—Last year each of the three Wards was closed for a fortnight for cleaning purposes. This reduced the daily number of available beds from 80 to 76. In addition to this three beds (one in each Ward) were kept vacant daily for the reception of 'Emergency' Cases sent from the Out-patient Department, which further reduced the daily number of beds available to 73."

(40) *Royal National Orthopaedic Hospital*.—"The Wards on the fourth floor are at present vacant, and the cost per bed appears higher than will be the case when the whole Hospital is occupied. The Committee hope to open the Wards during the present year."

(41) *Royal Waterloo Hospital for Children and Women*.—"The increase in the cost of In-patients for 1911 is principally due to the scarcity of milk last year, and to the greater number of operations performed, which numbered only 1,252 in 1910 against 1,580 in 1911."

(42) *St. George's Hospital*.—"Strict supervision has been exercised over the expenditure of each Department compatible with the proper treatment of the Patients.

"All provisions, including tea, sugar, and butter, are supplied to the Patients quite free.

"When Patients are unable to get their personal washing done, the Hospital has it done for them."

(43) *Santa Claus Home*.—"The increase in the average total cost of each In-patient is due to the fact that the Home was closed for 52 days in 1911 owing to necessary repairs."

(44) *Seamen's Hospital (Dreadnought)*.—"The total expenditure of the Dreadnought Hospital has fallen from £18,204 5s. 6d. to £17,774 8s. 6d., shewing a saving of £430 2s. effected in face of considerable increases in the total number of new In-patients treated, and the number of beds occupied daily, and in face of the continued increase of prices generally.

"The average cost per bed has been reduced in Domestic, Salaries, Wages, etc., Management. The cost has increased in the following cases: Provisions, and Surgery and Dispensary. This is due to increases of prices, the greatest increase being in the cost of milk due to the dry summer.

"The cost per Out-patient attendance has risen, the increase being spread evenly over Provisions, Surgery and Dispensary, and Salaries, Wages, etc. The increases in Provisions and Salaries, Wages, etc., are due to the fact that the number of Out-patient attendances decreased largely, while it was not possible to make a corresponding reduction in the number of officials, part or all of whose time is occupied in Out-patient work. The increase in the cost of Surgery and Dispensary is due to the increase in the cost of drugs. The average total cost of each Out-patient has increased owing to the same reasons."

(45) *Seamen's Hospital (Royal Victoria and Albert Docks)*.—"The cost per bed, total cost per In-patient, cost per Out-patient attendance, and average total cost per Out-patient are all adversely affected by a general rise of prices, notably in the case of Provisions, as explained in the note dealing with the *Dreadnought Hospital*. A further factor in the increase in cost per In-patient per week, and total cost of each In-patient is the decrease in the number of Patients treated.

"On the other hand the cost per Out-patient attendance has been reduced. This is largely due to the increase in the number of attendances, which did not necessitate a corresponding increase in the fixed charges of the Out-patient department."

(46) *West End Hospital for Diseases of the Nervous System*.—"Surgery and Dispensary.—On an average each Medical Patient attended once in three weeks, but each time received three weeks' Medicine. The average cost under this head should, therefore, strictly speaking, be divided to make it correspond with the other headings in this department.

"The Management also desires to call attention to the substantial decrease in the cost per bed."

To HIS HIGHNESS THE DUKE OF TECK, G.C.B., G.C.V.O., THE
 VISCOUNT IVEAGH, K.P., AND THE SPEAKER OF THE
 HOUSE OF COMMONS, *Governors of King Edward's
 Hospital Fund for London.*

SIRS,

We have the honour to submit the Tenth Annual
 Statistical Report, prepared by Mr. Maynard from the published
 accounts of one hundred and nine London Hospitals and from
 Returns made to the Fund.

These Hospitals consist of:—

- 19 General Hospitals which had an average of over 100 beds in
 daily occupation during 1912.
- 14 General Hospitals which had an average of under 100 beds in
 daily occupation during 1912.
- 4 Consumption Hospitals.
- 5 Hospitals for Women.
- 6 Hospitals for Children.
- 5 Ophthalmic Hospitals.
- 3 Hospitals for Epilepsy and Paralysis.
- 13 Cottage Hospitals.
- 8 Lying-in Hospitals.
- 32 Unclassified Hospitals.

NOTES 103

SUPPLEMENTS.

(Privately circulated for the use of Hospital Officials only.)

1. Lowest prices being paid on December 31, 1912, in each of one hundred and eight Hospitals for forty-six different articles. (Circulated in February, 1913.)
2. Hospitals in order of cost, 1912.

PREFATORY NOTE.

THE Statistical Report deals this year with the expenditure of 109 institutions, being very nearly all the hospitals which apply for grants from the Fund.*

The first section of the Report consists of a series of tables giving, in alphabetical order, the general statistical particulars, total expenditure, and cost per occupied bed and per out-patient attendance (in respect of the items controllable from year to year) for all the institutions. This introductory section now forms in itself a very nearly complete statistical record of these figures for all the hospitals of London which observe the Revised Uniform System of Accounts.†

The expenditure of such of the hospitals as can conveniently be arranged in groups is analysed in detail in subsequent sections of the Report and is compared with the average of the group. In case the juxtaposition of dissimilar hospitals in the general alphabetical table of cost per bed and per attendance should otherwise suggest misleading comparisons, footnote references to the group tables which follow have been added. This general table‡ thus incidentally serves as an index to the groups.

As the object of these Reports is to compare that part of the Annual expenditure which is under the control of the Hospital from year to year, various items are excluded, sometimes because they are liable to wide and unavoidable variations as between one year and another or between one Hospital and another, sometimes because they cannot readily be modified by the Hospital Committee. These include the following, viz.: Repairs and other Establishment Charges, Official Salaries and Pensions, Finance, and Rent, Rates and Taxes.§ It will therefore be borne in mind that wherever in this Report a total or average cost per bed or per out-patient attendance is stated, the figure is exclusive of the above mentioned charges, and that variations in the figures cannot be explained by reference to variations in these items.

The final table of each group compares the total cost as thus defined, both for the in-patient and out-patient departments separately and for the two together. The last column but one gives the amount by which the expenditure at each hospital is greater or less than it would be if the hospital had been worked at the average cost per bed and per out-patient attendance for its group. In the last column this amount is expressed as a percentage of the total expenditure of the hospital in question, and the excessive influence of the size of the institution on its position in the final list is thus eliminated.

A list of the Hospitals in order of cost per occupied bed, cost per out-patient attendance, and cost of the two departments combined, has been prepared as a supplement for circulation to the hospitals concerned, and for the use of the Council and Committees of the Fund.

In drawing conclusions from any of the tables it must, however, be borne in mind that they profess to give only the material for a comparison

* See note 19 on page 105.

† See note 20 on page 105.

‡ Pages 26 to 31.

§ Tables containing all the expenditure except Rent, Rates and Taxes can be found in the published Annual Reports of the individual hospitals.

of outlay, and the question in each case remains, how far a given cost above the average is justifiable, or whether a given cost below the average is attained at a sacrifice of some element of full efficiency. In all the tables, it should be noted, it is the average that is taken as the basis of comparison, and there is no suggestion that the lowest is put forward as a model for imitation.

The following table gives the necessary particulars for a comparison between 1911 and 1912, and it will be seen that, taking one hundred and two Hospitals* together, out of the one hundred and seven dealt with in last year's Report, there is an increase in cost representing a sum of about £21,800.

HOSPITALS	Beds occupied	Average cost per Bed	Out-Patient Attendances	Average cost per Attendance	Total value of differences in cost		Net difference	
					In-Patients	Out-Patients		
					£	£

				Net Totals		+15,700	+6,127	+21,827

Particulars of the changes in the number of occupied beds and of out-patient attendances have as usual been added, so that the influence of this

* Besides the Hospitals excluded for various reasons from the averages for 1911 and 1912 and consequently from the above comparisons, the *London Lock (Male) Hospital* has been omitted from the Un-classified Hospitals on account of their figures for 1912 not being comparable with those for 1911. Cases of temporary reduction in the number of beds, if on a small scale or for a short period, have not been omitted, as it is probable that, taking a large number of Hospitals together, these would be distributed fairly evenly as between one year and another.

element on changes in cost may be allowed for. The question of the bearing of changes in the number of beds (which, if permanent, may frequently be both a result and a cause of changes in cost per bed) was dealt with in the prefatory note to the Report for 1906. The cost per out-patient attendance is doubtless particularly liable to fluctuations through accidental changes in the numbers dealt with. Various methods of testing the importance of these factors in any given case were discussed in the Report for 1909.

It is, of course, a matter for regret that the Statistical Report has again to record, instead of the decreases in cost which were the unbroken rule between 1903 and 1910, an increase in nearly every group. But it must not be too hastily assumed that this increase necessarily implies any diminution in the attention devoted by the Hospitals to economy, or that it nullifies the benefit derived from the previous reductions, which amounted to about £47,000 a year.

For there are two factors which tend at the present time to increase the cost of Hospital maintenance, apart altogether from questions affecting economy of management. One is the continual increase in the number of special and costly treatments: the other is the rise in prices.* The savings noted in the earlier Reports were achieved in the face of these opposing tendencies; and it is quite possible that had it not been for the reductions in the past, and the habit of economy thus fostered, the present increases, or even larger increases, might have been added to the original cost, and the present level of expenditure might have been £47,000 per annum higher than it is.

At the same time it is necessary to remember that some slackening of effort might result from past success in the achievement of economies, or from the discouragement that comes when efforts at reduction are out-paced by factors beyond the control of the management. It should also be borne in mind that while the factors in question may be responsible for a rise in average cost, they do not necessarily explain the increase at any particular Hospital, or the extent to which at some Hospitals the cost exceeds the average of the group of comparable institutions.

As some assistance to Hospital Managers and others interested in comparing the cost at any particular Hospital with the average cost, the following table has been prepared, analysing the increases in each group, both for cost per bed and for cost per out-patient attendance. Similar figures for any individual hospital can readily be obtained from Table III. on pages 26 to 31, in comparison with the corresponding Table in last year's Report, and provision is made for the insertion of such figures in manuscript.

* The figures at present available for a general comparison of Hospital prices are very far from adequate, but the following may be useful, especially in conjunction with the table on page 12 showing the changes in cost in the departments of Provisions and Surgery and Dispensary.

With regard to Provisions, the unweighted average of the lowest prices paid in 1912 at 17 Larger General Hospitals for 18 different articles of food and drink, which in 1911 showed a decrease as compared with 1910 of .34 per cent., rose in 1912 by 2.97 per cent. This may be compared with the changes in the prices of Provisions shown by the Board of Trade Index Number, viz: an increase in wholesale prices between 1910 and 1911 of 2.39 per cent. and between 1911 and 1912 of 7.53 per cent. (the total increase since 1903, when the King's Fund Statistical Reports were begun, being 19.17 per cent.). These changes in wholesale prices were accompanied by a decrease in retail prices in 1911 of .55 per cent. and an increase in 1912 of 5.12 per cent. (the increase since 1903 being 11.34 per cent.)

With regard to Surgery and Dispensary, the unweighted average of the lowest prices paid at the Larger General Hospitals for 9 different drugs, which in 1911 showed a rise of 7.23 per cent. over 1910, increased in 1912 by a further .24 per cent.

* These lines are provided for the insertion in manuscript of the corresponding figures relating to any Hospital the cost of which the reader desires to analyse, and the relevant figures have been inserted in the copies sent to the several Hospitals applying for grants from the Fund. Attention is again called to the fact that these figures do not include Repairs, which are specially liable to unavoidable variations between one year and another and between one Hospital and another.

† The increase under the heading Provisions at the Consumption Hospitals is due to the fact that the cost of board of officers employed in the out-patient department has been transferred to that heading from Salaries and Wages, which would otherwise show an increase of 45s.

It will be observed that this year the greatest average increases in cost per bed occur under the sub-heads of Provisions at the Larger General Hospitals, Surgery and Dispensary and Salaries and Wages at the Hospitals for Women, and Provisions and Salaries and Wages at the Cottage Hospitals. The increases in Surgery and Dispensary at the Larger General and Smaller General Hospitals are also large in proportion to the total cost of that department. In cost per out-patient attendance the greatest increases appear under Salaries and Wages at the Larger General, Consumption † and Lying-in-Hospitals, and Surgery and Dispensary at the Children's Hospitals.

Further analysis must be left to those directly concerned. The object of this Report is to render the material, supplied at considerable expenditure of time and trouble by the officials of each hospital, available for the assistance of all in their efforts for economy.

H. R. MAYNARD,
Secretary.

August 5, 1913.

NOTE.—The circumstances under which goods are purchased, the quantities and qualities, the date and length of contract, and conditions of delivery would have to be taken into consideration before assuming that the lowest prices paid by a single Hospital in any year were obtainable by every institution.

It must be remembered also that throughout the Statistical Report the comparisons are based on the average and not on the minimum.

SECTION V.

NOTES.

(1) It will be seen that the total number of beds set apart for Medical and Surgical cases respectively differ. The difference in numbers between different classes of beds is of some importance in considering the average expenditure per bed.

Where no entry appears the Hospitals are unable to divide their beds under these headings.

The Royal London Ophthalmic returns the number of beds as 138, 20 being empty.

(2) In the case of *St. Thomas's Hospital* the 88 paying beds, although included in the total number of beds in the Hospital, namely 680, are not included in the average number of beds in daily occupation, namely 532. Separate accounts are kept for these paying beds, which are in a part of the Hospital known as *St. Thomas's Home*, and consequently the accounts of the Hospital proper do not apply to them.

(3) The division of the total number of Out-Patients in the General Hospitals into Casualties, Lying-in cases, and others is based on figures supplied by the Hospitals; but the varying proportions of casualties to others suggest that the definition of a casualty differs in different Hospitals.

(4) The *Hornsey Cottage Hospital*, the *Nelson Cottage Hospital*, South Wimbledon, the *Passmore Edwards Cottage Hospital*, Willesden, the *Passmore Edwards Cottage Hospital*, Wood Green, the *Wimbledon Cottage Hospital*, and the *Woolwich and Plumstead Cottage Hospital*, although having no general Out-Patients' Department, treat a small number of casualties, the cost of these cases being included in that of the In-patients.

(5) The *German Hospital*, having been closed during a great part of the year for structural alterations and repairs, and the number of occupied beds having consequently been considerably reduced, the figures for this hospital have been excluded from the various Tables of Group I.

(6) For similar reasons the figures of the *Wimbledon Cottage Hospital* and the *London Lock (Male) Hospital* have also been excluded from the various calculations.

(7) The cost per bed and per Out-Patient attendance at *St. George's Hospital* have not been taken into account in calculating the various averages of Group I.

(8) *Consumption Hospitals*:—The figures relating to the Country Branches of the *Hospital for Consumption* and the *Mount Vernon Hospital for Consumption* are not included in this Report.

(9) *Lying-in-Hospitals*:—The figures relating to the Training Schools of the various hospitals in this group are not included in this Report.

(10) The Expenditure on Salaries and Wages (Maintenance) at the *Italian Hospital* is not comparable with that at other hospitals, since the duties of nursing and dispensing are carried out by the Nursing Sisterhood of *St. Vincent de Paul*. This Hospital has therefore been omitted in the calculation of the average of Salaries and Wages in Group II., Table IV.

(11) The *Passmore Edwards Cottage Hospital*, Acton, includes £207. 7s. cost of District Nursing Institution, Invalid Kitchen, and Dispensary, in the Income and Expenditure Account, making the necessary deductions from the Statistical Tables of In-Patients and Out-Patients upon which the various Tables in this Report are based. This amount is not included in this Report.

(12) For the items included under the headings "Provisions," "Surgery and Dispensary," "Domestic," "Salaries and Wages (Maintenance)," "Management," &c., &c., see Appendix II. to the Report for 1908, or the Revised Uniform System of Hospital Accounts (see also Notes 14, 15 and 20 below).

(13) *Provisions.*—The Expenditure on Provisions, and on the other accounts which relate to the purchase of goods, is given without reference to stocks in hand, but taking one Hospital with another it is probable that the stocks do not vary very much from year to year. Were it otherwise, however, a considerable difference in the expenditure of different years might be expected.

Variations in the cost of Provisions may, in some cases, be partly accounted for by the arrangements made with officials who do not sleep on the premises or who provide their own board. Where similar officials take meals in the Hospital the cost of Provisions would be increased and Salaries and Wages presumably diminished.

The cost of Provisions may also be affected by the maintenance of private nursing establishments. The nurses, however, in some cases return to the wards after taking private cases, and during their attendance on such cases they, of course, do not board in the Hospital. (See also Note 17 below.)

(14) *Domestic.*—In order to facilitate comparisons between the Domestic Expenditure of Hospitals where the washing is done on hospital premises and those where it is put out, the cost of the laundry in the former cases under the headings of "Provisions," "Salaries," "Establishment Charges," and "Rent, Rates and Taxes," as shown in the washing returns published by these hospitals, has been transferred to the heading "Domestic." As the Tables in Sections I. and II. of this Report deal only with the figures of the Income and Expenditure Accounts, the charges in respect of Depreciation and Interest on Capital, which form part of the cost of washing as shown in the washing returns, are not included in the Domestic Expenditure. In the cases where the washing is put out the Domestic Expenditure includes, of course, the whole of the charges of the laundry companies. (See Section III. for comparison of cost of washing taken by itself, including the charges for depreciation and interest.)

(15) *Establishment and Salaries and Wages.*—Comparisons of cost in the separate Tables I. to V., and particularly in Salaries and Wages, are affected to some extent by the fact that at some hospitals articles are manufactured or works carried out by direct labour which at others are purchased or put out to contract. These differences in the separate tables cancel one another in the general Table VI.

In cases, however, where a considerable amount of "Establishment Renewals and Repairs" or "Annual Cleaning" is carried out by means of a special staff directly employed by the Hospital, the proportion of "Salaries and Wages (Maintenance)" returned as having been incurred in respect of these items has been transferred from "Salaries and Wages" to "Establishment." Otherwise injustice would result, since Establishment Charges are omitted from the Report as not being readily controllable from year to year.

(16) *Other Management Expenses.*—Tables V. of each Group show the Total Management Expenses divided into Official Salaries and Pensions, and other Management Expenses. The latter division only has been treated as an account which is controllable from year to year. The recipients of Salaries and Pensions cannot be dealt with from year to year on the same principles as affect ordinary market dealings.

(17) In some cases comparisons of cost are affected by the fact that at certain hospitals the patients are required, unless too poor, to provide certain articles of food. These are as follows: *London Homœopathic*—tea, butter and sugar; *London*—tea, butter and sugar; *Middlesex*, tea and sugar; *University College*, tea and sugar.

(18) The totals and general averages corresponding to the columns marked (a) in Section I., Table I., for the different groups of Hospitals, excluding those Hospitals that have been omitted for various reasons, are as follows:—

Group	Beds		Average number of days each patient was resident	Total new Out-patients	Total Attendances	Average number of Attendances per Out-patient
	Total	Average number in daily occupation				
I. Larger General ...	5,309	4,711.32	23.52	919,655	2,996,359	3.26
II. Smaller General ...	866	667.43	22.09	190,222	493,024	2.59
III. Consumption ...	703	645.5	64.19	25,709	123,332	4.99
IV. Hospitals for Women ...	275	260.2	23.30	20,914	80,383	3.86
V. Children's ...	688	601.33	25.49	116,168	363,258	3.13
VI. Ophthalmic ...	241	203.95	16.25	102,614	285,806	2.79

IX. Lying-in	320	226.16	14.37	8,822	99,577	11.29
Unclassified Hospitals ...	1,705	1,347.30	—	102,569	467,837	—
Totals	10,633	9,095.22	—	1,500,971	5,087,130	—

(19) The issue of these Reports was begun by Mr. J. Danvers Power with the figures of 16 Hospitals for 1903. But the earlier ones contained confidential matter, and the first Report published was that for 1908. A discussion of the objects and principles of the Reports may be found in the Prefatory Note to the latter.

(20) The Revised Uniform System of Hospital Accounts, on which all the figures in this Report are based, is fully explained in a pamphlet issued under that title by the King's Fund, the Metropolitan Hospital Sunday Fund, and the Hospital Saturday Fund, and published by G. Barber, 28 Furnival Street, Holborn, E.C. (2nd edition, February, 1909, price 1s. 3d. post free, with Supplement, July, 1912, price 6d.). The System was drawn up by the three Funds after reports on the subject by Mr. John G. Griffiths, F.C.A., and a committee of Hospital Secretaries.

NOTES PRINTED IN COURTESY TO THE HOSPITAL OFFICIALS BY WHOM THEY WERE
KINDLY SUPPLIED.

(21) *Belgrave Hospital for Children*.—"On July 1st, 1912, the Committee re-opened 8 cots, making 32 available for the reception of cases during the latter six months of the year, and after careful consideration it was decided to re-open the remaining 8 cots on April 2nd, 1913, and so utilise the whole of the cots in the Hospital."

(22) *Blackheath and Charlton Hospital*.—"The fare for the Patients and Nurses is of the best and on a most liberal scale, and there is no limit to the quantity they may consume. All provisions, including tea, sugar and butter, are supplied free to the Patients, and procured from the local tradespeople by written order from the Matron.

"Payments are taken from In-patients at the rate of 5s. for Adults and 2s. 6d. for Children per week, but necessitous cases are admitted free, and of these we have many."

(23) *Bolingbroke Hospital*.—"The cost of each In-patient per week has been reduced, and it is anticipated that a further considerable reduction will be made this year as the full twelve months' benefit of the contracts entered into for supplies of provisions, etc., will be known at the end of the year."

(24) *Charing Cross Hospital*.—"The Council beg to submit the following explanations to justify the increased expenditure shown in the year ending December 31st, 1912:

"Provisions.—The rise in the cost of Provisions was due to two causes: (a) the general rise in the price of supplies, (b) the larger consumption of supplies owing to the increase in the number of beds occupied.

"Surgery and Dispensary.—The increase under this heading is mostly due to the item 'Drugs, Chemicals, etc.' This again is due to the same causes as given above, viz. the increased prices the Hospital has had to pay and the larger consumption owing to the increased number of beds occupied. In addition to this, however, the Council would point out that during the past year a considerable number of new drugs have been brought into use and this has also materially helped to increase the total expenditure.

"Establishment (not included in the Statistical Report figures of cost).

"Salaries and Wages.—The increase shown here is due to two causes: Firstly the necessity of increasing the salaries of a number of the Hospital employees in order that they should have a living wage, and secondly to the Almoner's Department having been considerably increased to cope with the Casualty as well as the ordinary Out-patient Department, this latter being in agreement with the Report of the Special Committee recently issued by the King Edward's Fund.

"Finance (not included in the Statistical Report figures of cost)."

(25) *Finchley Cottage Hospital*.—"The Committee desire to call attention to the fact that in accordance with the wishes of the Distribution Committee of the King Edward's Hospital Fund expressed in their letter of December 20th, 1912, they have been successful in reducing the expenditure under practically every heading shown in the Income and Expenditure Account, and this in spite of a considerable larger number of Patients treated during the year. Thus the cost per patient treated to a conclusion has been reduced from £6 15s. to £5 5s. 6d.; the cost per patient per week from £1 15s. 9d. to £1 8s. 9d.; and the cost per bed occupied from £93 3s. 8d. to £80 3s. 6d. (i.e. including the items omitted in the Statistical Report)."

(26) *Kensington and Fulham General Hospital*.—"Owing to the disproportion of the number of beds as compared with the work of the Out-patients' department separate accounts of the actual expenditure have not been kept. The division of the expenditure is considered a fair one.

"The slightly reduced cost per bed and cost per Out-patient's attendance is entirely due to the increased average of beds occupied and larger number of attendances.

(27) *London Fever Hospital*.—"The cost per bed must necessarily be high in this Hospital for the following reasons among others.

"Infectious fevers are not constantly with us—their prevalence comes in waves—sometimes several in the course of a year. At one time there may not be more than 40 or 50

Patients in the Hospital, at another there will be 140 or 150 or even more. Hence for a part of the year many beds are vacant. A non-infectious hospital usually keeps its beds full all the year round. One of the size of the London Fever Hospital would probably pass 1,500 patients through its wards in a year, dividing its total cost by that number of patients.

"We have to be prepared at all times for a rush of Patients, and the standing charges (which include a seasoned nursing staff) are always the same. Our numbers of Patients vary from 600 to 800 yearly, which number, divided into the total expenditure, would show double the cost per head compared with the non-infectious hospital quoted above."

(28) *London Homœopathic Hospital*.—"A Ward of nine beds has been closed during the year for the want of Funds to maintain it.

"There was an increase in the number of occupied beds from 95 in 1911 to 126 in 1912, and a reduction of £3 6s. 2d. in the cost of each occupied bed.

"Nursing.—We have no paying probationers, therefore no 'Fee' to reduce nursing cost.

"There has to be a larger number of Nurses on the Staff than in Hospitals with Medical Schools. The Nurses of the Hospital do the work (dressings, etc.) done by Students in Hospitals with Medical Schools.

"The Hospital does not employ Ward Maids, the work being done by Scrubbers. The amount is included under Domestic Wages, instead of Nursing, making Domestic Expenses higher.

"Domestic Wages.—Include Scrubbers' Wages.

"All the male servants are not boarded at the Hospital, but are paid extra wages in lieu of food: therefore Domestic Wages are more, Provisions less.

"Provisions.—The Patients' and Nurses' fare is of the best and on a most liberal scale, there being no limit to the amount they may consume."

(29) *Metropolitan Hospital*.—"In connection with Provisions, the Committee desire to point out that the Patients are provided with Tea, Butter, and Sugar, and that special food has to be prepared for Jewish Patients, which necessitates the employment of an Extra Cook and expense of an additional Kitchen. All Employees, with the exception of Clerks, Dispensers, and Porters, are boarded at the Hospital.

"Teaching is confined to the Nurses at this Hospital, and the proportion of Nurses on the Staff is large. Nurses do the work, dressings, etc., usually done by Students in the Hospitals with Medical Schools attached. This is much to the advantage of the Nurses; but necessitates the appointment of not less than six residents.

"The whole Hospital was painted in 1912, and this necessitated the closing of each floor for about 8 weeks at a time."

(30) *Paddington Green Children's Hospital*.—"In-patient Department. *Re Milk*.—The Medical Committee of this Hospital being of opinion that the supply of Milk for Patients in the Wards should continue to be obtained from the Walker-Gordon Laboratories, the extra cost of milk, due to this fact, in 1912 was £97 2s. 6d.

"Out-Patient Department. *Cost of each Out-Patient Attendance*.—The supplies of medicines, surgical dressings, etc., given to Out-patients were as follows:

Supply for 7 days	16,964	=	16,964
" 14 "	17,848	=	35,696
" 21 "	3,504	=	10,512
" 28 "	1,236	=	4,944
	39,552	=	63,116 weekly supplies.

Advice and treatment 7,253

Total attendances as registered 46,810

(31) *Poplar Hospital*.—"In regard to the cost of Out-patients, it should be noted that we do not make any Patients coming to the Casualty Department *Medical* Out-patients. Our Out-patient Department, as distinguished from the Casualty Department, treats *Surgical* Out-patients only."

(32) *Prince of Wales's General Hospital*.—"Owing to the general rise in provisions and Hospital requisites the cost of maintenance is higher. The same difficulty of obtaining Resident Medical Officers has again been experienced, so that nearly the whole year a locum has been in residence. The Nursing Staff has also been increased."

(88) *Queen's Hospital for Children*.—"There was an increase of 2s. 9d. in the average cost per In-patient per week.

"This was mainly due to:

"1. The expenses of re-painting wards and corridors, which amounted to about £800, including wages and architect's commission, entered under 'other Officers' and 'Mechanics, etc.' (Salaries, Wages, etc.)

"2. The drop of two in the average of daily occupied beds consequent upon the closing of wards for painting.

"3. Increased expenditure under the heading of Surgery and Dispensary due to (a) increased work in the Pathological Department, (b) increased cost of upkeep of X-Rays Department, (c) increased consumption of dressings, etc., and (d) renewal of stock of instruments.

"4. Increases in Salaries and Wages, chiefly in the cases of the Nursing and Domestic Staffs.

"The Committee have reason to expect that the proportional cost will be reduced to a more normal figure in the present year owing to the absence of heavy expenditure on redecoration, &c."

(84) *Royal Eye Hospital*.—"Cost per bed.—The average weekly cost of an In-patient is £1 6s., but it should be taken into consideration that the average cost is high because it includes the cost of provisions for *paying* patients. During 1912 there were 68 of these patients—representing 742 days, an average residence of nearly 12 days each. For these patients the Hospital received £409 18s. The diet given to these patients is of a more varied and expensive nature than that of the ordinary In-patient—therefore the actual cost of the latter is less than £1 6s. per week."

(85) *Royal Hospital for Diseases of the Chest*.—"Establishment.—The Expenditure under 'Renewals and Repairs' includes a sum of £98 for the provision of a new Boiler and for further improvements to the hot water arrangements. (Not included in the Statistical Report figures of cost.)

"Salaries, Wages, &c.—Under the sub-heading 'Medical' is included an amount of £276 1s. 2d., being honoraria paid to the members of the Medical Staff.

"The Chaplain now receives an honorarium of £40.

"The enlargement of the Out-patient Department has necessitated the engagement of an additional Sister, Nurse, and Scrubber.

"Beds (80) During the re-building of the Out-patient Department the Beatrice Ward was closed for four months and temporarily adapted as an Out-patient Department.

"Each of the 3 Wards was also closed for a fortnight for cleaning purposes."

(86) *Royal National Orthopaedic Hospital*.—"The number of beds was increased in June 1912 from 184 to 180."

(87) *St. George's Hospital*.—"Strict supervision has been exercised over the expenditure of each Department compatible with the proper treatment of Patients.

"All provisions, including tea, sugar, and butter, are supplied to the Patients quite free.

"When Patients are unable to get their personal washing done, the Hospital has it done for them."

(38) *St. Mary's Hospital, Paddington*.—"Extract from the Annual Report for the year 1912:—". . . The charges for the year, for various reasons, over some of which the Board had no control, were abnormally heavy. The total 'Ordinary Expenditure' reached £30,878, or £1,351 in excess of that for 1911. The chief causes controllable by the Board were (a) the renewal of the furniture of the Casualty Department and the quarters of the Resident Medical Officers . . . ; (b) an urgently necessary increase in the salaries of the officers of the Pathological Department . . . and the addition . . . of a Second Casualty House Surgeon; . . . an increase of £134 in Nurses' salaries; . . . (c) exceptionally heavy outlays for Renewals and Repairs (not included in the Statistical Report figures of cost) . . . and (d) £75 law expenses attending the Petition for a Royal Charter.

"The causes over which the Board had no control were (a) a general increase of prices affecting nearly every item of expenditure; . . . (b) Rates and Taxes, £28 above 1911, owing

to the raising of the Rateable Value of the Hospital (not included in the Statistical Report figures of cost); (c) Employers' Contributions under the National Insurance Act, 1911, £68 4s.

"The combined effect of increased expenditure and a decrease in the number of Patients and therefore in the average number resident daily throughout the year, is a great rise in the average cost of In-patients per head and per week.

"For several years these average costs have steadily declined, and the position of St. Mary's in relation to other London General Hospitals in the Statistical Tables issued by King Edward's Hospital Fund has been well below the average. This year the average cost of each In-patient has risen at one bound from £5 2s. 11d. to £5 19s. 3d. and of each In-patient per week from £1 12s. 7d. to £1 17s. 2d. So far as this rise in average costs is the result of increased prices there is nothing to be said as this cause must have affected all Hospitals. But it is largely caused by the falling off in the number of Patients, resulting from the enforced closing for the greater part of the year of two of our largest medical wards. This, while producing little effect on the general expenditure of the Hospital (for no head of expenditure can be proportionately diminished by a temporary closing of beds and many cannot be affected at all) has seriously reduced the number of individuals over whom this expenditure is divided to produce the average. It is obvious that averages thus disturbed are, in the absence of explanation, misleading, and these observations are therefore made. It is also clear that the figures for 1912 are not fairly comparable with those of other years. . . ."

(99) *St. Mary's Hospital for Women and Children, Plaistow*.—"Re Washing Return.—A fixed charge is made for the various members of the Staff, and a record of the number of pieces sent by them during 1912 was not kept.

Staff Washing cost	£180	8	9
Patients' washing, average 614 articles weekly, cost	£92	14	11
	£223	8	8

(40) *University College Hospital*.—"There was a rise in the prices of Provisions and Coal during the year which accounts for an increase under these headings."

(41) *Victoria Hospital for Children*.—"I would point out that although the daily number of Patients resident in 1912, i.e. 92, was the same as in 1911, the number of Patients admitted was 250 less; consequently the average cost of each In-patient has increased, also the average time each Patient was resident.

"The appointment of a second paid Anesthetist and an increase in the Radiographer's salary are responsible for the increase in Salaries and Wages.

"The expenditure of £239 on painting the exterior of the Hospital carried a large increase in Establishment charges (not included in the Statistical Report figures of cost)."

(42) *Woolwich and Plumstead Cottage Hospital*.—"As the present Committee and Honorary Officers only came into power on the 1st June, 1912, they had no control over the expenditure for the first six months of the year and consequently the figures do not show any very appreciable saving on the previous year. The Committee, however, are satisfied that a very substantial saving will be shown in the year 1918."
